

# DataSheet

This demineralised water fire extinguisher is for use on Class A fires – those involving flammable solids, including paper, wood and textiles. A wholly water-based fire extinguisher, however, comes with a strict warning that it shouldn't be used on electrical fires. That's because water can act as a conductor of electricity and so it's extremely dangerous. A water fire extinguisher should never be used on Class B (involving flammable liquids), Class C (flammable gases) or Class F (cooking oil and grease) fires either.

## COMMANDER EDGE

### WATER FIRE EXTINGUISHERS

Water fire extinguishers work by having a cooling effect, lowering the temperature of the fire when sprayed on it. Hospitals, schools and offices would benefit from having a water extinguisher on site as well as warehouses and storage units.

Technical Specification	WS6E
Capacity	6 litre
Fire Rating	13A
Extinguishing Medium	Demineralised water
Working Pressure	15 bar at temp 20°C
Temperature Range	+5-+60°C
Cylinder Material	Steel
Pressuring Gas	Nitrogen

**PRODUCT CODE**  
WS6E

**PRODUCT GROUP**  
CommanderEDGE Extinguishers

**DIMENSIONS (mm)** (height x width x diameter)  
502 x 197 x 160

**WEIGHT**  
9.9kg

- Fully CE marked
- Plastic base for protection
- Corrosion-resistant finish
- Polyethylene internal lining
- Brass spray nozzle
- Manufactured in Europe
