Kings Avenue Shopping Mall Paphos

Unrivalled Quality Installations

The Passive Fire Protection market in Europe is growing fast, and the European industry requires a Fire Protection company which have the experience and technical expertise to give the right advice on products and applications. **FTI** provides this, and is backed up by unrivalled quality installations, service and delivery in the UK, Spain, Germany and Cyprus.

2024 marked our 35th year in the Passive Fire Protection Industry and our unique ‘one stop shop’ provides the client with design, specification, supply, installation, inspections & certification. We provide everything needed to get the job done, from fire protection of steel structures, smoke extract ducts, fire walls, fire ceilings, fire curtains, fire barriers and fire stopping to service penetrations through floors and walls, plus any other fire protection requirements that may be needed.

As well as fire protection, we also install roof membranes and insulation with our UK qualified hot welding operatives.

Qualified Assessors & Installers

FTI has both NVQ/City&Guilds & European Qualified Fire Protection Assessors and Installers, the only company that can offer this to the Cyprus Passive Fire Protection Industry, we are also members of the Fire Protection Association (FPA).

We were the first fully qualified Passive Fire Protection installation company in the UK and Cyprus. We are proud of our history and achievements since 1989 and continue to strive for excellence and quality, providing real value for money for our clients.

In 1999, **FTI** instigated the development of the Passive Fire Protection NVQ/City&Guilds Qualification in partnership with the UK Government body, the CITB (Construction Industry Training Board). We brought together installers, manufacturers and associations such as the ASFP and FIRAS, to form the Government Occupational Working Group.

In 2001, **FTI**.was employed by the UK’s CITB to run the NVQ/City&Guilds pilot scheme in partnership with Crawley College near Gatwick Airport. Mr Phivos Andreas Petrou (**FTI** founder} and his brother Mario Petrou, became the first Passive Fire Protection Assessors in the UK. The pilot scheme run by **FTI**. was a success and the qualification went live in 2003.

THOK - Cyprus National Theatre

O2 Arena London (Millennium Dome)

Gatwick Airport Pier 6

flexible systems for every situation

FTI provides total project solutions

Product range and certification

We are not tied to any manufacturer or agent, therefore we can offer an extensive range of Fire Protection materials from various manufacturers, which are designed for ultimate speed of application, providing simple and economical fire protection solutions.

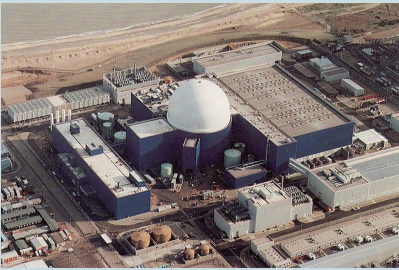

All products are BS, EN and ETA approved and have Warrington Certifire Certification which is recognised by the Regulatory Authorities and Fire Departments.

Final certificate of conformity upon completion

At the completion stage of any project, **FTI** will issue a Certificate of Conformity with all technical back up. This document is accepted by the relevant authorities and gives the client peace of mind, knowing that the building has been properly fire protected by a competent, expert and qualified company.

University of Central Lancashire - Cyprus

Sizewell b Nuclear Power Station UK

‘the art of passive fire protection since 1989’
