

CROWN GREEN BOWL DENSITY

LOW density

A low density bowl is **larger in size** than a standard density bowl of the same weight.

They **run longer** compared with a standard bowl.

Suited to **heavier, slow or wet** greens.

STANDARD density

As a general rule most bowlers use standard density bowls as these are **a good all round bowl**.

HIGH density

A high density bowl is **smaller in size** than a standard density bowl of the same weight.

A high density bowl will tend to **pull up quicker** than a standard bowl.

Suited to **fast, dry** greens.
