

# DYNA-GRO®

Crop Health Foliar Program

Crop Stress

Nutrient Management

Dyna-Gro is a foliar blend with nutrients and stimulants providing a full defence system to deal with crop health, stress, and shortages. The nutrients in Dyna-Gro are complexed for rapid uptake and absorption.

## BENEFITS

- Keep a healthy growing crop
- Tank mix with herbicides
- Fertility options to boost or correct deficiencies
- Tank mix with fungicides
- Large window for application

Won't burn crop  
when used as directed

Successful foliar feeding is about addressing a variety of factors that limit crop production.

It is not just about supplying more nutrient to the crop.

**TALK TO US  
ON HOW TO EFFECTIVELY  
FOLIAR FEED**

## WHY FOLIAR FEED

Every year yields are reduced by crop stress caused by a number of factors.

Poor growing conditions such as: too wet, low temperatures, late seeding, mid summer heat stress and lack of moisture. These conditions together with soil issues such as hardpan, compaction, lack of oxygen, salinity and nutrient deficiencies reduce yield potential.

**Keeping plant vigour through foliar feeding will mitigate potential losses from unfavourable conditions.**

Since 1979 BioAgronics has been a pioneer of foliar feeding to improve crop performance and continues to advance the technology.

Complete Nutrition Package - NPKS - Micro Nutrients - Rare Minerals - Plant Extracts - Fermented Solubles - Vitamin Complex
