

# DONALD MCKAY K-8 SCHOOL

## Student Support Team

The McKay uses **data based decision making** to identify students who require additional supports. **The Student Support Team (SST)** reviews school-wide data related to both **academics** (e.g. reading and math) and **behavior** (attendance, social emotional functioning, and behavior) to match students with appropriate learning supports and interventions.

In addition to matching students with **interventions**, the SST identifies a process for collecting data to **progress monitor** whether or not interventions are working. The team identifies a schedule for following up multiple times to ensure that **data is reviewed** and changes are made as necessary to the intervention plan.

When school teams use student **data** to plan & monitor **instruction**, student outcomes improve.

Measurable results:  
Improvement on all 5 BIMAS scales!

- Conduct**
- Negative Affect**
- Cognitive/attention**
- Social**
- Academic Functioning**
