

SUMNER ELEMENTARY

Universal Screening

Universal screening is completed for all students at the Sumner Elementary using the BIMAS to help the school team understand student strengths and needs. Teachers complete a brief (34 item) rating scale for each student to identify social emotional strengths and areas of need.

This data is used to understand systemic needs across students in the school. Together, this data is used to plan **core instruction** provided to all students and to make decisions about which students are in need of targeted skill instruction.

Universal screening data can be used effectively at the **elementary school level** to integrate academics and social emotional learning opportunities throughout the day.
