Day Six: Feedback Is Instructions

Day Six focuses on how to interpret response without panic or overcorrection. This guide teaches how to use feedback as information instead of judgment.

By this point, something real has been shared. A message, an idea, or a small test offer has entered the world. Response begins to show up in different forms.

Feedback is not a verdict. It is data that helps refine direction without starting over.

What Different Responses Mean

Questions indicate interest and a need for clarity. Hesitation suggests you are close but refinement is needed. Silence often points to unclear messaging, not failure. Strong reactions from even one person signal alignment.

How to Use Feedback

Focus on small adjustments instead of rebuilding. Clarify the outcome, simplify language, or tighten the message.

Day Six Core Prompt

Based on the response I received, what part of my message was clear, what part caused confusion, and what part sparked interest? What is the smallest adjustment I can make to improve clarity without changing the core idea?

Progress comes from listening and adjusting, not restarting. Feedback guides movement forward.
