

PAYCO POS Network Diagram

The internet requirements for your POS installation are as follows:
 -A broadband internet account must be established prior to the POS installation.
 -Proper internet connectivity equipment must be purchased and installed ahead of your installation.
 -Cabling must be run from your internet connection to the different terminals, printers, and Access Points.
 -If the ISP modem is configured as DHCP, there is no extra information needed. However, if your modem is configured with static IP addresses, you will need to provide the following information to your technician prior to your installation day: static IP address for POS, default gateway, subnet mask, DNS 1, and DNS 2.

*Structure, Components, Stations, Handhelds and types of Printers will vary based on type and size of Restaurant/Retail Venue
