

Scott Brown PE

I would like to be considered for a board member position. I believe my background in civil engineering and familiarity with agencies that govern public water purveyors would be valuable when making decisions related to the quality and sustainability of the water system.

I am currently the engineer for several local water systems that are similar to MSWC. The systems include:

- Sagle Valley Water & Sewer District, Sagle, ID
- Syringa Heights Water District, Sandpoint, ID
- Three Mile Water District, Boundary County, ID ● Beeline Water Association, Boundary County, ID
- Arrowhead Ranch Water District, Cocolalla, ID
- The Idaho Club North Lake PUD, Hope, ID

The water systems are composed of one or more of the following: public wells, a storage reservoir, distribution piping, pressure relief valves, and metered service connections. Specific tasks directly related to the water systems that I have recently overseen include:

- Well, pump, reservoir, and distribution piping design and construction oversight
- Permitting and design approval with the Idaho Department of Environmental Quality
 - Water rights permitting with the Idaho Department of Water Resources
- Public well permitting with Panhandle Health District
- Public well production and water quality testing
- Facility planning (evaluate the system to determine buildout capacity and estimate the life of system components to define short- and long-term expenditures) Thank you for your consideration. Please let me know if you have any questions.
