Have you struggled with an outdated or unreliable water control system? SiteLinx Water offers an **end-to-end solution** that provides 24/7 monitoring and control for your water/wastewater system, from standalone sites to entire municipalities. Your new system will:

- minimize the need for routine in-person site visits with **real-time monitoring and controls** accessible from practically anywhere
- include pre-engineered control panels built in our **UL508A shop**, located within the greater Phoenix area
- come equipped with necessary hardware and sensors to capture and communicate **critical** information

With 20+ years in the water industry, our engineers are well-equipped to handle all of your water and wastewater needs. Each control panel is hand-crafted and designed specifically to **save you time and money**. Additionally, with further environmental regulations looming, we will ensure you have the essential tools needed to remain **compliant** with all governing bodies.

Revolutionize Your Water System

Also included with your control panels, is a customizable cloud-hosted dashboard. Your personalized dashboard will be **flexible, reliable, and easy-to-use**. Your new water system will require **NO SOFTWARE DOWNLOADS** and can be accessed on **any internet-capable** mobile device, tablet, PC, etc. Simply scan your easy-to-use QR code, input your unique credentials and control/monitor your water system from anywhere, at anytime.

Discover the Future of Water Management

Ultra Reliable!
Accessible cloud, local,
and manual controls

Peace of Mind!
SMS/email notifications
whenever outages or
anomalies occur
