A Life-Saving Extension at Gaza's Most Vital Hospital

Once the beating heart of Gaza's healthcare system, Al-Shifa Hospital now stands in ruins.

Other major hospitals, including Indonesian, Al-Awda, and Kamal Adwan, have been shut down due to targeted attacks and repeated siege conditions.

The situation is critical. Al-Shifa is at 200–300% capacity. Patients are being treated on floors, in hallways, and in tents.

Children and the wounded are being turned away due to lack of space.

We are launching a project focused entirely on building the hospital structure needed to bring healthcare back to this region.
