

# Element News

From all of us at Element Electric...

We want to thank you all for your continued support during the Covid-19 Pandemic. Being an essential working company during this time, we have appreciated everyone working with us and having patience as we work hard to get everyone scheduled.

## "Spring" forward with these Electrical Tips

### **Be careful & cautious of power lines on and around your property.**

Be aware when using ladders and not to climb close to overhead power line. Always remind kids to watch out for power lines when flying kites or any remote controlled airplanes or flying toys. .

### **Inspect your power tools before use.**

Remember when using power tools for yard work, that you inspect the cords to make sure they insulated for outdoors and are safely intact. Also be careful of any water they may come in contact with.

### **Be careful of any underground electrical when digging.**

Planting new trees? New Garden? Make sure you know where your electrical lines are before hand digging and/or using any heavy machinery.

### **Not sure how to properly examine any of your electrical? Call the Pros!**

We are here to help refresh your electrical, inspect your property for any faulty electrical and will get you back up to speed for any outdoor Spring activities.
