

WEATHER & SEASONS

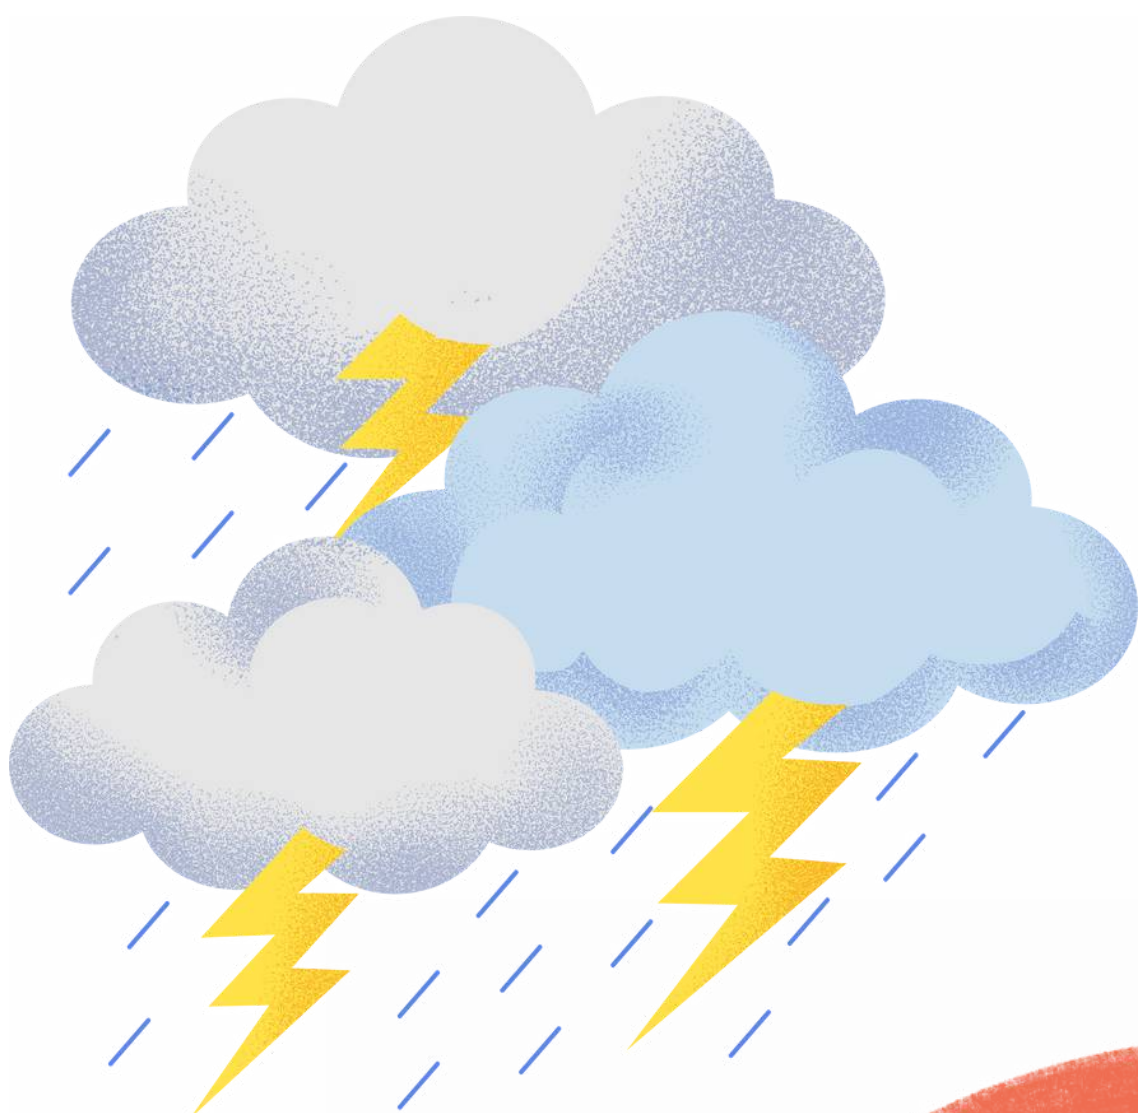

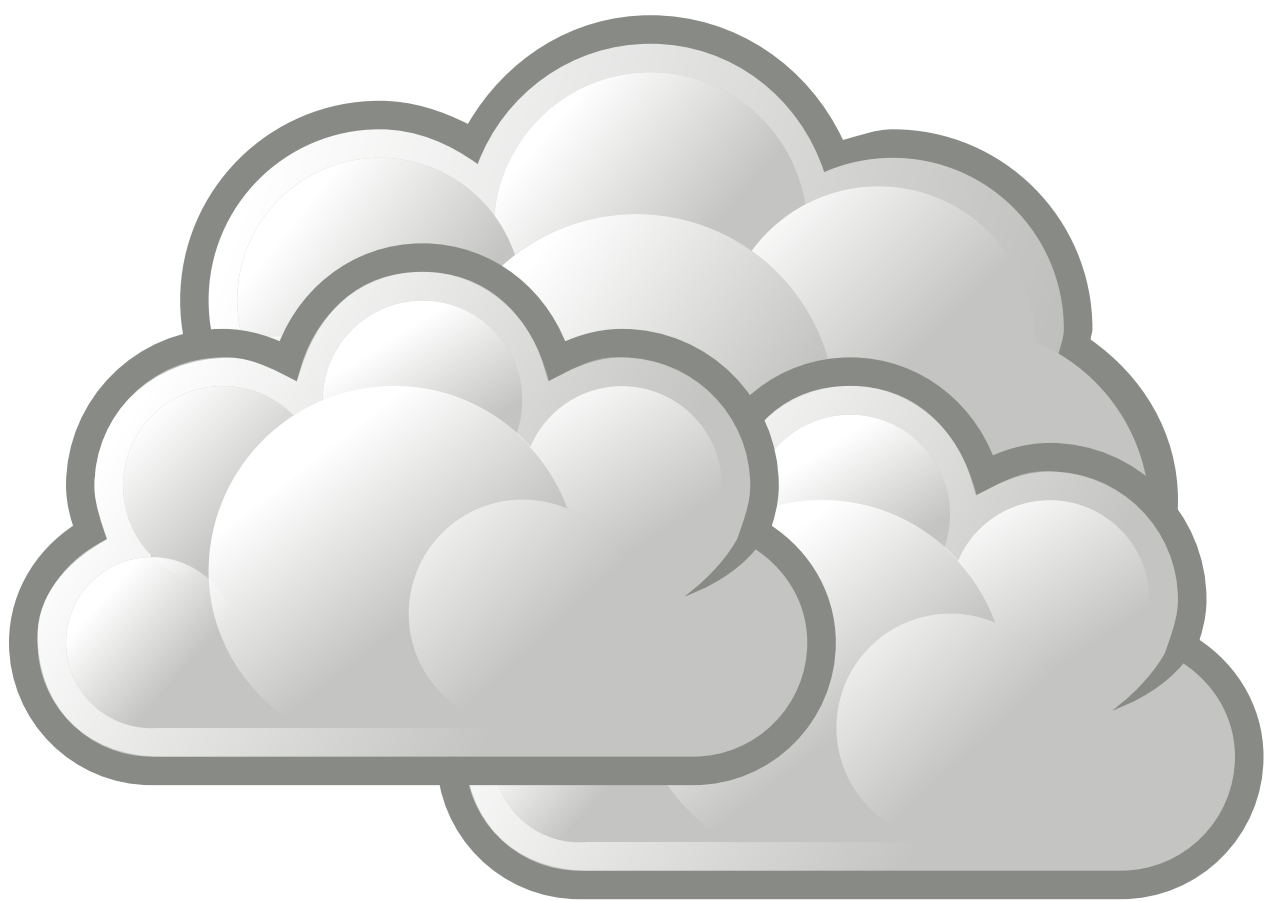

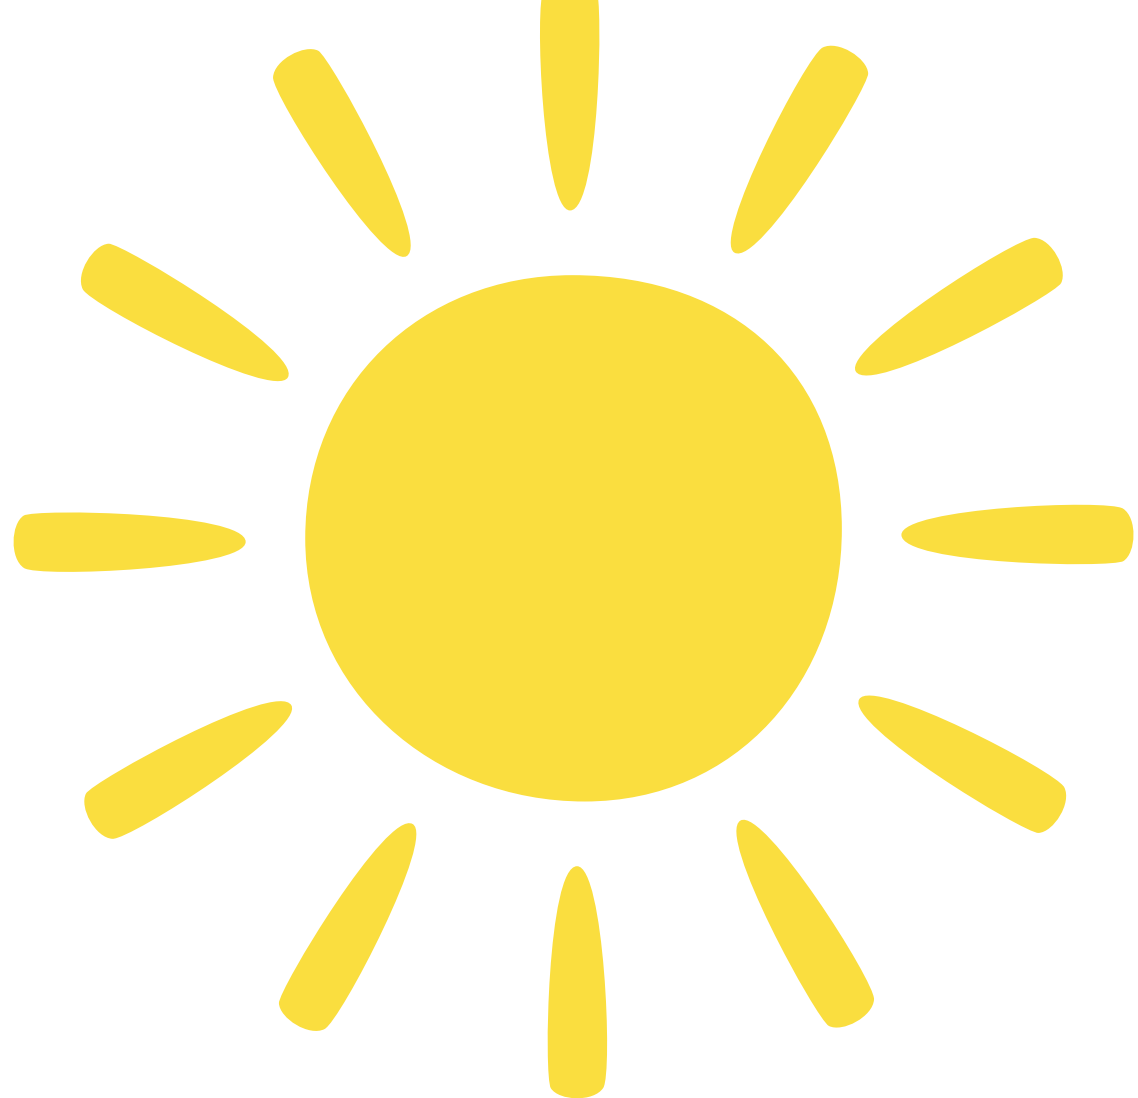

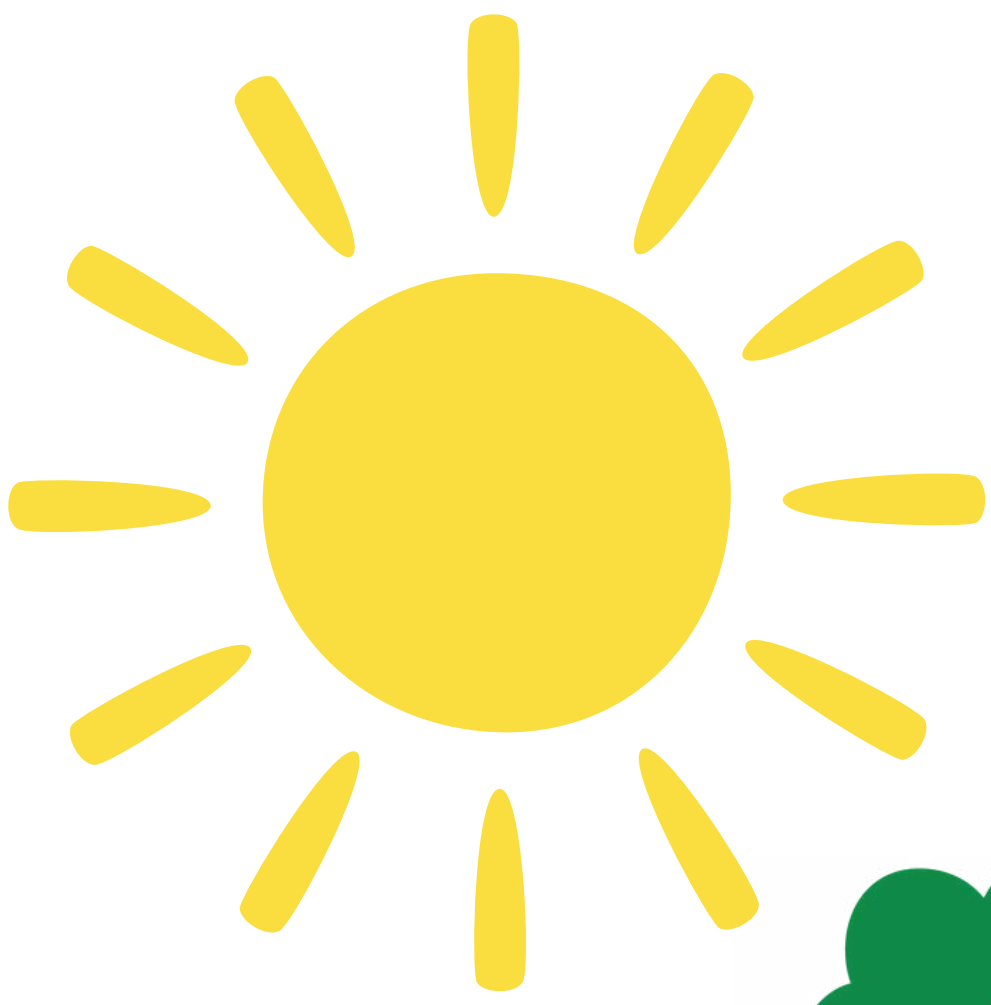

MILLION WORD GAP PROJECT

Understanding weather and season vocabulary is an important part of a child's development. It helps them make sense of the world around them and build a stronger connection to nature. Knowing words like 'rainy,' 'sunny,' 'cold,' 'warm,' 'winter,' and 'summer' not only boosts their language skills but also enhances their ability to observe and describe their environment. As you read today's story, encourage your child to recognize and talk about the weather and seasons in the story, linking it to their own experiences. This kind of vocabulary helps children develop both their communication skills and their understanding of time, change, and nature.
