

Type 91 Subsea Collet Connectors manufactured by Axon Pressure Products (APP) are used for making choke and kill line connections on a subsea BOP stack and LMRP assembly. These connectors are hydraulically actuated and utilize an AX type gasket to contain pressure by forming a metal-to-metal seal. Type 91 Subsea Collect Connectors are designed to form a strong connection to withstand bending stresses and separation forces caused by well pressure, tension in the riser and internal system pressure.
