

Business Network Assessment

The most comprehensive IT Assessment. The network assessment module gives you the broadest insights of any IT assessment module. 100% completely non-intrusive.

Some of the highlights are:

Client Risk Report

- Overall risk score
- Issues Summary
- Internet test summary
- Assessment summary
- Server aging
- Workstation aging

Network Full Detail Report

- Assessment summary
- Domains and all domain break downs
- Non A/D devices
- Servers and breakdown of all servers
- Printers
- Network Shares
- List of all major applications and scan for destructive apps
- System Password Strength assessment
- OS Patch summary
- End Point Security and Backup
- Remote listening ports
- Internet access
- External Speed test
- Internet Domain
- External security vulnerabilities
- Complete detail of all computers

Network Assessment Power Point

- High level overview of Environment
- Risk and Issues
- Issue review
- Next Steps

Site Diagram

- Visual diagram of network layout
- Workstation layout
- Listing of all printers and devices

Asset Detail Report

- Detail risk and assessment for each asset in the network

Excel Analysis Export Report

- Up to 45 tabs in Excel format of all Asset details and reporting
-

Security Risk Report

This report includes a proprietary Security Risk Score and chart showing the relative health (on a scale of 1 to 10) of the network security, along with a summary of the number of computers with issues.

Computer Security Report Card

The Computer Security Report Card assesses individual computers based on security criteria. Devices discovered on the network are assigned an overall score, as well as a specific score for each of the assessment categories detailed in the report card.

External Vulnerabilities Scan Detail Report

A comprehensive output including security holes and warnings, informational items that can help make better network security decisions, plus a full NMap Scan which checks all 65,535 ports and reports which are open. This is an essential item for many standard security compliance reports.

Data Breach Liability Report

Identifies specific and detailed instances of personal identifiable information (PII) and cardholder data throughout a computer network that could be the target of hackers and malicious insiders. It also calculates the potential monetary liability and exposure based upon industry published research.
