\$180

JellyFlutter - Dreamweaver
Yarn, faux fur, fuzzy duster
40" x 5" x 5"
\$140

JellyFlutter - Dark Night of The Soul

Yarn, faux fur, fuzzy duster

76" x 5" x 5"

\$140

GRAVITOSPHERE

HELIXANOMA

(THE JUNGLE

STALACTITES)

The Gravitospore Helixanima (Jungle Stalactites)

Behold the Gravitospore Helixanima, the suspended sentinel of the Eternal Jungle. This gentle being dances across the skies, looping and coiling in an ongoing performance of grace and tranquility, a silent ode to the hidden blueprint of life.

Body: Like a DNA strand adrift in a petri dish of stardust, it spirals with grace and precision, its serpentine body studded with tiny spiky spores that hang delicately in the low gravity environment. Bathed in a glowing halo of ethereal luminescence, the Helixanima's jelly-like world is a slow-motion ballet of celestial bodies.

Communication: The Helixanima's preferred form of communication is through light pulses emitted from its spore tips. These pulses modulate in a rhythmic pattern resembling a binary code, allowing the Helixanima to engage in complex dialogues with its companions and the flora and fauna beneath it.

Social Preferences: The Gravitospore Helixanima naturally form "gravitational gatherings," akin to terrestrial herds. These assemblies move as one, driven by a shared consciousness that amplifies their capabilities. Their group dynamics not only ensure safety but also create a captivating dance of synchronized spirals in the heart of the Eternal Jungle.

Energy Consumption: The Helixanima absorbs energy not through consumption of physical matter, but through absorbing cosmic radiation, a testament to its alien-like existence. Its twisted helical body acts as an antenna, drawing in ambient particles and converting them into the sustenance it needs to survive.

Mating: As the Helixanima loops and twists in the sky, the creature emits an array of spores that float downwards and, upon reaching the ground, give rise to infant Helixanimas that rise up to join their parent in the sky.

Superpower: The Helixanima is its inherent ability to influence gravity. Its DNA-like structure allows it to bend and twist the laws of physics within its immediate environment, creating a localized low-gravity zone around it. This ability gives the Helixanima unparalleled control over its movements, creating an illusion of effortless elegance that is nothing short of mesmerizing. A celestial artist painting with light and gravity, the Gravitospore Helixanima is a truly magnificent marvel of the Eternal Jungle.

Welcome to a world where life dances in zero gravity, and DNA spirals loop to the beat of the cosmos. Be careful, though; the tempting, spiky spores aren't simply ornamental. They are repositories of this creature's essence, waiting to find a new host for propagation. Be mindful not to disrupt the gentle creature's tranquil rhythm as you navigate through the low-gravity environment of the jellylike world.

Gravitospore Helixanima - Gravity's Embrace

Resin, acrylic, epoxy, paper clay, faux foliage, faux fur

96" x 15" x 11"
