

**MOR- A.I. Driven Integration Software**

MOR's approach to identifying your parts/items is designed to help the end user clearly understand what they are looking at

## MOR- Identifying your Parts/Items

What's important?

- many users view and work with items in the system
- only a few users add or maintain items in the system

How items are displayed is key to ease of use

primary users must understand

ITEM I.D.  
(could be drawing #,  
supplied part # or  
unique description e.g.  
'A12AMP')

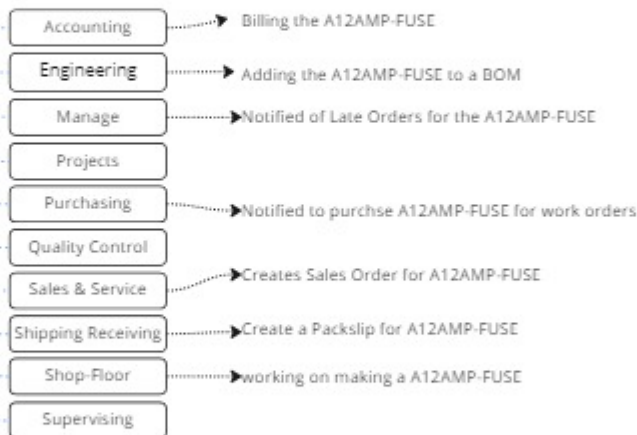

ITEM TYPE  
(what the actual item is...  
e.g. Kettle, light fixture,  
FUSE, car etc)

LINKED TOGETHER to create what Users See

User's with access  
to the PARTS  
MAINTENANCE  
form can modify if  
required.

A12AMP-FUSE

what  
users are  
working  
with

**\*\*Note\*\***

MOR supports multiple ways of defining your items. Internal part i.d.'s or a system key can be used.  
A user that will add or maintain items in the system must understand the importance of defining items and the many tools available to them.
