

Bio-X[®]

Direct Soil Application
or Adjunct for Fertilizer

Soil Smart SOLUTIONS[™]

Soil Fertility
Efficiency
Health

Bio-X is a product that aides in the bio-chemical processes in the soil to restore and improve the natural fertility of soils.

Bio-X is produced through a controlled fermentation process utilizing a proprietary multi-strain bacterial complex to produce bio-chemical compounds.

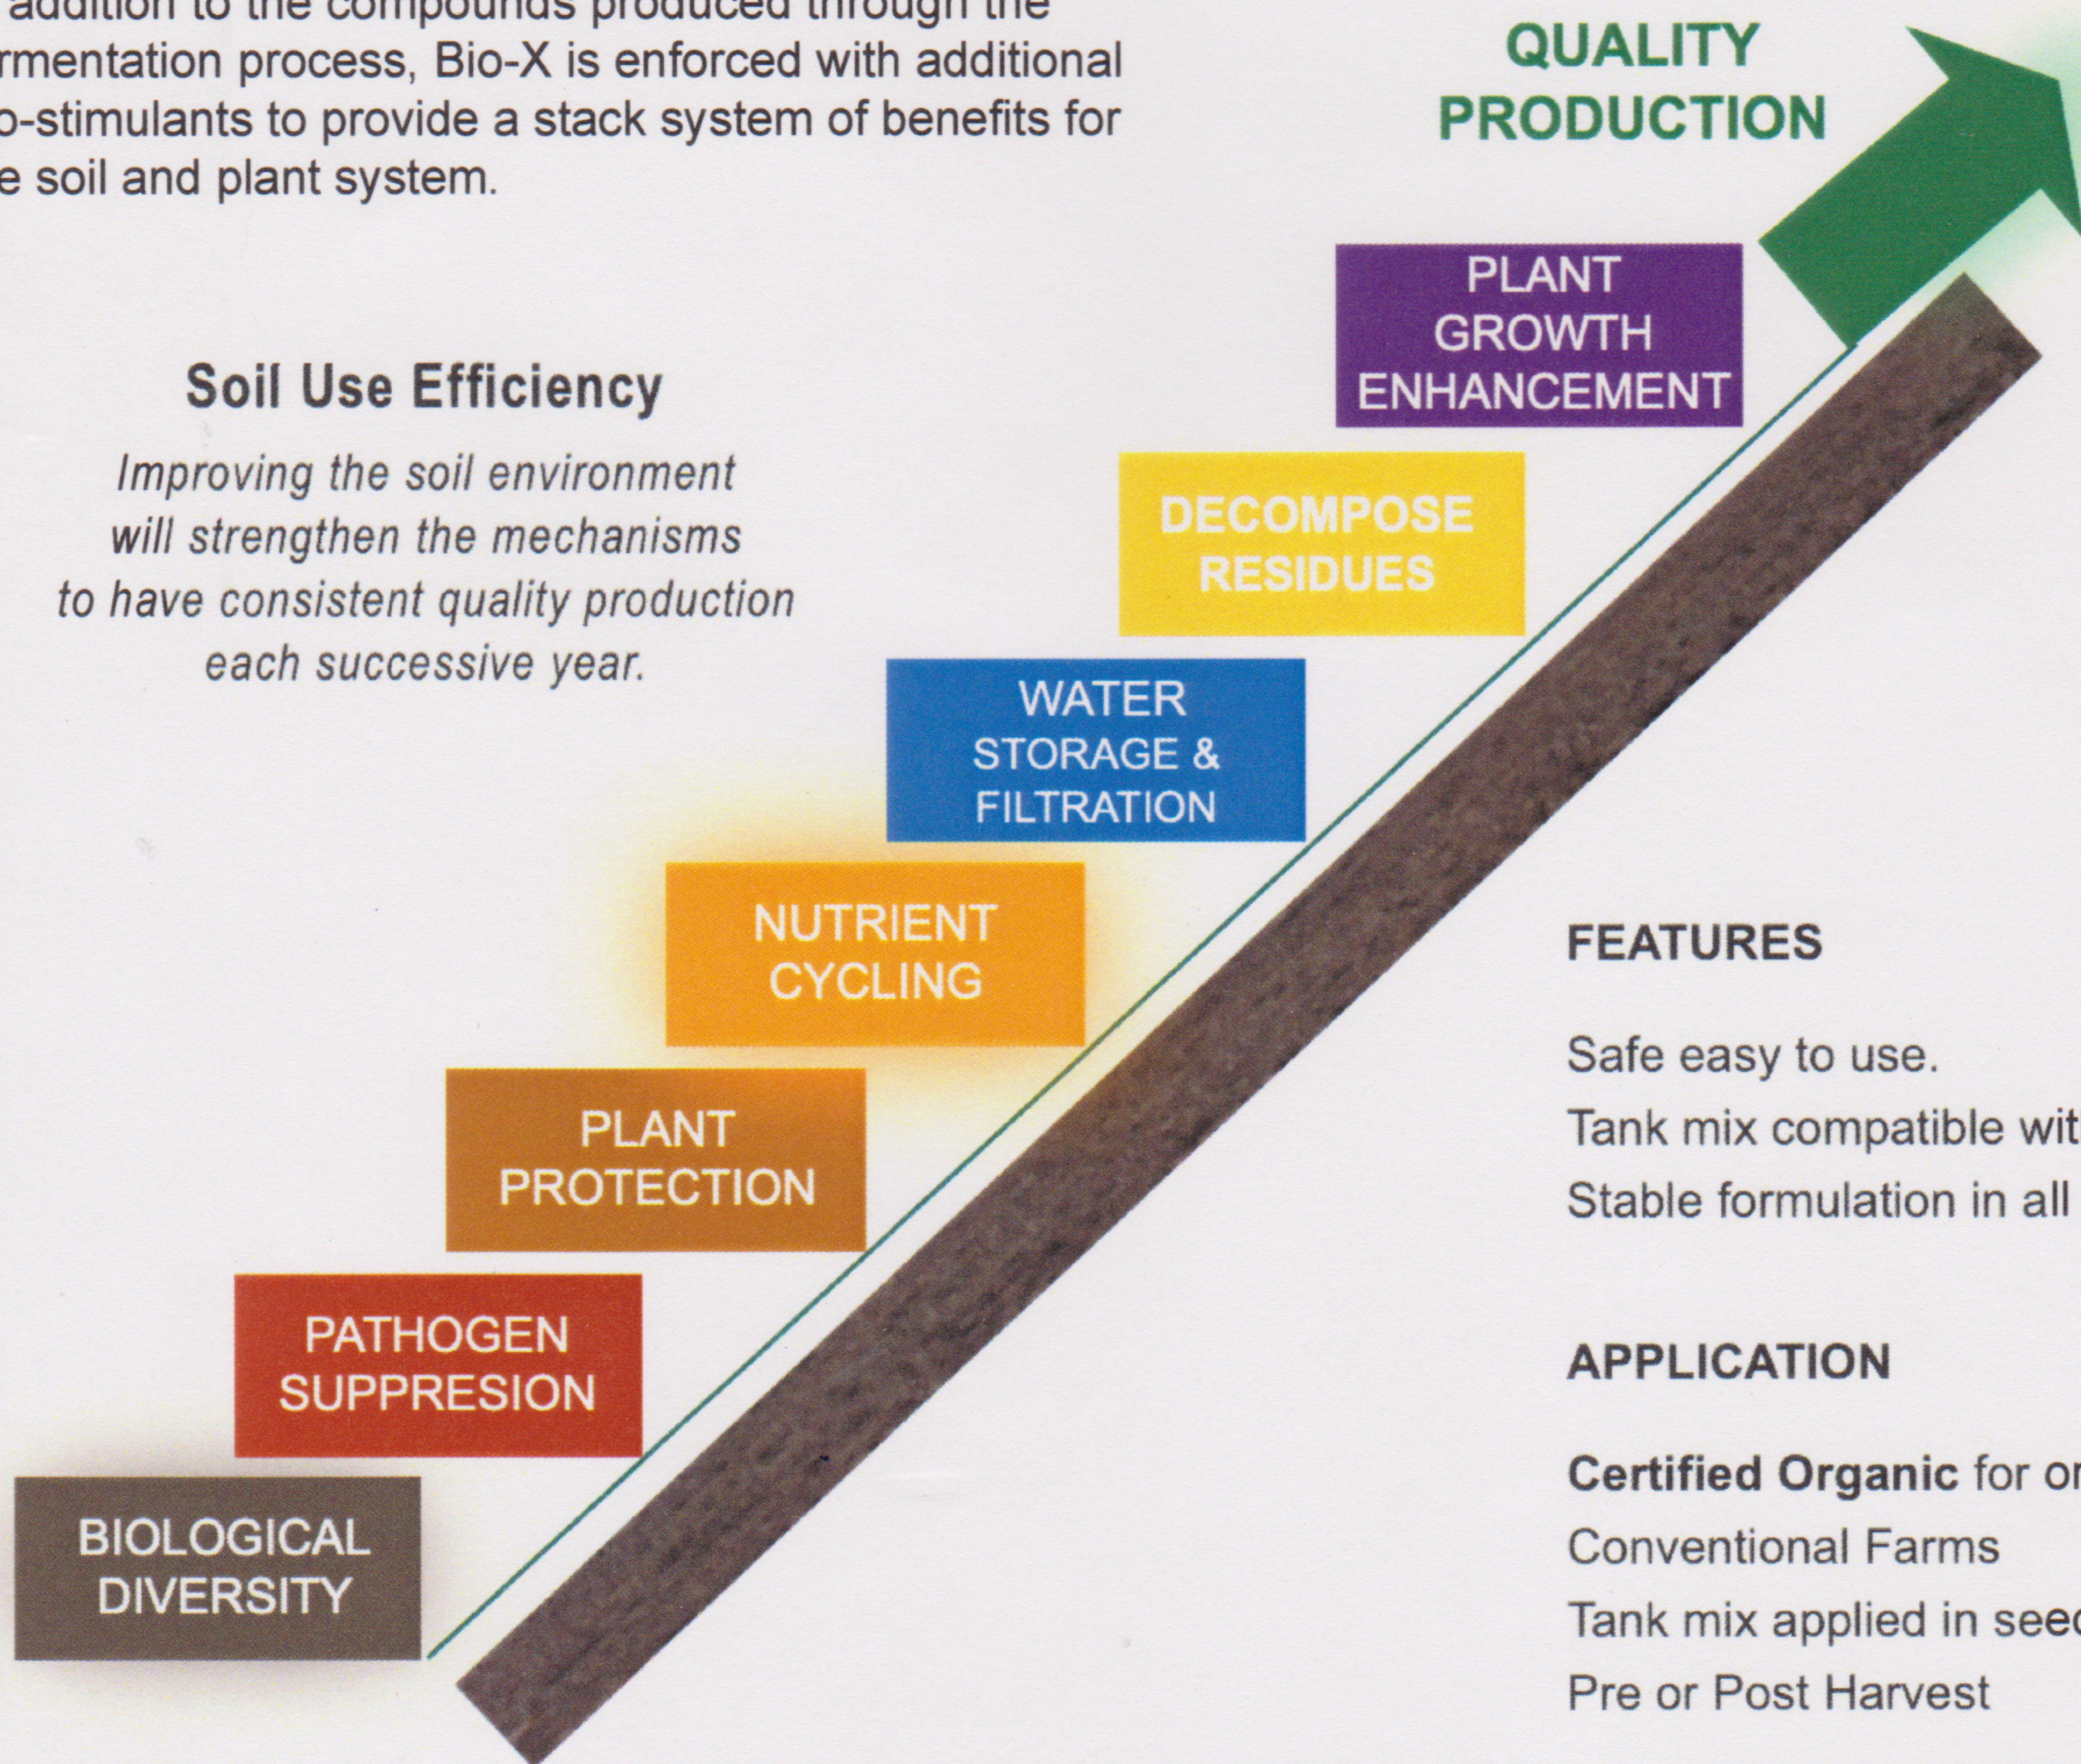

These compounds are the tools that microbes need to function in the soil, and determine their ability to process nutrients, stimulate root growth and perform other functions that are critical to plant health and nutrition.

In addition to the compounds produced through the fermentation process, Bio-X is enforced with additional bio-stimulants to provide a stack system of benefits for the soil and plant system.

BENEFITS

- * Improved quality production
- * Soil/Crops more resilient to disease
- * Improve productivity on marginal and saline land
- * Increases fertilizer efficiency (macro and micro)
- * Accelerated residue decomposition
- * Improved soil tilth, structure and moisture holding capacity
- * Cost effective Production

Soil Use Efficiency
*Improving the soil environment
will strengthen the mechanisms
to have consistent quality production
each successive year.*

**QUALITY
PRODUCTION**

Bio-X is the cornerstone product of BioAgronics.

Through all the years, Bio-X has consistently shown positive results with residual benefits.

FEATURES

Safe easy to use.
Tank mix compatible with fertilizer
Stable formulation in all soils types

APPLICATION

Certified Organic for organic farms
Conventional Farms
Tank mix applied in seed row
Pre or Post Harvest

PACKAGING

23.5 Litre Pail
1000 Litre Tote
