

# RejuvePod After Care

---

## ORGANIC SPRAY TAN

**Regular Solution** Wait 8-12 HOURS to rinse off. Longer the better. This helps the tan fully develop. Do not exceed more than 24 hours.

**Ultra Solution (Upgrade)** Wait 2 hours for light, 3 hours for medium, 4 hours for dark to rinse. We do NOT recommend waiting longer than 4 hours as you risk your tan looking unnatural.

- With Ultra, you will not have much color after your first shower, the Ultra tan develops 6 hours after you rinse off.

- Do not swim or workout until after your first shower. Avoid all contact with water prior to your first shower. This prevents streaks and drip marks.
- Just rinse off in your first shower. The bronzer will wash off and show in the tub. DON'T PANIC! This is normal. Your tan is not washing away.
- In your next shower, use soap in your hands only. No loofas, washcloths, or sponges. Wait 24 hours after your first shower to shave.
- Pat your skin or air dry after showers.
- Moisturize as soon as you are done showering. Moisturizing helps your tan last longer, look healthy, and appear more natural. Try to moisturize twice a day for best results.

**Sjolie Tan Extender works BEST.** Other lotions may cause uneven fading or discoloration. Use 1-2 times a day. The tanning agent will develop 2-3 hours after applying to the skin. Wait 8 hours between applications. Wash hands after use.

### **\*\*\* DON'T FORGET YOUR HANDS & FEET \*\*\***

- Wash the palms of your hands and bottoms of your feet with soap and water. Pat dry. About 1 hour after your tan for regular solution, 30 minutes for Ultra solution.
