

TRY CCM FOR 30 DAYS FOR FREE

More and more often, I hear from physicians who tried to do Chronic Care Management on their own, only to discover that hiring a full time nurse for every 250 patients is too expensive or that their EHR doesn't allow for the patient's other physicians (the ortho, the cardio, the urologist, etc) to log in anytime they wish to see their own patient's info. I've seen practices audited and have to pay money back to Medicare for not doing what CCM requires. I've also seen doctors who tried with a service two years ago find out that things are different today and it works much better.

We've been working with Chartspan for a couple of years, and we've seen a tremendous improvement - even with them. When Harvey hit Houston, Rockport and the Texas coast this past year, Chartspan was calling patients PRIOR to it's arrival, asking patients where they needed new prescriptions sent, helping to arrange transportation and directing patients to shelters. I don't know any other company that was doing that.

When I pointed out to Chartspan that NPs and PAs get a 15% reduction, they came up with specific pricing packages just for the NPs and PAs. They've done something else too.

My clients that want a 30 day free trial of Chronic Care Management can have one. If you let me know you're interested, I'll arrange for a free month of CCM for 25 of your patients to show you how it helps your patients and your practice income. On top of that - they also report MIPS for their clients to help practices get the highest MACRA score. If you're interested, give us a call at 903 871-1172 and we'll arrange the free month trial.
