RID A MITE

TERMITE AND PEST CONTROL

SPECIALIZING IN TERMITE FUMIGATION, FOAM INJECTION SYSTEM FOR LARGE MULTI-UNITS BUILDINGS & PEST CONTROL.

COCKROACH PREPARATION

This letter is to prepare you for your upcoming interior pest control treatment. Please follow the directions below in order for the treatment to be a complete success. Eliminate the insects' food, water & shelter. **Preparation is 95% of eradication.**

- Clear baseboards throughout.
- Completely empty, wipe & vacuum (3x) all cabinets (kitchen & bathroom).
- Seal all cracks & crevices and eliminate any shelf paper that is lifting or in bad condition.
- Pull out refrigerator, dishwasher, stove, etc. Clean/sanitize inside, behind and underneath.
- Stove hood fans should be in excellent working condition and all should be cleaned thoroughly of grease/dirt/grime.
- Pile items/food on tables or in middle of floors (not against baseboards). Cover items completely with sheets/blankets or tarps.
- Clear & sanitize all bars, tables/tablecloths and contents on top.
- Clear & clean/vacuum (3x) entire floor and all closets completely.
- After vacuum-cleaning, dispose of the sweepings in a bucket of HOT water. They may contain larvae, eggs, or adult insects. If you leave sweepings in the cleaner, you may transfer an infestation from one place to another.
- Be prepared to vacate all humans & pets for approximately 2-3 hours (May not be applicable, please talk to your inspector for details) following treatment.
- When the treatment is completed you may return your items without fear of contamination.

Please call our office if you have any questions.
