

How do I sketch a flared staircase?

1. Add a staircase in sketch
2. Click **Vertex** . The icon shows a red diamond at the vertex of two lines.
3. Click one wall of the staircase to add a pivot point, and then drag the red diamond at the bottom of the staircase out to create an angle.
4. Select the angled wall, and then click the **Properties** icon to open the Staircase Properties window.
5. In the General group, set Arced Wall to **Yes**.
6. Click the blue square on the angled wall, and then drag the wall to create an arc.
7. Add an angle and arc to the opposite wall to finish the flared staircase.
