COMPOSITE PRESSURE VESSEL

ENDORSED BY

FLUID TREATMENT, INC.
Solutions for economical clean water.™

The **PATENTED ENPRESS Vortech™** and **Mid-Vortech™** distribution technologies are revolutionizing the water treatment industry. The design creates fluidity of the media bed and extends contaminant removal capacity; which means less regenerations and significant reduction of water use...saving water, salt and the environment, with backwash flow rate reductions of at least 30%. So it's easier to go green and save green at the same time.

- Up to 30% less backwash flow rate is required... conserving water for the consumer
- High flow design maximizes today's high efficiency valve technology
- Permanent attachment of dip tube to distributor, so when servicing a valve, distributor stays in place, no more re-bedding
- Vortech distributor plate is designed for over 6,500 lbs. Load capacity
- Most efficient softening regeneration, reducing salt consumption
- Self-cleaning nozzle design eliminates potential clogging and build-up
- Available for 9", 10", 12", and 13" tanks; adapters for 1" and 1-1/4" valves
- Increase in softening capacity due to improved flow through media
- No channeling of media, providing a cleaner more efficient system
- Environmentally friendly, reduction in required backwash times due to improved bed lift and mixing... at lower flow rates
