

1. On the sketch, select a room.
2. Click the **Room Properties**  icon to open the Room Properties dialog box.
3. In the **Ceiling** group, in the Ceiling Type box, select **Sloped, Peaked or Tray**.
4. Enter the ceiling and wall measurements.
5. Click the sketch to close the Room Properties dialog box. A blue line, representing the position of the peak, appears on the sketch.
6. To change the position of the peak on a sloped or peaked ceiling:
7. Click **Orientation**.
8. Point to the room. A red arrow appears.
9. Position the arrow in the direction to which you want to change the peak, and then click the room.
10. When you add line items using the ceiling and wall (C) (W) variables, items are automatically calculated to account for the slope, peak or tray.
