

## High-Performance Energy Recovery

Introduced in 2009, the Canadian-designed and Canadian-built Kanaire BTR 150 sets the standard for efficient ventilation in multifamily buildings. Today, the BTR Series is recognized as the most reliable, most robust energy recovery ventilator for this application — with the smallest footprint and slimmest profile available.

Proven in over 20,000 successful installations across Canada's most prestigious low-, mid-, and high-rise residential towers.

Now, meeting demand for even higher thermal efficiency and lower operating cost without sacrificing reliability or compact size, we proudly introduce the new **BTRE-150 EPIC**.

Highest sensible efficiency: 89% Lowest running power: only 12 watts Total flexibility with multiple constant-volume and high-speed options.
