

RJT Solutions is a reseller of NanoSeptic® Continuously Self-Cleaning Surface Products.

The New Clean™

The New Clean™ means continuously self-cleaning surfaces. It means safe, non-toxic materials. It means turning dirty, high traffic public touchpoints into clean surfaces you can see.

The New Clean™ means less worry and a healthier environment—at work, school, in healthcare and travel.

NanoSeptic® Skins and Mats turn dirty high traffic, public touchpoints into continuously self-cleaning surfaces. Powered by light, NanoSeptic® surfaces utilize mineral nano-crystals which create an oxidation reaction stronger than bleach. Working 24/7, the surface continually oxidizes organic contaminants. Unlike traditional disinfectants and cleaners, the NanoSeptic® surface uses no poisons, heavy metals or chemicals, and nothing is released from the surface since the nano-crystals are molecularly bonded to the material.

Find out what The New Clean™ can mean for your business. Contact us today to find out how NanoSeptic® continuously self-cleaning mats and skins can be your first step toward creating a self-cleaning environment.

NanoSeptic® products have been in the marketplace for over 5 years.

NanoSeptic® Continuously Self-Cleaning Surfaces Frequently Asked Questions

How does the NanoSeptic® Surface work?

One of the components of the surface is a mineral nano-crystal which acts as a catalyst, charged by visible light. These nano-crystals create a continuous oxidation reaction stronger than bleach. This oxidation reaction breaks down organic material into base components such as CO₂. The surface also forms free radicals which act as an additional cleaning agent.

What do you mean by self-cleaning?

The NanoSeptic® surface continuously oxidizes organic contaminants at the microscopic level. Large scale contaminants must still be removed to allow the surface to do its job. This is similar to disinfectants, which require surfaces to be cleaned before the disinfectant can be effective.

How should I clean NanoSeptic® surfaces?

NanoSeptic® surfaces are not affected by traditional non-abrasive cleaners. We recommend wiping the surface with a microfiber cloth and water to remove large-scale contaminants. Do not use abrasive cleaners or cleaning utensils which might compromise the NanoSeptic® surface.

How long do NanoSeptic® products last?

We recommend replacing facility touch point skins every 90 days (quarterly). In some high traffic applications, they may need to be replaced more often. Mats, mousepads and tissue box covers should be replaced annually. Nothing gets used up or expires, so the products' shelf life is virtually unlimited. Product life is dependent on actual physical wear.

How do I know when to replace NanoSeptic® surfaces?

The easiest rule to follow is to replace the skins quarterly and the other products annually. However, the print serves as a wear indicator, so if the text or graphics become worn or faded, it's time to replace. Also, if the skins start to peel off, we recommend replacement to keep the touch point looking.
