

Product: Can-Am Universal Rear License Plate Light Kit

Disclaimer: Please disconnect your battery and make sure key is in the off position before installing the product.

Instructions:

- Once you have your license plate in the location that you want, find a mounting location above the plate and drill a 7/16" hole for mounting the light.
- Remove the locking ring/nut from the backside of the light and down off the wires. Insert the wires into the mounting hole then put the locking ring/nut back down the wires and screw it back onto the backside of the light.
- The power for the plate light comes from the tail light. Run the wires from the light up and to the tail light area. Use the supplied zip ties and mounting tabs if needed. In areas of higher heat wrap the wires in the supplied heat tape to protect them. Run the wires in the frame as needed to protect them.
- Access the plug on the tail light. (This will depend on your machine)
- Unplug the wire going to the tail light and plug it into the supplied harness, then plug the other end of the harness back into the tail light.
- Then connect the smaller plug to the license plate light
- Once your power is reconnected turn on your key and verify proper operation of the light.

Thank you for your purchase.
