

Station 42 — Monthly Call Volume (Past 12 Months)

Summary

Station 42 averages approximately 27 calls per month. Peaks in May–June 2025 (31–34 calls) indicate natural seasonal strain even without major events. This steady workload shows the station is already near operational capacity year-round.

Why Festivals Create Strain

Large multi-day events (5,000–10,000 attendees) can double or triple call volume in 48 hours. Most of these are medical in nature—dehydration, falls, respiratory distress—drawing crews away from residential emergencies and delaying response times across the district.
