

EMERGENCY SHELTER RESPONSE

A COSBY FAMILY
PRESERVATION
INITIATIVE

Introduction of Cosby Family Preservations Foundation: Stabilizing Families Through Global Housing Solutions

I am honored to introduce the **Cosby Family Preservations Foundation**, a dedicated initiative that partners with businesses and individuals to stabilize families by providing global housing solutions. As part of this mission, we have aligned with **360 Construction** to address the critical need for immediate and sustainable housing through innovative solutions.

360 Construction employs its proprietary Hi-Build Technology to deliver emergency housing structures made from advanced, non-toxic materials that are fire-retardant, water-resistant, and eco-friendly. These solutions are supported by grants, making them accessible and scalable for needy communities. Our offerings include collapsible and fixed structures, ensuring we can respond promptly to emergencies while providing sustainable, long-term housing options.

GRANTS

FUNDED BY PRIVATE INVESTORS COLLABORATING WITH PROJECT COSBY FAMILY PRESERVATION FOUNDATION, WHOSE MISSION IS TO SUSTAIN FAMILIES

A Comprehensive Initiative to Stabilize Families

- Through the partnership between **Cosby Family Preservations Foundation**, **Mov2Liv**, a provider of essential housing grants, investors and others we have developed a robust initiative designed to:
- Offer both temporary and permanent housing solutions to families in need.
- Provide emergency shelter and hotel accommodations to displaced individuals and communities.
- Foster stability and self-sufficiency for elderly families, children, and individuals with disabilities.
- We are driven by the belief that every family deserves access to safe, secure, and sustainable housing. This initiative represents a bold step forward in ensuring families survive and thrive, even in challenging circumstances.
- We invite you to join us in this mission to stabilize and empower families globally. I would be delighted to discuss collaborating to create a meaningful, lasting impact. Don't hesitate to contact me at [phone number] or [email address] to explore potential partnership opportunities.
- Thank you for your time and consideration. We can transform lives by providing hope, stability, and a secure foundation for families worldwide.

- **Transport:** Designed for convenient mobility, especially ideal for projects requiring frequent relocation of construction units.
- **Quality & Stress Resistance:** Built with robust steel construction, offering exceptional durability, earthquake resistance, and deformation resistance.
- **Sealing:** This feature has excellent sealing capabilities due to a precise manufacturing process, ensuring outstanding water-tightness.
- **Product Application Scope:** The mobile home, based on a standard steel chassis, supports various configurations, such as conference rooms, dormitories, kitchens, and toilets. Standard dimensions include a width of 2.4 meters, a height of 2.2 meters, and lengths ranging from 4 to 12 meters.
- **Merits:**
 - Easy to disassemble and reassemble
 - Superior structural stability and firmness
 - Excellent shockproof, waterproof, fireproof, and anti-corrosion properties
 - Lightweight and transportable as a single structure
 - Walls made of steel plates, with optional wood veneer finishes
 - Long service life, exceeding 20 years
- This design is suitable for versatile applications while maintaining durability and functionality.

Structural Insulated Panels vs. Traditional Framing

Structures built with SIPs perform above and beyond traditionally built buildings in numerous ways:

SIP structures are significantly more energy efficient than stick-built/fiberglass insulation structures.

SIP buildings are stronger than stick-built structures. Exhaustive laboratory testing has found them superior in sheer resistance and tensile strength.

SIP buildings are frequently found to be the only structures left standing after earthquakes, hurricanes, and tornadoes.

SIP homes and buildings are significantly quieter than traditionally built structures. Studies have shown that a more peaceful home or office is a healthier place to be.

- SIP structures have reduced air infiltration. When ventilated properly, they have superior indoor air quality compared with other traditional building methods.
- SIP buildings can be erected significantly faster. No other structural framing or insulation is necessary.
- SIP installation produces significantly less job site waste than traditional building materials.
- Most of the small amount of waste produced can be recycled.
- Building with SIPs is a sound financial investment. When you factor in labor, waste hauling, and energy savings, SIP structures are comparable to traditionally built homes.
- In addition, energy-efficient SIP homes often have a higher value on the real estate market and often qualify for energy-efficient mortgages.
