

Motion for Life has the purpose of developing motion control technology for interfaces in software, products, and education to create a better quality of life that is universal and meets needs of people with disabilities.

The focus was on products, but now is on software. The New Project will be to bring the Word to Life. Because of this focus, the name, Motion for Life, will be changed to Word to Life.

There is a new Board, and the Motion Control Technologies will be used from Quantum Interface LLC, quantuminterface.com, with Jonathan Josephson.

The motion controlled light and faucet was one of the projects exhibited in the Edit Technology Exhibit in Canada 2018, See video
