**BRCA1 and BRCA2 Genetic Testing — 81162, 81211, 81212, 81213, 81214, 81215, 81216, 81217, 81432, 81433, 81445, 81455****Coverage Indications, Limitations, and/or Medical Necessity****Covered Indications**

**INDICATIONS FOR BRCA 1 AND BRCA 2 TESTING** The following indications for BRCA 1 and BRCA 2 testing are covered by Medicare:

**Personal history of breast cancer or ovarian cancer and one or more of the following indications:**

The following are risk **Assessment** (stratification) items to be considered before testing in those patients with breast or ovarian cancer confirmed diagnosis that is suspected to be of hereditary origin.

- Personal history of ovarian\* carcinoma
- Personal history of male breast cancer
- Individual from a family with a known deleterious BRCA1/BRCA2 gene mutation
- Personal history of breast cancer and one or more of the following indications:
  - Diagnosed at ≤45 years of age;
  - Diagnosed at ≤50 years of age with:
    - An additional breast cancer primary;
    - ≥1 close blood relative\*\* with breast cancer at any age;
    - ≥1 close blood relative\*\* with pancreatic cancer;
    - ≥1 relative with prostate cancer (Gleason score ≥7);
    - An unknown or limited family history;
  - Diagnosed at ≤60 years of age with a:
    - Triple negative breast cancer (estrogen receptor (ER) negative, progesterone receptor (PR) negative, and human epidermal growth factor receptor 2 (HER2) negative);
  - Diagnosed at any age with:
    - ≥1 close blood relative\*\* with breast cancer diagnosed at ≤50 years of age;
    - ≥2 close blood relatives\*\* with breast cancer at any age;
    - ≥1 close blood relative\*\* with ovarian\* cancer
    - ≥2 close blood relatives\*\* with pancreatic cancer or prostate cancer (Gleason score ≥7) at any age;
    - Close male blood relative\*\* with breast cancer;
    - Individual of ethnicity associated with higher mutation frequency (e.g. Ashkenazi Jewish)
- Personal history of pancreatic and Ashkenazi Jewish ancestry
- Personal history of prostate cancer (Gleason score ≥7) at any age, with ≥1 close blood relative\*\* with ovarian\* carcinoma at any age or breast cancer (≤50 years of age) or two relatives with breast cancer, pancreatic cancer, or prostate cancer (Gleason score ≥7) at any age;
- Personal history of pancreatic cancer at any age with ≥1 close blood relative\*\* with ovarian\* carcinoma at any age or breast cancer (≤50 years of age) or two relatives with breast cancer, pancreatic cancer or prostate cancer (Gleason score ≥7) at any age;
- Personal history of cancer types listed above with a family history only (significant limitations of interpreting test results for an unaffected individual exists and therefore are not a covered benefit):
  - First- or second-degree blood relative\*\* meeting any of the above criteria
  - Third-degree blood relative\* who has breast cancer or ovarian\* carcinoma and who has ≥2 close blood relatives\*\* with breast cancer (at least one with breast cancer ≤50 years of age) or ovarian\* carcinoma

Similar to all testing, the following situations require explanation of medical necessity for BRCA testing in the patient's medical record:

- Individuals with little known family health history,
- Individuals who come from small families, and
- In the case of sex-specific conditions, individuals who have few female/male relatives at risk of developing a particular condition.
- Olaparib is a poly ADP-ribose polymerase (PARP) inhibitor approved by the FDA as monotherapy in patients with ovarian\* cancer, with deleterious or suspected deleterious

germline BRCA1 or BRCA2 mutation who have been treated with three or more prior lines of chemotherapy. Testing of ovarian\* cancer patients in this clinical scenario is indicated to guide treatment.

**Multigene Panels Indications\*\*\***

- BRCA1 and BRCA2 genetic testing for susceptibility to breast or ovarian\* cancer with multi-gene next-generation sequencing (NGS) panels is covered as medically necessary when ALL of the following criteria are met:
  - All genes in the panel are relevant to the personal and family history for the individual being tested (panels with genes that are not relevant to the individual's personal and family history are not reasonable and necessary);
  - Criteria listed above in Indications for BRCA1 and BRCA2 Testing #4, #5, #6, or #7 are met.
  - Individual also meets criteria for at least ONE BRCA-related cancer syndrome for which NCCN guidelines provide clear testing criteria and management recommendations, including but not limited to BRCA-related breast or ovarian\*\* cancer syndrome, Li-Fraumeni Syndrome, Cowden Syndrome, or Lynch Syndrome.

\*\*\* While not required for payment, NCCN Guidelines recommend referral to a cancer genetics professional with expertise and experience in cancer genetics prior to genetic testing and after genetic testing. Examples of cancer genetics professionals with expertise and experience in cancer genetics include: an American Board of Medical Genetics or American Board of Genetic Counseling certified or board eligible Clinical Geneticist, Medical Geneticist or Genetic Counselor not employed by a commercial genetic testing laboratory (excludes individuals employed by or contracted with a laboratory that is part of an Integrated Health System which routinely delivers health care services beyond just the laboratory test itself as these individuals are also considered independent); medical oncologist, obstetrician-gynecologist or other physician trained in medical cancer genetics, a genetic nurse credentialed as either a Genetic Clinical Nurse or an Advanced Practice Nurse in Genetics by either the Genetic Nursing Credentialing Commission (GNCC) or the American Nurses Credentialing Center (ANCC) who is not employed by a commercial genetic testing laboratory (excludes individuals employed by or contracted with a laboratory that is part of an Integrated Health System which routinely delivers health care services beyond just the laboratory test itself as these individuals are also considered independent).

**Limitations**

**Testing of an unaffected Medicare eligible individual or family member is considered not reasonable and necessary.**

BRCA1/BRCA2 genetic testing is considered not reasonable and necessary, thus it is non-covered, for the following indications:

- Genetic screening in the general population or
- **Testing of individuals with no personal history of breast, ovarian\*, fallopian tube, primary peritoneal, pancreatic or prostate cancer.** Such testing is considered screening and is excluded by Medicare statute. An ABN must be obtained for BRCA 1 and BRCA 2 testing for individuals without signs and symptoms of breast, ovarian\* or other BRCA-related cancer syndromes as indicated in this policy.
- Testing of individuals less than 18 years of age.
- If a patient has been previously tested for BRCA1 and BRCA2, repeat testing prior to Lynparza therapy is not reasonable and necessary and will not be covered by Medicare.

\*Includes fallopian tube, and primary peritoneal cancers. BRCA-related ovarian cancers are associated with epithelial non-mucinous histology.

\*\*NCCN defines close or blood relative as first- (parents, siblings and children), second- (grandparents, aunts, uncles, nieces and nephews, grandchildren and half-siblings), and third degree-relatives (great-grandparents, great-aunts, great uncles, great grandchildren and first cousins) on same side (either maternal or paternal) of the family.

For frequency limitations please refer to the Utilization Guidelines section below.

**Notice:** This LCD imposes frequency limitations as well as diagnosis limitations that support

**BRCA1 and BRCA2 Genetic Testing — 81162, 81211, 81212, 81213, 81214, 81215, 81216, 81217, 81432, 81433, 81445, 81455**

diagnosis to procedure code automated denials. However, services performed for any given diagnosis must meet all of the indications and limitations stated in this policy, the general requirements for medical necessity as stated in CMS payment policy manuals, any and all existing CMS national coverage determinations, and all Medicare payment rules.

**Utilization Guidelines**

In accordance with CMS Ruling 95-1 (V), utilization of these services should be consistent with locally acceptable standards of practice.

BRCA testing is limited to once-in-a-lifetime per beneficiary.

**Group 1-Medicare is establishing the following limited coverage for CPT codes: 81162, 81211, 81212, 81213, 81214, 81215, 81216, 81217, 81432, 81433, 81445, 81455**

The following diagnoses support the covered indications for BRCA1 and BRCA2 Testing:

**Carcinoembryonic Antigen (CEA) — 82378****Indications**

CEA may be medically necessary for follow-up of patients with colorectal carcinoma. It would however only be medically necessary at treatment decision-making points. In some clinical situations (e.g. adenocarcinoma of the lung, small cell carcinoma of the lung, and some gastrointestinal carcinomas) when a more specific marker is not expressed by the tumor, CEA may be a medically necessary alternative marker for monitoring. Preoperative CEA may also be helpful in determining the post-operative adequacy of surgical resection and subsequent medical management. In general, a single tumor marker will suffice in following patients with colorectal carcinoma or other malignancies that express such tumor markers.

In following patients who have had treatment for colorectal carcinoma, ASCO guideline suggests that if resection of liver metastasis would be indicated, it is recommended that post-operative CEA testing be performed every two to three months in patients with initial stage II or stage III disease for at least two years after diagnosis.

For patients with metastatic solid tumors which express CEA, CEA may be measured at the start of the treatment and with subsequent treatment cycles to assess the tumor's response to therapy.

**Limitations**

Serum CEA determinations are generally not indicated more frequently than once per chemotherapy treatment cycle for patients with metastatic solid tumors which express CEA or every two months post-surgical treatment for patients who have had colorectal carcinoma. However, it may be proper to order the test more frequently in certain situations, for example, when there has been a significant change from prior CEA level or a significant change in patient status which could reflect disease progression or recurrence.

Testing with a diagnosis of an in situ carcinoma is not reasonably done more frequently than once, unless the result is abnormal, in which case the test may be repeated once.

**Cardiovascular Disease Screening — 80061, 82465, 83718, 84478****Coverage Indications, Limitations, and/or Medical Necessity**

Effective for dates of service, January 1, 2005, and later, MACs shall recognize the below HCPCS codes for Cardiovascular Disease Screening.

80061 – Lipid Panel

82465 – Cholesterol, serum or whole blood, total

83718 – Lipoprotein, direct measurement, high density cholesterol

84478 – Triglycerides

MACs shall pay for Cardiovascular Disease Screening once every 60 months.

A claim that is submitted for Cardiovascular Disease Screening shall be submitted in the following manner: The line item shall contain 80061, 82465, 83718 or 84478 with one of the following diagnoses:

**Alpha Sort**

Z13.6 Encounter for screening for cardiovascular disorders

**Numeric Sort**

Z13.6

**Collagen Cross Links, Any Method — 82523****Limitations**

Because of significant specimen to specimen collagen crosslink physiologic variability (15-20%), current recommendations for appropriate utilization include: one or two base-line assays from specified urine collections on separate days; followed by a repeat assay about 3 months after starting anti-resorptive therapy; followed by a repeat assay in 12 months after the 3-month assay; and thereafter not more than annually, unless there is a change in therapy in which circumstance an additional test may be indicated 3 months after the initiation of new therapy. Some collagen crosslink assays may not be appropriate for use in some disorders, according to FDA labeling restrictions.

## Colorectal Cancer Screening—81528, 82270, G0328

### Benefit Category

Colorectal Cancer Screening Tests

**Note:** This may not be an exhaustive list of all applicable Medicare benefit categories for this item or service.

### Item/Service Description

#### A. General

Sections 1861(s)(2)(R) and 1861(pp) of the Social Security Act (the Act) and regulations at 42 CFR 410.37 authorize Medicare coverage for screening colorectal cancer tests under Medicare Part B. The statute and regulations authorize the Secretary to add other tests and procedures (and modifications to tests and procedures for colorectal cancer screening) as the Secretary finds appropriate based on consultation with appropriate experts and organizations.

### Indications and Limitations of Coverage

#### B. Nationally Covered Indications

##### 1. Fecal Occult Blood Tests (FOBT) (effective January 1, 2004)

Fecal occult blood tests (FOBTs) are generally divided into two types: immunoassay and guaiac types. Immunoassay (or immunochemical) fecal occult blood tests (iFOBT) use antibodies directed against human globin epitopes. While most iFOBTs use spatulas to collect stool samples, some use a brush to collect toilet water surrounding the stool. Most iFOBTs require laboratory processing.

Guaiac fecal occult blood tests (gFOBT) use a peroxidase reaction to indicate presence of the heme portion of hemoglobin. Guaiac turns blue after oxidation by oxidants or peroxidases in the presence of an oxygen donor such as hydrogen peroxide. Most FOBTs use sticks to collect stool samples and may be developed in a physician's office or a laboratory. In 1998, Medicare began reimbursement for guaiac FOBTs, but not immunoassay type tests for colorectal cancer screening. Since the fundamental process is similar for other iFOBTs, the Centers for Medicare & Medicaid Services evaluated colorectal cancer screening using immunoassay FOBTs in general.

Effective for dates of service on and after January 1, 2004, Medicare covers one screening FOBT per annum for the early detection of colorectal cancer. This means that Medicare will cover one guaiac-based (gFOBT) or one immunoassay-based (iFOBT) at a frequency of every 12 months; i.e., at least 11 months have passed following the month in which the last covered screening FOBT was performed, for beneficiaries aged 50 years and older. The beneficiary completes the existing gFOBT by taking samples from two different sites of three consecutive stools; the beneficiary completes the iFOBT by taking the appropriate number of stool samples according to the specific manufacturer's instructions. This screening requires a written order from the beneficiary's attending physician. ("Attending physician" means a doctor of medicine or osteopathy (as defined in §1861(r)(1) of the Act) who is fully knowledgeable about the beneficiary's medical condition, and who would be responsible for using the results of any examination performed in the overall management of the beneficiary's specific medical problem.)

##### 2. The Cologuard™ - Multitarget Stool DNA (sDNA) Test (effective October 9, 2014)

Screening stool or fecal DNA (deoxyribonucleic acid, sDNA) testing detects molecular markers of altered DNA that are contained in the cells shed by colorectal cancer and pre-malignant colorectal epithelial neoplasia into the lumen of the large bowel. Through the use of selective enrichment and amplification techniques, sDNA tests are designed to detect very small amounts of DNA markers to identify colorectal cancer or pre-malignant colorectal neoplasia. The Cologuard™ - multitarget sDNA test is a proprietary in vitro diagnostic device that incorporates both sDNA and fecal immunochemical test techniques and is designed to analyze patients' stool samples for markers associated with the presence of colorectal cancer and pre-malignant colorectal neoplasia.

Effective for dates of service on or after October 9, 2014, The Cologuard™ test is covered once every three years for Medicare beneficiaries that meet all of the following criteria:

- Age 50 to 85 years, and,
- Asymptomatic (no signs or symptoms of colorectal disease including but not limited to lower gastrointestinal pain, blood in stool, positive guaiac fecal occult blood test (gFOBT) or fecal immunochemical test (iFOBT)), and,
- At average risk of developing colorectal cancer (no personal history of adenomatous polyps, colorectal cancer, or inflammatory bowel disease, including Crohn's Disease and ulcerative colitis; no family history of colorectal cancers or adenomatous polyps, familial adenomatous polyposis, or hereditary nonpolyposis colorectal cancer).

#### C. Nationally Non-Covered Indications

All other indications for colorectal cancer screening not otherwise specified in the Act and regulations, or otherwise specified above remain nationally non-covered. Non-coverage specifically includes:

- (1) All screening sDNA tests, effective April 28, 2008, through October 8, 2014. Effective for dates of service on or after October 9, 2014, all other screening sDNA tests not otherwise specified above remain nationally non-covered.
- (2) Screening computed tomographic colonography (CTC), effective May 12, 2009.

The following relate to CPT 81528:

#### Alpha Sort

- |        |  |
|--------|--|
| Z12.12 | Encounter for screening for malignant neoplasm of rectum |
| Z12.11 | Encounter for screening for malignant neoplasm of colon  |

#### Numeric Sort

- Z12.11
- Z12.12

## Controlled Substance Monitoring and Drugs of Abuse Testing— 80159, 80171, 80173, 80183, 80184, 80305, 80306, 80307, 83789, 83992, 84999, G0480, G0481, G0482, G0483, G0659

### Coverage Indications, Limitations, and/or Medical Necessity

#### A. Presumptive Testing Methods:

##### 1. CLIA-waived Presumptive UDT:

CLIA-waived presumptive UDT consist of various platforms including cards, dipsticks, cassettes and cups based on qualitative competitive immunoassay methodology with one or more analytes in the test.

- Positive test results are presumptive or not definitive due to sensitivity and cross-reactivity limitations.
- Negative test results do not necessarily indicate the absence of a drug or substance in the urine specimen.
- Presumptive UDT may be ordered when it is necessary to rapidly obtain and integrate results into clinical assessment and treatment decisions.
- This type of test should only be used when results are needed immediately.

##### 2. Presumptive UDT by FDA Approved/Cleared IA Analysis

- Chemistry analyzers with IA UDT technology are used in an office or clinical laboratory setting. When FDA approved/cleared platforms and reagents are used, testing is classified as moderately complex.
- This test may be used when less immediate test results are required.
- At no time is IA technology by chemistry analyzer analysis considered confirmatory (definitive) testing.
- Presumptive positive tests are not definitive due to sensitivity, specificity, and cross-reactivity limitations.
- Negative test results do not necessarily indicate the absence of a drug or substance in the urine specimen.

##### 3. Presumptive UDT by Laboratory Developed Test (LDT) IA Analysis:

- Similar to #2 above except only performed in a clinical laboratory setting.

#### Limitations of Presumptive UDT:

Presumptive UDT testing is limited for the following reasons:

- Primarily screens for drug classes rather than specific drugs, and therefore, the practitioner may not be able to determine if a different drug within the same class is causing the positive result;
- Produces erroneous results due to cross-reactivity with other compounds or does not detect all drugs within a drug class;
- Given that not all prescription medications or synthetic/analog drugs are detectable or have assays available, it is unclear as to whether other drugs are present when some tests are reported as positive;
- Cut-off may be too high to detect presence of a drug. This information could cause a practitioner to make a wrong assumption or clinical decision.

#### B. Definitive UDT:

Gas Chromatography coupled with Mass Spectrometry (GC-MS) and High Performance Liquid Chromatography coupled with Tandem Mass Spectrometry (LC-MS/MS) are complex technologies that use the separation capabilities of gaseous or liquid chromatography with the analytical capabilities of mass spectrometry.

Both methodologies require the competency of on-site highly trained experts in this technology and interpretation of results. While these tests require different sample preparation and analytical runs, they are quantitative tests that identify all specific drugs, metabolites, and most illicit substances and report the results as absent or present in concentrations of ng/mL.

Quantification should not be used to determine adherence with a specific dosage or time of dose of a pain medication or illicit drug for clinical purposes. Rather, the use of quantitative drug data may be important for many reasons such as in a differential patient assessment.

For example, when several opioids are present in the urine of a patient prescribed a single opioid, quantification may help the clinician decide whether the presence of the other opioids is consistent with metabolism of the prescribed opioid, opioid contamination during manufacturing, or if more than one drug within a class is being used.

Quantification may also provide information in the setting of illicit drug use. Serial creatinine-corrected quantitative values may assist in the differential assessment of ongoing drug use or cessation of drug use with continued drug excretion.

Definitive UDT is reasonable and necessary in order to:

- Identify a specific substance or metabolite that is inadequately detected by a presumptive UDT;
- Definitively identify specific drugs in a large family of drugs;
- Identify a specific substance or metabolite that is not detected by presumptive UDT such as fentanyl, meperidine, synthetic cannabinoids and other synthetic/analog drugs;
- Identify drugs when a definitive concentration of a drug is needed to guide management (e.g., discontinuation of THC use according to a treatment plan);
- Identify a negative, or confirm a positive, presumptive UDT result that is inconsistent with a patient's self-report, presentation, medical history, or current prescribed pain medication plan;
- Rule out an error as the cause of a presumptive UDT result;
- Identify non-prescribed medication or illicit use for ongoing safe prescribing of controlled substances; and
- Use in a differential assessment of medication efficacy, side effects, or drug-drug interactions.

Definitive UDT may be reasonable and necessary based on patient specific indications, including historical use, medication response, and clinical assessment, when accurate results are necessary to make clinical decisions. The clinician's rationale for the definitive UDT and the tests ordered must be documented in the patient's medical record.

#### Covered Indications for UDT

**Group A** – Symptomatic patients, multiple drug ingestion or patients with unreliable history.

A patient who presents in a variety of medical settings with signs or symptoms of substance use toxicity will be treated presumptively to stabilize the patient while awaiting rapid, then definitive testing to determine the cause(s) of the presentation.

The need for definitive UDT is based upon rapid test findings, responses to medical interventions, and treatment plan.

A presumptive UDT should be performed as part of the evaluation and management of a patient who presents in an urgent care setting with any one of the following:

- Coma
- Altered mental status in the absence of a clinically defined toxic syndrome or toxidrome
- Severe or unexplained cardiovascular instability (cardiotoxicity)
- Unexplained metabolic or respiratory acidosis in the absence of a clinically defined toxic syndrome or toxidrome
- Seizures with an undetermined history
- To provide antagonist to specific drug

The presumptive findings, definitive drug tests ordered and reasons for the testing must be documented in the patient's medical record.

**Group B** - Diagnosis and treatment for substance abuse or dependence.

A patient in active treatment for substance use disorder (SUD) or monitoring across different phases of recovery may undergo medical management for a variety of medical conditions.

A physician who is writing prescriptions for medications to treat either the SUD or other conditions may need to know if the patient is taking substances which can interact with prescribed medications or taking prescribed medications as expected.

## Controlled Substance Monitoring and Drugs of Abuse Testing— 80159, 80171, 80173, 80183, 80184, 80305, 80306, 80307, 83789, 83992, 84999, G0480, G0481, G0482, G0483, G0659

The risk of drug-drug interactions is inherent to the patient, and may be compounded by prescribed medications.

UDT is a medically necessary and useful component of chemical dependency diagnosis and treatment. The UDT result influences treatment and level of care decisions.

Ordered tests and testing methods (presumptive or definitive) must match the stage of screening, treatment, or recovery; the documented history; and Diagnostic and Statistical Manual of Mental Disorders (DSM V) diagnosis.

For patients with no known indicators of risk for SUDs, the clinician may screen for a broad range of commonly abused drugs using presumptive UDT.

For patients with known indicators of risk for SUDs, the clinician may screen for a broad range of commonly abused drugs using definitive UDT.

For patients with a diagnosed SUD, the clinician should perform random UDT, at random intervals in order to properly monitor the patient. Testing profiles must be determined by the clinician based on the following medical necessity guidance criteria:

- Patient history, physical examination, and previous laboratory findings
- Stage of treatment or recovery;
- Suspected abused substance;
- Substances that may present high risk for additive or synergistic interactions with prescribed medication (e.g., benzodiazepines, alcohol).

The patient's medical record must include an appropriate testing frequency based on the stage of screening, treatment, or recovery; the rationale for the drugs/drug classes ordered; and the results must be documented in the medical record and used to direct care.

### Group C – Treatment for patients on chronic opioid therapy (COT).

A physician who is writing prescriptions for medications to treat chronic pain can manage a patient better if the physician knows whether the patient is consuming another medication or substance, which could suggest the possibility of SUD or lead to drug-drug interactions. Additionally, UDT may help the physician monitor for medication adherence, efficacy, side effects, and patient safety in general.

A broad cross section of the general population will develop either cancer pain syndrome or non-cancer pain which will require prolonged or chronic opioid therapy for management. The risk of addiction in this population is considered equivalent to the risk in the general population. In contrast to the population of individuals who have a history of SUD, in the cancer and non-cancer pain population the risk of SUD is inherent to the substance(s) to which the patient is exposed.

#### 1. COT UDT Testing Objectives:

- Identifies absence of prescribed medication and potential for abuse, misuse, and diversion;
- Identifies undisclosed substances, such as alcohol, unsanctioned prescription medication, or illicit substances;
- Identifies substances that contribute to adverse events or drug-drug interactions;
- Provides objectivity to the treatment plan;
- Reinforces therapeutic compliance with the patient;
- Provides additional documentation demonstrating compliance with patient evaluation and monitoring;
- Provides diagnostic information to help assess individual patient response to medications (e.g., metabolism, side effects, drug-drug interaction, etc.) over time for ongoing management of prescribed medications.

#### 2. Medical Necessity Guidance:

Criteria to establish medical necessity for drug testing must be based on patient-specific elements identified during the clinical assessment, and documented by the clinician in the patient's medical record and minimally include the following elements:

- Patient history, physical examination and previous laboratory findings;
- Current treatment plan;

- Prescribed medication(s); and
- Risk assessment plan.

National pain organizations, physician societies, and the Federation of State Medical Boards recommend a practical approach to definitive UDT for COT.

Frequency of testing beyond the baseline presumptive UDT must be based on individual patient needs substantiated by documentation in the patient's medical record. Recommendations for the ordering of presumptive and definitive UDT for patients on COT are as follows:

#### a. COT Baseline Testing:

Initial presumptive or definitive COT patient testing may include amphetamine/methamphetamine, barbiturates, benzodiazepines, cocaine, methadone, oxycodone, tricyclic antidepressants, tetrahydrocannabinoid, opioids, opiates, heroin, and synthetic/analog or "designer" drugs.

#### b. COT Monitoring Testing:

Ongoing testing may be medically reasonable and necessary based on the patient history, clinical assessment, including medication side effects or inefficacy, suspicious behaviors, self-escalation of dose, doctor-shopping, indications/symptoms of illegal drug use, evidence of diversion, or other clinician documented change in affect or behavioral pattern.

The frequency of testing must be based on a complete clinical assessment of the individual's risk potential for abuse and diversion using a validated risk assessment interview or questionnaire and should include the patient's response to prescribed medications and the side effects of medications.

The clinician should perform random UDT at random intervals, in order to properly monitor a patient. UDT testing does not have to be associated with an office visit.

### Drug Testing Panels

#### a. Presumptive UDT Panels

Presumptive UDT testing may be ordered as a panel because the Medicare billing codes are defined on a "per patient encounter" basis regardless of the number of analytes tested.

Presumptive UDT orders should be individualized based on clinical history and risk assessment, and must be documented in the medical record.

#### b. Definitive UDT Panels

At the current time, physician-directed definitive profile testing is reasonable and necessary when ordered for a particular patient based upon historical use and community trends. However, the same physician-defined profile is not reasonable and necessary for every patient in a physician's practice.

Definitive UDT orders should be individualized based on clinical history and risk assessment, and must be documented in the medical record.

### Specimen Type

Urine or oral fluid is the preferred biologic specimen for testing because of the ease of collection, storage, and cost-effectiveness. UDT cannot detect the dosage of drug ingested/used, the time of use, or the means of delivery (intravenous vs. oral vs. inhaled). Detection time of a substance in urine is typically 1-3 days depending on the drug, rate of metabolism, and rate of excretion. Lipid-soluble drugs, such as marijuana, may remain in body fat and be detected upwards of a week or more.

### Other Covered Services

1. Reflex Testing by Reference Laboratories — since reference laboratories do not have access to patient-specific data, reflex testing under the following circumstances is reasonable and necessary:

- To verify a presumptive positive UDT using definitive UDT (GC-MS or LCMS/MS) before reporting the presumptive finding to the ordering clinician and without an additional order from the clinician;

## Controlled Substance Monitoring and Drugs of Abuse Testing— 80159, 80171, 80173, 80183, 80184, 80305, 80306, 80307, 83789, 83992, 84999, G0480, G0481, G0482, G0483, G0659

Or

- To confirm the absence of prescribed medications when a negative result is obtained by presumptive UDT in the laboratory for a prescribed medication listed by the ordering clinician.

2. Direct to definitive UDT without a presumptive UDT is reasonable and necessary, when individualized for a particular patient, in the following circumstances:

- To identify a specific substance or its metabolite that is in a large class of drugs, or that is inadequately detected or not detected by presumptive UDT, such as fentanyl, meperidine, synthetic cannabinoids, and other synthetic/analog drugs;
- For use in a differential assessment of medication efficacy, side effects, or drug-drug interactions;
- To identify non-prescribed medication or illicit substance use for ongoing safe prescribing of controlled substances, where clinician has documented concerns related to safety risks attendant to failure to identify specific substances suspected based upon clinical review and judgment; or
- To identify drugs when a definitive concentration of a drug is needed to guide management (e.g., discontinuation of THC use according to a treatment plan).

3. Definitive testing to confirm a negative presumptive UDT result, upon the order of the clinician, is reasonable and necessary in the following circumstances:

- The result is inconsistent with a patient's self-report, presentation, medical history, or current prescribed medication plan (should be present in the sample);
- Following a review of clinical findings, the clinician suspects use of a substance that is inadequately detected or not detected by a presumptive UDT; or
- To rule out an error as the cause of a negative presumptive UDT result.

4. Definitive testing to confirm a presumptive UDT positive result, upon the order of the clinician, is reasonable and necessary when the result is inconsistent with the expected result, a patient's self-report, presentation, medical history, or current prescribed medication plan.

### Limitations

#### Non-Covered Services

- Blanket Orders.
- Reflex definitive UDT is not reasonable and necessary when presumptive testing is performed at point of care because the clinician may have sufficient information to manage the patient. If the clinician is not satisfied, he/she must determine the clinical appropriateness of and order specific subsequent definitive testing (e.g., the patient admits to using a particular drug, or the IA cut-off is set at such a point that is sufficiently low that the physician is satisfied with the presumptive test result).
- Routine standing orders for all patients in a physician's practice are not reasonable and necessary.
- It is not reasonable and necessary for a physician to perform presumptive POCT and order presumptive IA testing from a reference laboratory. In other words, Medicare will only pay for one presumptive test result per patient per date of service regardless of the number of billing providers.
- It is not reasonable and necessary for a physician to perform presumptive IA testing and order presumptive IA testing from a reference laboratory with or without reflex testing. Medicare will only pay for one presumptive test result per patient per date of service regardless of the number of billing providers.
- It is not reasonable and necessary for a reference laboratory to perform and bill IA presumptive UDT prior to definitive testing without a specific physician's order for the presumptive testing.
- IA testing, regardless of whether it is qualitative or semi-quantitative (numerical), may not be used to "confirm" or definitively identify a presumptive test result obtained by cups, dipsticks, cards, cassettes or other IA testing methods. Definitive UDT provides specific identification or quantification by GC-MS or LCMS/MS.
- Drug testing of two different specimen types from the same patient on the same date of service for the same drugs/metabolites/analytes.

- UDT for medico-legal or employment purposes or to protect a physician from drug diversion charges.
- Specimen validity testing including, but not limited to, pH, specific gravity, oxidants, creatinine.

As published in CMS IOM Pub. 100-08, Chapter 13, Section 13.5.1, in order to be covered under Medicare, a service shall be reasonable and necessary. When appropriate, contractors shall describe the circumstances under which the proposed LCD for the service is considered reasonable and necessary under Section 1862(a)(1)(A). Contractors shall consider a service to be reasonable and necessary if the contractor determines that the service is:

- Safe and effective.
- Not experimental or investigational (exception: routine costs of qualifying clinical trial services with dates of service on or after September 19, 2000 that meet the requirements of the Clinical Trials NCD are considered reasonable and necessary).
- Appropriate, including the duration and frequency that is considered appropriate for the service, in terms of whether it is:
  - Furnished in accordance with accepted standards of medical practice for the diagnosis or treatment of the patient's condition or to improve the function of a malformed body member.
  - Furnished in a setting appropriate to the patient's medical needs and condition.
  - Ordered and furnished by qualified personnel.
  - One that meets, but does not exceed, the patient's medical needs.
  - At least as beneficial as an existing and available medically appropriate alternative.

### Utilization Guidelines

In accordance with CMS Ruling 95-1 (V), utilization of these services should be consistent with locally acceptable standards of practice.

The contractor will consider presumptive UDT testing in excess of 12 per Calendar year not reasonable and necessary.

NOTE: An exception to the above limitation will be made when patients have documented diagnoses consistent with a substance abuse disorder (SUD), for which patients presumptive UDT shall not occur more than 3 times within a seven-day period, based upon the following guidelines for monitoring abstinence.

For patients with 0 to 30 consecutive days of abstinence, presumptive UDT is expected at a frequency of 1 to 3 presumptive UDT per week. More than 3 presumptive panels in one week is not reasonable and necessary and is not covered by Medicare.

For patients with 31 to 90 consecutive days of abstinence, presumptive UDT is expected at a frequency of 1 to 3 UDT per week. More than 3 presumptive UDT in one week is not reasonable and necessary and is not covered by Medicare.

For patients with > 90 consecutive days of abstinence, presumptive UDT is expected at a frequency of 1 to 3 UDT in one month. More than 3 physician-directed UDT in one month is not reasonable and necessary and is not covered by Medicare.

The contractor will only pay for one presumptive UDT test per patient per date of service regardless of the number of billing providers.

For chronic opioid therapy (COT), the contractor will consider up to 12 definitive tests (i.e., definitive UDT) per Calendar year reasonable and necessary. This would correspond to random testing performed 1-3 times every 3 months for prescribed medications, non-prescribed medications that may pose a safety risk if mixed with prescribed and illicit substances based on patient history, clinical presentation or community usage.

## C-Reactive Protein High Sensitivity Testing (hsCRP)— 86141

### Coverage Indications, Limitations, and/or Medical Necessity

CRP testing, CPT code 86140, is eligible for coverage as a diagnostic test for the detection and evaluation of infection, tissue injury, and inflammatory disease. This CPT code, 86140, is not to be used in place of CPT code 86141, which represents high sensitivity C-reactive protein (hsCRP) testing and the subject of this policy.

This contractor will consider high-sensitivity C-reactive protein (hsCRP) testing reasonable and necessary when ALL of the following criteria are met:

When the hsCRP would add substantial incremental information in the decision making process to optimize/maximize lipid lowering pharmacologic therapy, (e.g., use of statins), in a patient who has been identified as being at intermediate risk for CAD (10-year risk of coronary heart disease between 10–20% per the ATPIII Guidelines). This is to be used for a one time decision point and is not intended to monitor therapy.

The test is performed in patients considered to be metabolically stable and without obvious inflammatory or infectious conditions.

### Limitations

Medicare does not provide coverage for routine screening performed without a relationship to the evaluation or treatment of a symptom, sign, illness or injury. If high sensitivity C-reactive protein (hsCRP) testing is performed for cardiovascular risk assessment, in the absence of signs or symptoms of illness or injury, then the service will be denied as not reasonable and necessary.

Medicare does not cover hsCRP testing as a screening test for the general population or for monitoring response to therapy.

Although hsCRP is commonly elevated in inflammatory conditions (e.g., rheumatic fever, rheumatoid arthritis, systemic vasculitis, myocardial infarction, acute pancreatitis), measurements in these illnesses is not appropriate and is considered not reasonable and necessary.

### Utilization Guidelines

In accordance with CMS Ruling 95-1 (V), utilization of these services should be consistent with locally acceptable standards of practice.

Generally, the measurement of hsCRP markers is performed twice (averaging results), optimally two weeks apart and fasting or nonfasting, with the average expressed in mg/L, in metabolically stable patients.

It is considered reasonable and necessary to perform no more than 3 hsCRP services per patient lifetime.

### ICD-10 Codes that Support Medical Necessity for CPT/HCPCS code 86141:

#### Alpha Sort

I25.10	Atherosclerotic heart disease of native coronary artery without angina pectoris
E78.01	Familial hypercholesterolemia
E78.3	Hyperchylomicronemia
E78.2	Mixed hyperlipidemia
E78.4	Other hyperlipidemia
Z74.09*	Other reduced mobility
Z78.9*	Other specified health status
E78.00	Pure hypercholesterolemia, unspecified
E78.1	Pure hyperglyceridemia

#### Numeric Sort

E78.00
E78.01
E78.1
E78.2
E78.3
E78.4
I25.10
Z74.09*
Z78.9*

Medical Necessity ICD-10 Codes Asterisk Explanation: \*\*Use ICD-10-CM code Z74.09 and Z78.9 for patients at intermediate risk for CAD who do not have elevated lipids (i.e., do not meet criteria to use ICD-10-CM codes E78.00-E78.4).

## Cytogenetic Studies — 88230, 88233, 88235, 88237, 88239, 88240, 88241, 88245, 88248, 88249, 88261, 88262, 88263, 88264, 88267, 88269, 88271, 88272, 88273, 88274, 88275, 88280, 88283, 88285, 88289, 88291, 88299

### Indications and Limitations of Coverage

Medicare covers these tests when they are reasonable and necessary for the diagnosis or treatment of the following conditions:

- Genetic disorders (e.g., mongolism) in a fetus; (See the Medicare Benefit Policy Chapter 15, “Covered Medical and Other Health Services,” §20.1)
- Failure of sexual development;
- Chronic myelogenous leukemia;
- Acute leukemias lymphoid (FAB L1-L3), myeloid (FAB M0-M7), and unclassified; or
- Myelodysplasia

The following ICD codes relate to CPTs 88230, 88233, 88235, 88240, 88241, 88267, 88269, 88289, 88291, 88299:

C4A.52	Merkel cell carcinoma of skin of breast		
C4A.30	Merkel cell carcinoma of unspecified part of face		

**Cytogenetic Studies — 88230, 88233, 88235, 88237, 88239, 88240, 88241, 88245, 88248, 88249, 88261, 88262, 88263, 88264, 88267, 88269, 88271, 88272, 88273, 88274, 88275, 88280, 88283, 88285, 88289, 88291, 88299**

**Alpha Sort—continued**

C81.06	Nodular lymphocyte predominant Hodgkin lymphoma, intrapelvic lymph nodes	Q93.88	Other microdeletions
C81.02	Nodular lymphocyte predominant Hodgkin lymphoma, intrathoracic lymph nodes	C93.Z2	Other monocytic leukemia, in relapse
C81.04	Nodular lymphocyte predominant Hodgkin lymphoma, lymph nodes of axilla and upper limb	C93.Z1	Other monocytic leukemia, in remission
C81.01	Nodular lymphocyte predominant Hodgkin lymphoma, lymph nodes of head, face, and neck	C93.Z0	Other monocytic leukemia, not having achieved remission
C81.05	Nodular lymphocyte predominant Hodgkin lymphoma, lymph nodes of inguinal region and lower limb	D46.Z	Other myelodysplastic syndromes
C81.08	Nodular lymphocyte predominant Hodgkin lymphoma, lymph nodes of multiple sites	C92.Z0	Other myeloid leukemia not having achieved remission
C81.07	Nodular lymphocyte predominant Hodgkin lymphoma, spleen	C92.Z2	Other myeloid leukemia, in relapse
C81.00	Nodular lymphocyte predominant Hodgkin lymphoma, unspecified site	C92.Z1	Other myeloid leukemia, in remission
C81.19	Nodular sclerosis Hodgkin lymphoma, extranodal and solid organ sites	D70.8	Other neutropenia
C81.13	Nodular sclerosis Hodgkin lymphoma, intra-abdominal lymph nodes	C83.89	Other non-follicular lymphoma, extranodal and solid organ sites
C81.16	Nodular sclerosis Hodgkin lymphoma, intrapelvic lymph nodes	C83.83	Other non-follicular lymphoma, intra-abdominal lymph nodes
C81.12	Nodular sclerosis Hodgkin lymphoma, intrathoracic lymph nodes	C83.86	Other non-follicular lymphoma, intrapelvic lymph nodes
C81.14	Nodular sclerosis Hodgkin lymphoma, lymph nodes of axilla and upper limb	C83.82	Other non-follicular lymphoma, intrathoracic lymph nodes
C81.11	Nodular sclerosis Hodgkin lymphoma, lymph nodes of head, face, and neck	C83.84	Other non-follicular lymphoma, lymph nodes of axilla and upper limb
C81.15	Nodular sclerosis Hodgkin lymphoma, lymph nodes of inguinal region and lower limb	C83.81	Other non-follicular lymphoma, lymph nodes of head, face, and neck
C81.18	Nodular sclerosis Hodgkin lymphoma, lymph nodes of multiple sites	C83.85	Other non-follicular lymphoma, lymph nodes of inguinal region and lower limb
C81.17	Nodular sclerosis Hodgkin lymphoma, spleen	C83.88	Other non-follicular lymphoma, lymph nodes of multiple sites
C81.10	Nodular sclerosis Hodgkin lymphoma, unspecified site	C83.87	Other non-follicular lymphoma, spleen
C83.94	Non-follicular (diffuse) lymphoma, unspecified, lymph nodes of axilla and upper limb	C83.80	Other non-follicular lymphoma, unspecified site
C85.90	Non-Hodgkin lymphoma, unspecified, unspecified site	E28.8	Other ovarian dysfunction
D53.9	Nutritional anemia, unspecified	D61.818	Other pancytopenia
D47.4	Osteomyelofibrosis	E28.39	Other primary ovarian failure
D60.8	Other acquired pure red cell aplasias	D69.49	Other primary thrombocytopenia
D59.1	Other autoimmune hemolytic anemias	D64.3	Other sideroblastic anemias
Q95.8	Other balanced rearrangements and structural markers	D64.89	Other specified anemias
Q55.4	Other congenital malformations of vas deferens, epididymis, seminal vesicles and prostate	D61.89	Other specified aplastic anemias and other bone marrow failure syndromes
D61.09	Other constitutional aplastic anemia	Q99.8	Other specified chromosome abnormalities
D72.818	Other decreased white blood cell count	D75.89	Other specified diseases of blood and blood-forming organs
Q93.89	Other deletions from the autosomes	C94.80	Other specified leukemias not having achieved remission
Q93.5	Other deletions of part of a chromosome	C94.82	Other specified leukemias, in relapse
D51.3	Other dietary vitamin B12 deficiency anemia	C94.81	Other specified leukemias, in remission
D72.828	Other elevated white blood cell count	C44.590	Other specified malignant neoplasm of anal skin
D52.8	Other folate deficiency anemias	C44.89	Other specified malignant neoplasm of overlapping sites of skin
C81.79	Other Hodgkin lymphoma, extranodal and solid organ sites	C44.591	Other specified malignant neoplasm of skin of breast
C81.73	Other Hodgkin lymphoma, intra-abdominal lymph nodes	C44.299	Other specified malignant neoplasm of skin of left ear and external auricular canal
C81.76	Other Hodgkin lymphoma, intrapelvic lymph nodes	C44.199	Other specified malignant neoplasm of skin of left eyelid, including canthus
C81.72	Other Hodgkin lymphoma, intrathoracic lymph nodes	C44.799	Other specified malignant neoplasm of skin of left lower limb, including hip
C81.74	Other Hodgkin lymphoma, lymph nodes of axilla and upper limb	C44.699	Other specified malignant neoplasm of skin of left upper limb, including shoulder
C81.71	Other Hodgkin lymphoma, lymph nodes of head, face, and neck	C44.09	Other specified malignant neoplasm of skin of lip
C81.75	Other Hodgkin lymphoma, lymph nodes of inguinal region and lower limb	C44.391	Other specified malignant neoplasm of skin of nose
C81.78	Other Hodgkin lymphoma, lymph nodes of multiple sites	C44.599	Other specified malignant neoplasm of skin of other part of trunk
C81.77	Other Hodgkin lymphoma, spleen	C44.399	Other specified malignant neoplasm of skin of other parts of face
C81.70	Other Hodgkin lymphoma, unspecified site	C44.292	Other specified malignant neoplasm of skin of right ear and external auricular canal
C91.Z0	Other lymphoid leukemia not having achieved remission	C44.192	Other specified malignant neoplasm of skin of right eyelid, including canthus
C91.Z2	Other lymphoid leukemia, in relapse	C44.792	Other specified malignant neoplasm of skin of right lower limb, including hip
C91.Z1	Other lymphoid leukemia, in remission	C44.692	Other specified malignant neoplasm of skin of right upper limb, including shoulder
Q98.3	Other male with 46, XX karyotype	C44.49	Other specified malignant neoplasm of skin of scalp and neck
C88.8	Other malignant immunoproliferative diseases	C44.390	Other specified malignant neoplasm of skin of unspecified parts of face
D53.1	Other megaloblastic anemias, not elsewhere classified	C44.99	Other specified malignant neoplasm of skin, unspecified
		C96.Z	Other specified malignant neoplasms of lymphoid, hematopoietic and related tissue
		D47.Z9	Other specified neoplasms of uncertain behavior of lymphoid, hematopoietic and related tissue

**Cytogenetic Studies — 88230, 88233, 88235, 88237, 88239, 88240, 88241, 88245, 88248, 88249, 88261, 88262, 88263, 88264, 88267, 88269, 88271, 88272, 88273, 88274, 88275, 88280, 88283, 88285, 88289, 88291, 88299**

**Alpha Sort—continued**

D53.8	Other specified nutritional anemias	C79.81	Secondary malignant neoplasm of breast
Q97.8	Other specified sex chromosome abnormalities, female phenotype	C79.32	Secondary malignant neoplasm of cerebral meninges
Q98.8	Other specified sex chromosome abnormalities, male phenotype	C79.82	Secondary malignant neoplasm of genital organs
Q92.8	Other specified trisomies and partial trisomies of autosomes	C78.5	Secondary malignant neoplasm of large intestine and rectum
C85.89	Other specified types of non-Hodgkin lymphoma, extranodal and solid organ sites	C79.72	Secondary malignant neoplasm of left adrenal gland
C85.83	Other specified types of non-Hodgkin lymphoma, intra-abdominal lymph nodes	C79.02	Secondary malignant neoplasm of left kidney and renal pelvis
C85.86	Other specified types of non-Hodgkin lymphoma, intrapelvic lymph nodes	C78.02	Secondary malignant neoplasm of left lung
C85.82	Other specified types of non-Hodgkin lymphoma, intrathoracic lymph nodes	C79.62	Secondary malignant neoplasm of left ovary
C85.84	Other specified types of non-Hodgkin lymphoma, lymph nodes of axilla and upper limb	C78.7	Secondary malignant neoplasm of liver and intrahepatic bile duct
C85.81	Other specified types of non-Hodgkin lymphoma, lymph nodes of head, face, and neck	C78.1	Secondary malignant neoplasm of mediastinum
C85.85	Other specified types of non-Hodgkin lymphoma, lymph nodes of inguinal region and lower limb	C78.89	Secondary malignant neoplasm of other digestive organs
C85.88	Other specified types of non-Hodgkin lymphoma, lymph nodes of multiple sites	C79.49	Secondary malignant neoplasm of other parts of nervous system
C85.87	Other specified types of non-Hodgkin lymphoma, spleen	C78.39	Secondary malignant neoplasm of other respiratory organs
C85.80	Other specified types of non-Hodgkin lymphoma, unspecified site	C79.89	Secondary malignant neoplasm of other specified sites
E29.8	Other testicular dysfunction	C79.19	Secondary malignant neoplasm of other urinary organs
Q96.8	Other variants of Turner's syndrome	C78.2	Secondary malignant neoplasm of pleura
D51.8	Other vitamin B12 deficiency anemias	C78.6	Secondary malignant neoplasm of retroperitoneum and peritoneum
E28.9	Ovarian dysfunction, unspecified	C79.71	Secondary malignant neoplasm of right adrenal gland
Q50.32	Ovarian streak	C79.01	Secondary malignant neoplasm of right kidney and renal pelvis
Q92.2	Partial trisomy	C78.01	Secondary malignant neoplasm of right lung
C84.49	Peripheral T-cell lymphoma, not classified, extranodal and solid organ sites	C79.61	Secondary malignant neoplasm of right ovary
C84.43	Peripheral T-cell lymphoma, not classified, intra-abdominal lymph nodes	C79.2	Secondary malignant neoplasm of skin
C84.46	Peripheral T-cell lymphoma, not classified, intrapelvic lymph nodes	C78.4	Secondary malignant neoplasm of small intestine
C84.42	Peripheral T-cell lymphoma, not classified, intrathoracic lymph nodes	C78.80	Secondary malignant neoplasm of unspecified digestive organ
C84.44	Peripheral T-cell lymphoma, not classified, lymph nodes of axilla and upper limb	C79.40	Secondary malignant neoplasm of unspecified part of nervous system
C84.41	Peripheral T-cell lymphoma, not classified, lymph nodes of head, face, and neck	C78.30	Secondary malignant neoplasm of unspecified respiratory organ
C84.45	Peripheral T-cell lymphoma, not classified, lymph nodes of inguinal region and lower limb	C79.10	Secondary malignant neoplasm of unspecified urinary organs
C84.48	Peripheral T-cell lymphoma, not classified, lymph nodes of multiple sites	D64.1	Secondary sideroblastic anemia due to disease
C84.47	Peripheral T-cell lymphoma, not classified, spleen	D64.2	Secondary sideroblastic anemia due to drugs and toxins
C84.40	Peripheral T-cell lymphoma, not classified, unspecified site	Q97.9	Sex chromosome abnormality, female phenotype, unspecified
C90.12	Plasma cell leukemia in relapse	Q98.9	Sex chromosome abnormality, male phenotype, unspecified
C90.11	Plasma cell leukemia in remission	C84.19	Sezary disease, extranodal and solid organ sites
C90.10	Plasma cell leukemia not having achieved remission	C84.13	Sezary disease, intra-abdominal lymph nodes

**Diabetes Screening — 82947, 82950, 82951****Coverage Indications, Limitations, and/or Medical Necessity**

Effective for dates of service January 1, 2005 and later, MAC shall recognize the below HCPCS codes for diabetes screening.

82947 – Glucose, quantitative, blood (except reagent strip)

82950 – post-glucose dose (includes glucose)

82951 – tolerance test (GTT), three specimens (includes glucose)

MACs shall pay for diabetes screening once every 12 months for a beneficiary that is not pre-diabetic. MACs shall pay for diabetes screening at a frequency of once every 6 months for a beneficiary that meets the definition of pre-diabetes.

A claim that is submitted for diabetes screening by a physician or supplier for a beneficiary that does not meet the definition of pre-diabetes shall be submitted in the following manner:

**Alpha Sort**

Z13.1 Encounter for screening for diabetes mellitus

**Numeric Sort**

Z13.1

**Digoxin Therapeutic Assay — 80162****Indications**

The value of obtaining regular serum digoxin levels is uncertain, but it may be reasonable to check levels once yearly after a steady state is achieved. In addition, it may be reasonable to check the level if:

- Heart failure status worsens
- Renal function deteriorates
- Additional medications are added that could affect the digoxin level
- Signs or symptoms of toxicity develop

Steady state will be reached in approximately 1 week in patients with normal renal function, although 2-3 weeks may be needed in patients with renal impairment. After changes in dosages or the addition of a medication that could affect the digoxin level, it is reasonable to check the digoxin level one week after the change or addition. Based on the clinical situation, in cases of digoxin toxicity, testing may need to be done more than once a week.

**Fecal Occult Blood — 82272****Limitations**

1. The FOBT is reported once for the testing of up to three separate specimens (comprising either one or two tests per specimen).
2. In patients who are taking non-steroidal anti-inflammatory drugs and have a history of gastrointestinal bleeding but no other signs, symptoms, or complaints associated with gastrointestinal blood loss, testing for occult blood may generally be appropriate no more than once every three months.

When testing is done for the purpose of screening for colorectal cancer in the absence of signs, symptoms, conditions, or complaints associated with gastrointestinal blood loss, report the HCPCS code for colorectal cancer screening; fecal-occult blood test, 1-3 simultaneous determinations should be used.
