

The Problem

Development teams lose valuable cycles to repetitive chores and after-hours bottlenecks:

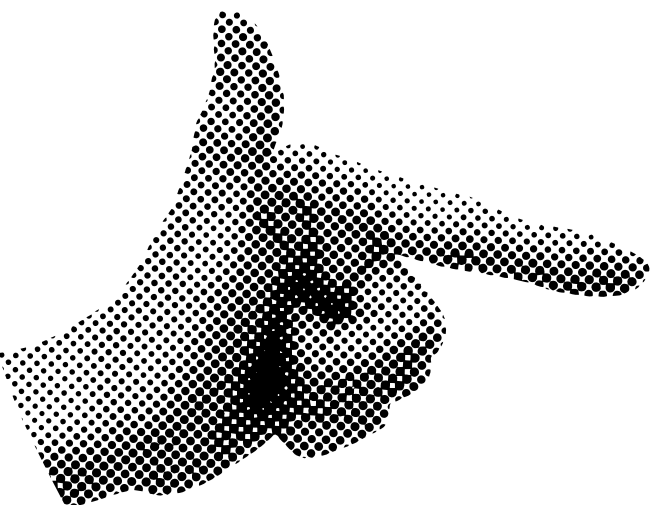

- Manual service desk ticket triage that stalls sprints.
- Hunting for root-cause across logs, configs, and scattered wikis.
- Single “critical reviewer” dependencies that freeze progress on evenings, weekends, and holidays.
- Growing compliance pressure to keep data on-prem and audit-ready

The Solution

True Worth AI provides a secure, AI “Conductor” that orchestrates specialised agents to do the heavy lifting:

- ✓ Auto-reviews new Jira* tickets 24/7, making them dev-ready before engineers even log on
- ✓ Pinpoints bugs and proposes code patches using models fine-tuned for C/TypeScript/PHP.
- ✓ Answers “how-do-I?” questions from user manuals, Confluence pages, or 500-page PDFs — instantly.
- ✓ Feeds results straight back into Jira, Bitbucket, Salesforce, HubSpot, and more
- ✓ Can be deployed on-prem or hosted or in your private cloud

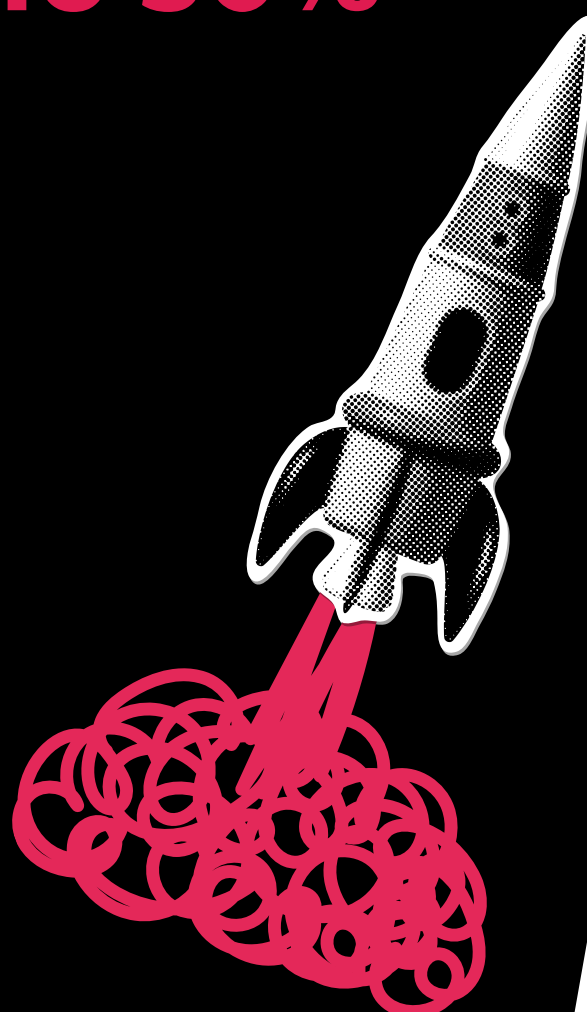

*We also support any service management platform, e.g. ServiceNow, Zendesk, etc

What it is

A secure, Core Orchestration Layer that delegates tasks to purpose-built AI agents. It plugs straight into your existing dev, support, and CRM tools. Minimal process change required.

The Result

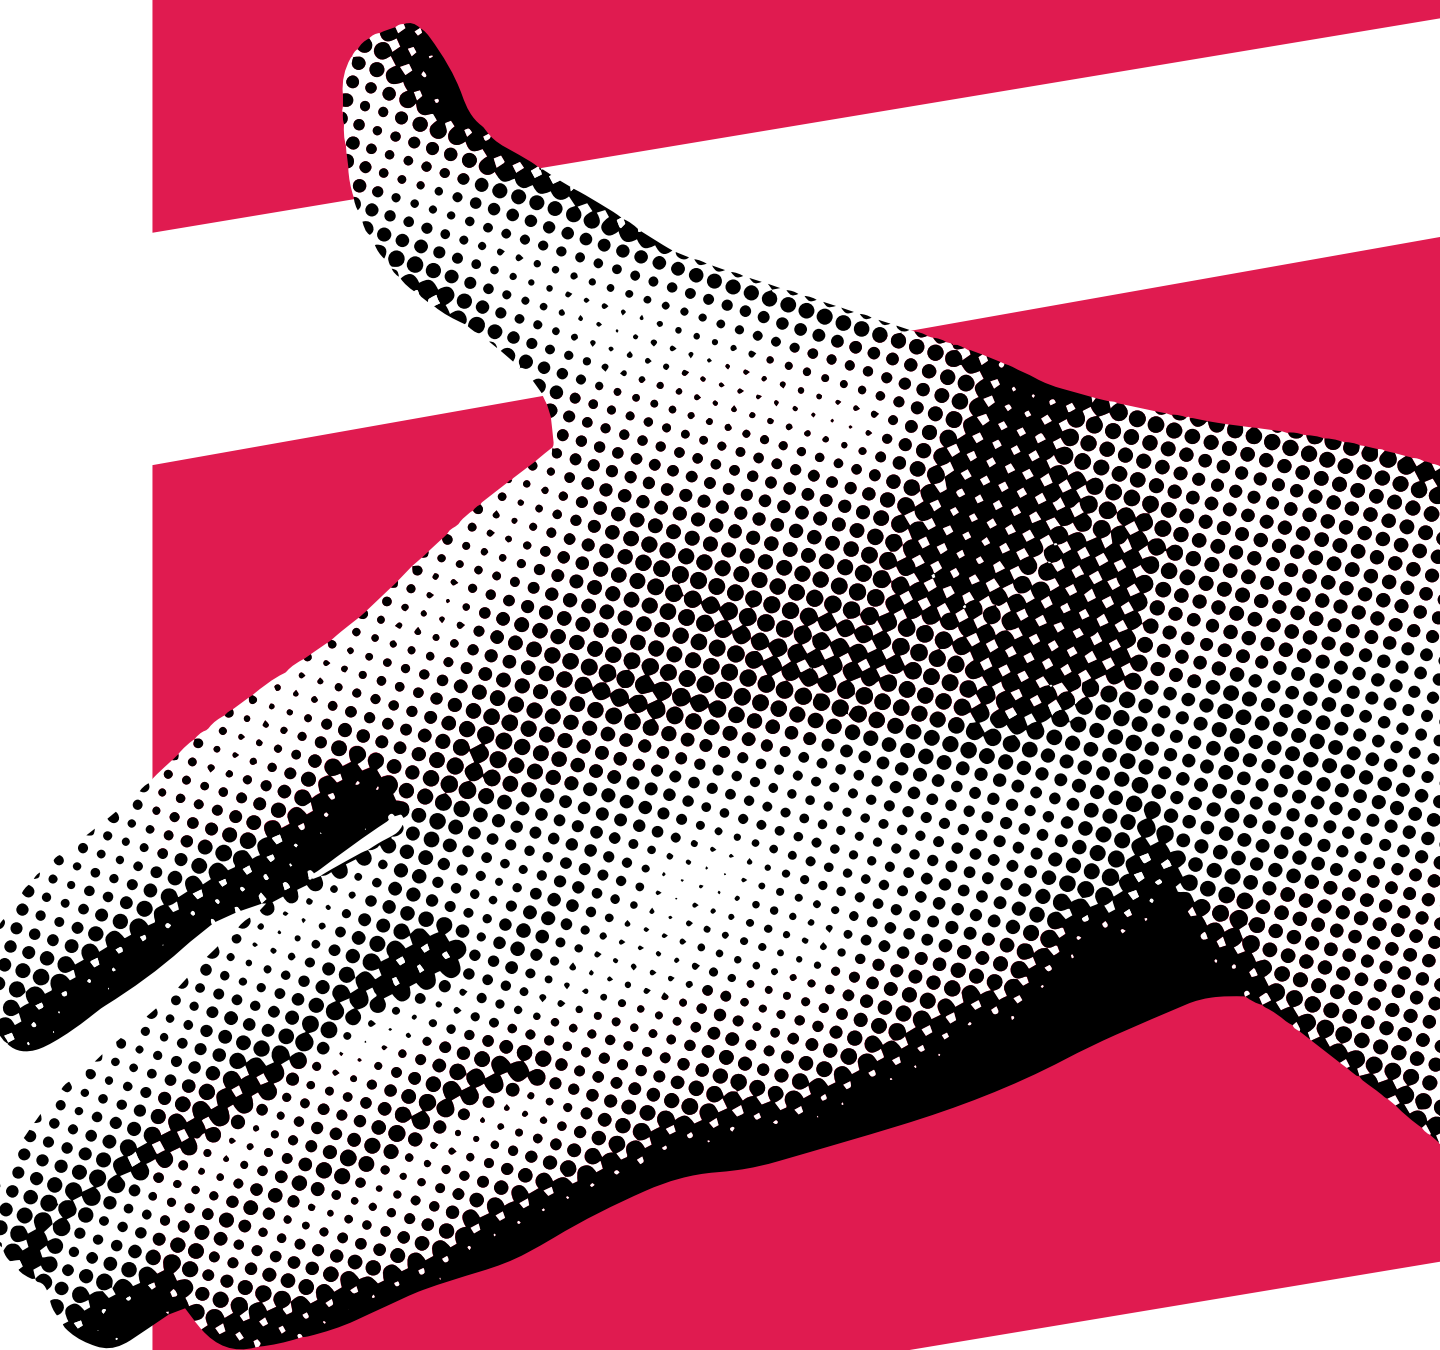

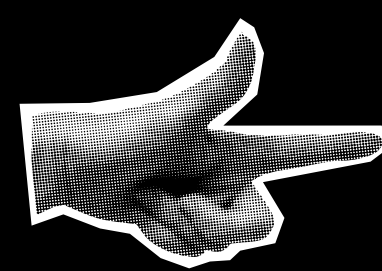

- 🕒 Tickets arrive dev-ready around the clock
- 📅 Time to resolution down by up to 50%
- ⚙️ Support escalations cut in half
- ↘️ Reduce support expenses

Get started

Deploy within 6-8 weeks and see ROI inside the first quarter.
