

# PROBALITE

Hay Saver / Feed Metabolizer

## PROTECT YOUR FEED - PROTECT YOUR HERD

Probalite is produced through a fermentation process for the treatment of high moisture hay during baling and for the treatment of feeds.

### PRE DIGESTED FORMULA

Probalite is a lacto-fermented soluble product produced from food and feed grade ingredients utilizing naturally occurring organisms. These organisms are recognized by the scientific community as being beneficial for both human and livestock health.

During the fermentation process beneficial compounds are produced such as organic acids, enzymes, complex sugars, amino acids and vitamins. These ingredients are in a pre-digested form. This aids the digestion process and improves the bio-availability of the nutrients in the feed and promotes a healthy digestive tract.

Probalite is rich in the organic acid Lactic Acid. Lactic Acid is well recognized for its preservation effects.

### SAFE AND EASY TO USE

#### NON CORROSIVE

Suggested Use Rate:

400 mls. (14 oz.) per m.t. of Hay with approximately 3 liters of water per m.t. Rate of water can vary. Adjust water pH to 3-4

Do not use chlorinated or fluorinated water or water treated with blue stone.

Store in cool place away from direct sunlight.

*PROBALITE HAS BEEN DESIGNED TO STIMULATE MICROFLORA  
AND NOT INOCULATE PER SE*

#### BENEFITS

- Put up hay at a higher moisture
- More Palatable Feed
- Aid in feed conversion
- Maintain herd health
- Non Corrosive
