

# Medicare Medical Necessity

Documenting Medicare Medical  
Necessity of Laboratory Services

**Novitas Solutions, Inc.**  
**Medicare Administrative Contractor**  
**Jurisdiction H**  
**April 2017 Edition**

***This document is provided as an informational service to LabCorp accounts. The document contains certain Local Coverage Determinations issued at various times by the Medicare Administrative Contractor (MAC) and National Coverage Determinations issued by the Centers for Medicare and Medicaid Services. The information compiled herein is as of April 1, 2017. There can be no representation or warranty as to the accuracy or completeness of the information or that use of this information will comply with the local or national policies. To ensure the accurate and appropriate use of the information, it is recommended that the MAC be consulted. Primary sources (i.e. MAC publications, notices, and advice) should be consulted prior to the use of this information for purposes other than for submitting diagnosis codes to LabCorp. This is particularly important since information is often affected by ongoing developments.***

## **Medicare Medical Necessity**

The Centers for Medicare and Medicaid Services (CMS) requires MACs to establish policies to ensure the medical necessity of services being paid for by the Medicare program. CMS itself established national policies and effective November 25, 2002, implemented the National Coverage Determinations (NCDs). MACs will approve payment only for those particular test procedures when they have determined them to be medically necessary for the patient. As a result, a claim submitted for payment of a test on a local or national list without a specific diagnosis code (ICD-10-CM) that indicates medical necessity based upon the local or national policies will result in denial of payment for these services. This policy applies to all Medicare Part B providers of clinical laboratory services.

CMS in conjunction with the Public Health Service presented guidelines for diagnosis coding. In part these guidelines state:

ICD-10-CM are to be used at their highest level of specificity, e.g.,

- Assign 3-digit codes only if there are no 4, 5, or 6-character codes within that code subcategory,
- Assign 4, 5, and 6-character subcategory codes only if there is no 7-character extension code for that category
- Assign 7-character extension code for those categories where it exists.
- Assign a "X" placeholder code(s) if a 7-character extension code is needed and there are no 4, 5, or 6 characters within that subcategory.

ICD-10-CM is composed of codes with either 3-7 characters. Codes with 3 characters are included in ICD-10-CM as standalone codes or as the heading of a category of codes that are further subdivided by the use of fourth, fifth, and sixth characters and a seventh character extension which provide greater specificity. The first character of a three-character category is always a letter (A-Z excluding U); the second and third characters may be numbers or alpha characters; and the fourth through seventh characters can be any combination of letters (excluding U) and numbers. In instances when a letter or number is not an option for the fourth, fifth, or sixth characters, the letter "X" is used as a placeholder to allow future expansion without disturbing the coding structure.

The MAC, Novitas Solutions, Inc., has established specific prepayment medical necessity documentation requirements for certain laboratory tests. These local tests plus the national ones are listed on the following pages. If you have any questions regarding the policies listed in this document, please contact the Novitas Solutions, Inc. Medicare Part B office at 877-252-8782.

Novitas Solutions, Inc. will not pay for the listed tests unless the claim is accompanied by an appropriate diagnostic code. For your convenience, we have developed this document from information published by Novitas Solutions, Inc. or CMS to provide you with a list of medically acceptable diagnostic codes for each of these tests.

So that we can properly bill the appropriate party or MAC, we ask that you include an ICD-10-CM diagnosis code on the test request form when ordering each of these tests for beneficiaries. We do ask that you include the specific ICD-10-CM code(s) rather than a descriptive diagnosis on each patient. It is critical that the diagnosis codes that you provide are consistent with those documented in the patient's record.

## **Determining Necessity of Advance Beneficiary Notice (ABN) Completion\***

**Diagnose.** Determine your patient's diagnosis.

1. **Document.** Write the diagnosis code(s) on the front of the requisition.
2. **Verify.** Determine if the laboratory test(s) ordered for the patient is subject to Local Coverage Determination or National Coverage Determination. This information can be located in the policies published by the MAC, CMS, or [www.LabCorp.com/MedicareMedicalNecessity.com](http://www.LabCorp.com/MedicareMedicalNecessity.com)
3. **Review.** If the diagnosis code for your patient **does not** meet the medical necessity requirements set forth by Medicare or the test(s) is being performed more frequently than Medicare allows, an ABN should be completed.

\*An ABN should be completed for all tests that are considered investigational (experimental or for research use) by Medicare.

## **Payment Denials and Advance Beneficiary Notices**

The Medicare program will allow the laboratory to bill the patient for denied limited coverage services only if an Advance Beneficiary Notice (ABN) is completed, signed and dated by the patient, and forwarded to the laboratory prior to testing. Please provide the signed ABN with the original order. It is the physician's responsibility to ensure that the beneficiary receives and signs an ABN to accept financial responsibility if Medicare does not pay for these services.

ABNs may be obtained from your LabCorp representative.

## **Policy Updates**

LabCorp will continue to provide you with information regarding specific coverage limitation policies of the MAC and CMS, in the event that new policies are issued or existing ones are changed or clarified.

Although all health care providers are being affected by these types of policies, we are very sensitive to the challenges these changes bring to you and your patients. Please be assured that we will continue to work to lessen the impact upon you and your patients.

Contact your local billing representative if you have questions regarding this information.

## Non-Covered ICD-10-CM Codes for All Lab NCDs

### Alpha Sort

Z62.21	Child in welfare custody	Z13.5	Encounter for screening for eye and ear disorders
Z56.4	Discord with boss and workmates	Z11.4	Encounter for screening for human immunodeficiency virus [HIV]
Z59.2	Discord with neighbors, lodgers and landlord	Z11.51	Encounter for screening for human papillomavirus (HPV)
Z02.9	Encounter for administrative examinations, unspecified	Z11.3	Encounter for screening for infections with a predominantly sexual mode of transmission
Z02.82	Encounter for adoption services	Z11.9	Encounter for screening for infectious and parasitic diseases, unspecified
Z36	Encounter for antenatal screening of mother	Z11.0	Encounter for screening for intestinal infectious diseases
Z02.83	Encounter for blood-alcohol and blood-drug test	Z13.220	Encounter for screening for lipid disorders
Z41.1	Encounter for cosmetic surgery	Z13.811	Encounter for screening for lower gastrointestinal disorder
Z02.71	Encounter for disability determination	Z12.6	Encounter for screening for malignant neoplasm of bladder
Z41.3	Encounter for ear piercing	Z12.10	Encounter for screening for malignant neoplasm of intestinal tract, unspecified
Z04.8	Encounter for examination and observation for other specified reasons	Z12.82	Encounter for screening for malignant neoplasm of nervous system
Z04.9	Encounter for examination and observation for unspecified reason	Z12.81	Encounter for screening for malignant neoplasm of oral cavity
Z02.0	Encounter for examination for admission to educational institution	Z12.79	Encounter for screening for malignant neoplasm of other genitourinary organs
Z02.2	Encounter for examination for admission to residential institution	Z12.89	Encounter for screening for malignant neoplasm of other sites
Z02.4	Encounter for examination for driving license	Z12.73	Encounter for screening for malignant neoplasm of ovary
Z02.6	Encounter for examination for insurance purposes	Z12.2	Encounter for screening for malignant neoplasm of respiratory organs
Z00.6	Encounter for examination for normal comparison and control in clinical research program	Z12.83	Encounter for screening for malignant neoplasm of skin
Z02.5	Encounter for examination for participation in sport	Z12.13	Encounter for screening for malignant neoplasm of small intestine
Z00.71	Encounter for examination for period of delayed growth in childhood with abnormal findings	Z12.0	Encounter for screening for malignant neoplasm of stomach
Z00.70	Encounter for examination for period of delayed growth in childhood without abnormal findings	Z12.71	Encounter for screening for malignant neoplasm of testis
Z02.3	Encounter for examination for recruitment to armed forces	Z12.72	Encounter for screening for malignant neoplasm of vagina
Z00.5	Encounter for examination of potential donor of organ and tissue	Z12.9	Encounter for screening for malignant neoplasm, site unspecified
Z46.1	Encounter for fitting and adjustment of hearing aid	Z13.21	Encounter for screening for nutritional disorder
Z00.01	Encounter for general adult medical examination with abnormal findings	Z13.820	Encounter for screening for osteoporosis
Z00.00	Encounter for general adult medical examination without abnormal findings	Z11.2	Encounter for screening for other bacterial diseases
Z04.6	Encounter for general psychiatric examination, requested by authority	Z13.818	Encounter for screening for other digestive system disorders
Z76.1	Encounter for health supervision and care of foundling	Z13.89	Encounter for screening for other disorder
Z76.2	Encounter for health supervision and care of other healthy infant and child	Z11.8	Encounter for screening for other infectious and parasitic diseases
Z02.79	Encounter for issue of other medical certificate	Z13.228	Encounter for screening for other metabolic disorders
Z76.0	Encounter for issue of repeat prescription	Z13.828	Encounter for screening for other musculoskeletal disorder
Z13.71	Encounter for nonprocreative screening for genetic disease carrier status	Z13.858	Encounter for screening for other nervous system disorders
Z02.89	Encounter for other administrative examinations	Z11.6	Encounter for screening for other protozoal diseases and helminthiases
Z00.8	Encounter for other general examination	Z13.29	Encounter for screening for other suspected endocrine disorder
Z41.8	Encounter for other procedures for purposes other than remedying health state	Z11.59	Encounter for screening for other viral diseases
Z40.8	Encounter for other prophylactic surgery	Z13.83	Encounter for screening for respiratory disorder NEC
Z13.79	Encounter for other screening for genetic and chromosomal anomalies	Z11.1	Encounter for screening for respiratory tuberculosis
Z02.81	Encounter for paternity testing	Z13.850	Encounter for screening for traumatic brain injury
Z02.1	Encounter for pre-employment examination	Z13.810	Encounter for screening for upper gastrointestinal disorder
Z41.9	Encounter for procedure for purposes other than remedying health state, unspecified	Z13.9	Encounter for screening, unspecified
Z40.01	Encounter for prophylactic removal of breast	Z76.81	Expectant parent(s) prebirth pediatrician visit
Z40.09	Encounter for prophylactic removal of other organ	Z59.5	Extreme poverty
Z40.02	Encounter for prophylactic removal of ovary	Z81.1	Family history of alcohol abuse and dependence
Z40.00	Encounter for prophylactic removal of unspecified organ	Z82.61	Family history of arthritis
Z40.9	Encounter for prophylactic surgery, unspecified	Z82.5	Family history of asthma and other chronic lower respiratory diseases
Z41.2	Encounter for routine and ritual male circumcision	Z82.1	Family history of blindness and visual loss
Z00.121	Encounter for routine child health examination with abnormal findings	Z84.81	Family history of carrier of genetic disease
Z00.129	Encounter for routine child health examination without abnormal findings	Z83.71	Family history of colonic polyps
Z13.4	Encounter for screening for certain developmental disorders in childhood	Z84.3	Family history of consanguinity
Z13.84	Encounter for screening for dental disorders	Z82.2	Family history of deafness and hearing loss
Z13.0	Encounter for screening for diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism	Z83.3	Family history of diabetes mellitus
Z13.88	Encounter for screening for disorder due to exposure to contaminants	Z83.2	Family history of diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism
		Z84.0	Family history of diseases of the skin and subcutaneous tissue
		Z84.1	Family history of disorders of kidney and ureter

## Services That Are Not Reasonable and Necessary — 83719, 0111T

### Coverage Indications, Limitations, and/or Medical Necessity

Inclusion of a service or procedure in this non-coverage LCD indicates that the service is considered to be not reasonable and necessary and claims reporting the service will be denied as such.

The Centers for Medicare and Medicaid Services (CMS) Internet-Only Manual (IOM) Publication 100-08, Chapter 13, Section 13.5.1 defines that in order to be covered under Medicare, a service shall be considered reasonable and necessary, and further, that when appropriate, a contractor shall describe the circumstances under which the service is reasonable and necessary as part of its Local Coverage Determination (LCD) process.

Section 1862(a)(1)(A) of the Social Security Act is the basis for the above manual citation, and is the fundamental determinant of the coverage of a specific service for a Medicare Beneficiary. Services considered not reasonable and necessary for the diagnosis or treatment of an illness or injury, or to improve the function of a malformed body member are excluded from this coverage.

A service that appears to meet the technical requirements for coverage may also be excluded if that service:

- is not generally accepted as safe and effective by the medical community
- is not supported in peer-reviewed medical literature
- is experimental or investigational (exception: routine costs of qualifying clinical trial services with dates of service on or after September 19, 2000 which meet the requirements of the Clinical Trials NCD are considered reasonable and necessary)
- is not medically necessary in a specific case, or for a specific medical diagnosis
- is furnished at a level, duration, dosage or frequency not appropriate for a specific patient or clinical condition
- is not furnished in a manner consistent with community standards of care
- is not furnished in a setting (place of service) consistent with the patient's medical needs and condition
- is furnished in a manner primarily for patient convenience or provider convenience
- is a device not approved for marketing by the FDA and is not included in an FDA approved IDE trial
- is a test or service now considered obsolete by the medical community, and replaced by more efficacious services

Please note that a new service is not immediately considered covered or medically reasonable and necessary with the issuance of either FDA approval or the issuance of a CPT code. The contractor reserves the right to review the safety and efficacy of the treatment in comparison to existing treatment, both in peer-reviewed literature and in clinical application before making a determination of local coverage. For very new or infrequently done services, there may be little available literature. If providers believe that any of the Category III codes have been proven safe and effective, those providers may request removal of the code from this list through the Novitas LCD Reconsideration Process. If a code is removed from the non-coverage listing, documentation to support its use in a particular situation should be submitted with the claim so that it may be evaluated on an individual consideration basis.

Investigative Device Exemptions (IDEs) involving Category III codes must follow the usual procedures of the Contractor for IDEs. When these services are provided in the context of an approved IDE, they will be considered reasonable and necessary.

Periodically, the contractor will add or remove services from this policy via the mechanism of the coverage advisory process, defined for the Contractor Advisory Committees (CACs) within the contract region, and other clinical experts as deemed appropriate by the CAC and the contractor's Medical and Policy Staff and through the Reconsideration Process.

### Services considered not reasonable and necessary:

The American Medical Association (AMA) develops Current Procedural Terminology (CPT) Category III codes to allow for data collection concerning the use of "emerging technology, services, and procedures." The creation of a CPT Category III code by the AMA neither implies nor endorses clinical efficacy, safety or the applicability to clinical practice. Because of the specific purpose these Category III codes serve, the contractor will initially consider the item, service, or procedure represented by these codes to be not reasonable and necessary.

Specific services considered not reasonable and necessary, per the following previous Novitas evaluations:

Lipoprotein, direct measurement; VLDL cholesterol (procedure code 83719) is considered a non-covered code. NCEP recommendations do not include monitoring of VLDL levels for treatment of elevated cholesterol as risk factors for coronary and vascular atherosclerosis.

### All procedure codes listed are considered not reasonable and necessary at this time.

83719	Assay of blood lipoprotein
0111T	Rbc membranes fatty acids

**Allergy Testing — 82785, 86001, 86003, 86005****LIMITATIONS:**

The following tests are considered not medically reasonable and necessary:

- Provocative testing other than those mentioned in the policy, which states: provocative tests for which there is limited or no evidence of validity include: the cytotoxic test, the provocation-neutralization procedure, electrodermal diagnosis, applied kinesiology, the 'reaginic' pulse test and chemical analysis of body tissues.
- Blood, Urine or Stool micronutrient assessments
- Qualification of Nutritional Assessments
- IgG (ELISA) test
- Environmental Cultures and Chemicals
- Live Cell Analysis
- Passive Transfer
- Rebeck Skin Window
- Leukocyte Histamine Release
- Metabolic Assessments
- General Immune System Assessments
- Secretory IgA (Saliva)
- Qualitative multi-allergen screen
- Food Allergenic Extract Immunotherapy
- Cytotoxic Food Testing

Quantitative multi-allergen screening (CPT86005) is a non-specific screen that does not identify a specific antigen. This is a screening tool and therefore not covered by Medicare.

**Utilization Guidelines**

In accordance with CMS Ruling 95-1 (V), utilization of these services should be consistent with locally acceptable standards of practice.

The number of tests performed should be judicious. All patients should not necessarily be tested for the same antigens.

In-vitro testing (CPT code 86003) is covered when medically reasonable and necessary as a substitute for skin testing; it is not usually necessary in addition to skin testing.

CPT code 86005 is considered screening and will be denied.

CPT code 86001 is considered not medically reasonable and necessary as it is considered experimental and investigational.

## Assays for Vitamins and Metabolic Function—82180, 82306, 82379, 82607, 82652, 82746, 83090, 83698, 84207, 84252, 84255, 84425, 84446, 84590, 84591, 84597, 84999, 85385, 86352

### Limitations

For Medicare beneficiaries, screening tests are governed by statute. Vitamin or micronutrient testing may not be used for routine screening.

Once a beneficiary has been shown to be vitamin deficient, further testing is medically necessary only to ensure adequate replacement has been accomplished. Thereafter, annual testing may be appropriate depending upon the indication and other mitigating factors.

The following tests are considered non-covered services:

- Assays of selenium (84255)
- Functional intracellular analysis (84999)
- Total antioxidant function (84999)
- Assays of vitamin testing, not otherwise classified\* (84591)

\*Note: Assays of vitamin testing, not otherwise classified (84591) is not covered since all clinically relevant vitamins have specific assays.

**Note:** This LCD imposes the following limitations to the tests addressed in this LCD. These limitations will support automated denials as follows:

- Noncovered as described above (84255, 84999, 84591)
- Diagnosis to procedure limitations only (86352)
- Frequency limitations\* only (82180, 84252, 84425, 84446, 84590, 84597)
- Diagnosis to procedure and frequency limitations\* (82306, 82652, 82379, 82607, 82746, 83090, 84207, 85385, 83698)

\*Note: Please refer to the "Utilization Guidelines" section for an outline of the frequency limitations. Frequency limitations do not establish medical necessity for all testing but does reflect how the medical community uses the tests. Patterns of billing will be monitored for potential utilization of these tests for screening purposes, either by use of a single test or multiple tests together.

**Note:** This LCD imposes diagnosis limitations that support diagnosis to procedure code automated denials. However, services performed for any given diagnosis must meet all of the indications and limitations stated in this policy, the general requirements for medical necessity as stated in CMS payment policy manuals, any and all existing CMS national coverage determinations, and all Medicare payment rules.

**Note:** The following CPT/HCPCS codes associated with the services outlined in this policy will not have diagnosis limitations applied at this time. See the "Utilization Guidelines" section for frequency limitations.

- 82180
- 84252
- 84425
- 84446
- 84590
- 84597

### Utilization Guidelines

In accordance with CMS Ruling 95-1 (V), utilization of these services should be consistent with locally acceptable standards of practice.

Medicare recognizes certain tests may exceed the stated frequencies. Should a denial occur, additional documentation can be submitted to support medical necessity. Payment for additional tests may be allowed in selected circumstances when, upon medical review, the medical necessity of additional services is demonstrated.

Following a review of utilization data at various percentiles of units billed per year, the following frequency limitations are established and are as follows:

82180 (Assay of ascorbic acid) 1 time per year  
 82306 (Vitamin d 25 hydroxy) up to 3 times per year  
 82379 (Assay of carnitine) up to 3 times per year  
 82607 (Vitamin b-12) up to 3 times per year  
 82652 (Vit d 1 25-dihydroxy) up to 2 times per year  
 82746 (Assay of folic acid serum) up to 3 times per year  
 83090 (Assay of homocysteine) 1 time per year  
 83698 (Assay lipoprotein pla2) 1 time per year  
 84207 (Assay of vitamin b-6) 1 time per year  
 84252 (Assay of vitamin b-2) 1 time per year  
 84425 (Assay of vitamin b-1) 1 time per year  
 84446 (Assay of vitamin e) 1 time per year  
 84590 (Assay of vitamin a) 1 time per year  
 84597 (Assay of vitamin k) 1 time per year  
 85385 (Fibrinogen antigen) up to 3 times per year  
 86352 (Cell function assay w/stim) frequencies not determined

**Note:** This LCD imposes utilization guideline limitations. Despite Medicare's allowing up to these maximums, each patient's condition and response to treatment must medically warrant the number of services reported for payment. Medicare requires the medical necessity for each service reported to be clearly demonstrated in the patient's medical record. Medicare expects that patients will not routinely require the maximum allowable number of services.

**Assays for Vitamins and Metabolic Function — 82180, 82306, 82379, 82607, 82652, 82746, 83090, 83698, 84207, 84252, 84255, 84425, 84446, 84590, 84591, 84597, 84999, 85385, 86352**

## Coverage Indications, Limitations, and/or Medical Necessity

The emergence of personalized laboratory medicine has been characterized by a multitude of testing options which can more precisely pinpoint management needs of individual patients. As a result, the growing compendium of products described as biomarkers requires careful evaluation by both clinicians and laboratorians as to what testing configurations are reasonable and necessary under the Medicare Act. There are a plethora of burgeoning tools, including both gene-based (genomic) and protein-based (proteomic) assay formats, in tandem with more conventional (longstanding) flow cytometric, cytogenetic, etc. biomarkers. Classified somewhat differently, there are highly-diverse approaches ranging from single mutation biomarkers to multiple biomarker platforms, the latter of which often depend upon sophisticated biomathematical interpretative algorithms.

The term “biomarker” refers to a broad subcategory of medical signs (i.e., objective indications of medical state observed from outside the patient) which can be measured accurately and reproducibly. Medical signs stand in contrast to medical symptoms, which are limited to indications of health or illness perceived by the patient. In 1998, the National Institute of Health (NIH), defined a biomarker as: “a characteristic that is objectively measured and evaluated as an indicator of normal biologic processes pathogenic processes, or pharmacologic response to a therapeutic intervention.”

This current LCD focuses upon selected testing in oncology, with some emphasis upon applying the revised 2016 CPT molecular coding format. The LCD primarily applies to molecular biomarker testing, but does involve some other types of related biomarker testing, such as proteomics.

There are separate Local Coverage Determinations (LCDs) that address other biomarkers, which include a multitude of assays which are not specifically discussed below. (Please refer to the Novitas website at [www.novitas-solutions.com](http://www.novitas-solutions.com) for a complete listing of LCDs.)

Local Medicare coverage of such biomarkers must be predicated upon four fundamental principles:

- First, the biomarkers must have proven clinical validity/utility (CVU).
- Second, to support the medical necessity of the service, there must be acceptance/uptake of specific testing into patient management. **It is essential that physicians be familiar enough with all specific biomarkers, which they order, such that all test results may become clinically actionable.**
- Third, providers managing oncological conditions must demonstrate that the use of biomarkers will be used to assist in the management/treatment of the beneficiary.
- Peer-reviewed full manuscript evidence is required to support combination panels for multiple biomarkers, particularly regarding their alleged composite clinical validity/utility. For example; such potential billing for multiple, diverse biomarkers (e.g., diagnostic/monitoring/prognostic/predictive) can only achieve medical necessity when it is clearly evident how each requested biomarker can be individually contributory.

It is useful to categorize oncology biomarkers into functional clusters which reflect both (1) The predominant intent of testing (with the caveat that individual assays may cross over into more than one category) and (2) The relative evidentiary expectations:

- Oncology Biomarkers Used for Diagnosis/Classification/Monitoring/Surveillance: These types of assays are supportable by case-control sensitivity/specificity studies, with appropriate designs in place to minimize the extent of bias and confounding.
- Oncology Biomarkers Used for Prognosis/Prediction: Oncology biomarkers used for prognosis/prediction (i.e., a predictive biomarker is associated with response [benefit] or lack of response to a particular therapy, relative to other available therapy, whereas a prognostic biomarker provides information on the likely outcome of the disease in an untreated individual).

There is a complex and diverse set of study methods which can drive the robust formulation of evidence for such esoteric testing, which are well-summarized by Deverka et al. at the Center for Medical Technology Policy, but there are currently NO standardized thresholds or benchmarks for evaluating the CVU/medical necessity of emerging biomarkers. However, the following sources (although not exhaustive and complete) may help support CVU when requesting

reconsideration for coverage of biomarkers that are not included in this LCD:

- FDA labeling documentation.
- National Comprehensive Cancer Network (NCCN) Biomarkers Compendium recommendations, particularly where Category 1 evidence is noted.
- Findings from well-established, independent technology assessments (e.g., Evaluation of Genomic Applications in Practice and Prevention (EGAPP), Agency for Healthcare Research and Quality (AHRQ), Blue Cross and Blue Shield Association Technology Evaluation Center (BCBSA TEC) and the Cochrane Collaboration).
- Other independent, objective evaluations or systematic literature reviews, which can substantively contribute to the evidence base, including, but not restricted to, emerging National Institutes of Health (National Cancer Institute) guidelines for the accrual of genomics/proteomics clinical validity/utility evidence. Although there is not a prescriptive format for such systematic reviews, the documentation (submitted to Novitas) for reconsideration purposes should include the following three elements:
  - Some type of recurring/periodic Committee structure, which is comprised of at least qualified biomathematicians/methodologists, molecular pathology laboratory specialists and relevant clinicians (e.g., oncologists).
  - Evidence of active sharing of the critical evaluations in a manner that enables sufficiently broad input into this process, and a feasibly wide acceptance of this process by representative molecular pathology stakeholders. There is no preference between such a Committee being based at a single site, or even rotating among several sites.
  - Transparency of the biomarker evaluations via minutes (or a summary of minutes).

## Covered Indications

### MOLECULAR TESTS

Covered clinical types of application(s) are identified below as diagnostic (DX), prognostic (PROG) or predictive (PRED).

- Colorectal Cancer
  - KRAS (12/13) - PRED of resistance to an anti-EGFR agent
  - KRAS codon 61 - PRED of resistance to an anti-EGFR agent
  - KRAS codon 146 - PRED of resistance to an anti-EGFR agent
  - NRAS - PRED of resistance to an anti-EGFR agent
  - BRAF - PRED of resistance to an anti-EGFR agent + DX (sporadic vs. Lynch syndrome)
  - PIK3CA - PRED of resistance to an anti-EGFR agent + PROG
  - for local recurrence
  - MSI by PCR - PRED of 5-FU resistance + DX
  - MLH1 promoter hypermethylation - PRED of 5-FU resistance + DX
  - mRNA (oncotype-Colon) – PRED for the recurrence risk for patients with Stage II colon cancer (CPT code 81525)
  - Hereditary colon cancer disorders (CPT codes 81435 and 81436)
  - Sept9 – (CPT code 81327)
- Non-Small Cell Lung Cancer (NSCLC)
  - EGFR - PRED of anti-EGFR response
  - KRAS (12/13) - PRED of anti-EGFR resistance
  - KRAS codon 61 - PRED of anti-EGFR resistance
  - KRAS codon 146 - PRED of anti-EGFR resistance
  - BRAF - PROG + PRED for anti-RAF inhibitor
- Melanoma
  - BRAF - PRED of response to Vemurafenib
  - KIT - PRED of response to Imatinib (TKI)
  - NRAS - PROG + PRED for anti-MEK inhibitor
- Brain
  - BRAF - PRED
  - EGFR - PRED
  - MGMT - PRED

- NRAS - PRED for Selumetinib
- PIK3CA - PRED
- RET - DX
- PAX8/PPARG- DX

ThyraMIR Thyroid miRNA classifier (aPCR based microRNA gene expression classifier) (PRED) evaluates the expression levels of 10miRNA genes within an FNA biopsy: miR-29b-1-5p, miR-31-5p, miR-138-1-3p, miR-139-5p, miR-146b-5p, miR-155, miR-204-5p, miR-222-3p, miR-375, and miR-551b-3p.

CPT code 81545, oncology Thyroid, provides gene expression analysis of 142 genes utilizing fine needle aspirate, algorithm reported as a categorical result. (Afirm - PRED).

ThyraMIR and Afirm services will be considered reasonable and necessary for patients with any of the following conditions:

- An indeterminate pathology on fine needle aspiration
- Patients with one or more thyroid nodules with a history or characteristics suggesting malignancy such as:
  - Nodule growth over time
  - Family history of thyroid cancer
  - Hoarseness, difficulty swallowing or breathing
  - History of exposure to ionizing radiation
  - Hard nodule compared with rest of gland consistency
  - Presence of cervical adenopathy
- Ovary/Fallopian Tube/Peritoneum
  - AKT1 - PRED for PI3K/AKT/mTOR inhibitors
  - BRAF - DX + PROG
  - KRAS - DX + PROG
  - MLH1 promoter hypermethylation - DX
  - MSI by PCR - DX
  - PIK3CA - PRED for PI3K/AKT/mTOR inhibitors
  - PTEN - PRED for PI3K/AKT/mTOR inhibitors
  - TP53 - DX + PROG
- Uterus
  - AKT1 - PRED for PI3K/AKT/mTOR inhibitors
  - BRAF - PRED
  - KRAS - PRED
  - MLH1 promoter hypermethylation - DX
  - MSI by PCR - DX
  - PIK3CA - PRED for PI3K/AKT/mTOR inhibitors
  - PTEN - PRED for PI3K/AKT/mTOR inhibitors + DX + PROG
  - TP53 - DX + PROG
- Urinary Tract
  - MSI by PCR - DX
  - MLH1 promoter hypermethylation - DX

• **Prostate**

The PROGENSA® PCA3 Assay (PRED) is an FDA-approved, automated molecular test (assay) that helps physicians determine the need for repeat prostate biopsies in men who have had a previous negative biopsy.

- Gastrointestinal Stromal Tumor
  - KIT - PRED for Sumatinib + DX
  - PDGFRA - PRED for Sumatinib + DX

• **Cancer of Unknown Primary (CUP)**

Molecular testing (via CPT code 81479), using the Rosetta Cancer Origin Test™ (PROG), is considered reasonable and necessary in the pathologic diagnoses of CUP when a conventional surgical pathology/imaging work-up is unable to identify a primary neoplastic site. Other applications of this technology are considered not reasonable and necessary and are considered investigational in the use of diagnosis of specific tumor types such as NSCLC and renal cancers.

TUO CTID (Cancer Type ID) (DX) represented by CPT code 81540 is considered reasonable and necessary in the pathologic diagnoses of CUP when a conventional surgical pathology/imaging work-up is unable to identify a primary neoplastic site. Other applications of this technology are considered not reasonable and necessary and are considered investigational in the use of diagnosis of specific tumor types such as NSCLC and renal cancers.

• **Leukemias and Lymphomas**

- Acute lymphoid leukemia (ALL)
  - BCR/ABL1 - DX
  - ABL1 (kinase domain) - PROG
  - IGH - DX
  - TCRB - DX
  - TCRG - DX
  - TP53 - PROG
  - MLL/AF4 - DX
  - E2A/PBX1 - DX
  - ETV6/RUNX1 - DX
- Acute myeloid leukemia (AML, and including acute promyelocytic leukemia): All PROG, except where noted below.

- Cytogenomic microarray analysis, or alternatively, a single nucleotide polymorphism (SNP) array for the same testing, is covered for the identification of various mutations. These tests are used in the diagnosis/prognosis of various hematological malignancies.
- Myeloma Gene Expression Profile (MyPRS) (PROG) isolates plasma cells from myeloma patients, extracts DNA, which is then subjected to MicroArray testing and application of validated software programs to identifying patterns of genetic abnormalities. Seventy highly predictive genes have been identified and correlated to myeloma early relapse. MyPRS gives a predictive risk signature as high-risk or low-risk at this time. A high risk score predicts a <20% three-year complete remission where as a low-risk predicts a five-year complete remission of > 60%. The predictive value for the stratification of therapeutic interventions allows these patients to be treated in a more personalized manner based on their own genetic profile.
 

This test is considered reasonable and necessary only after the initial diagnosis of multiple myeloma has been made and will be available to be used in the stratification of therapeutic interventions. It would be inappropriate to use this test as a diagnostic tool or as a monitoring device of ongoing therapy. Other testing is available for this function.

The coverage is set to include only two clinical settings:

  - Once after initial diagnosis is made (i.e., please use ICD-10-CM code C90.00). In the event MyPRS was not tested at diagnosis of myeloma and there is ongoing initial therapy with persistent disease, MyPRS can be done still as an initial test.
  - OR
  - If relapse has occurred and a change in the therapeutic modalities is contemplated (i.e., please use ICD-10-CM code C90.02).

Please refer to the Utilization Guidelines section of this policy for frequency limitations.
- Hereditary neuroendocrine tumor disorders (CPT code 81437) – Must include at least 6 genes with genomic sequence analysis NEX GEN including:
  - MAX
  - SDHB
  - SDHC
  - SDHD
  - TMEM127
  - VHL

Please refer to the Utilization Guidelines section of this policy for frequency limitations.
- Hereditary neuroendocrine tumor disorders; duplication/deletion analysis panel (CPT code 81438) – must include analysis for:
  - SDHB
  - SDHC
  - SDHD
  - VHL
- Prosigna breast cancer gene signature assay (PROG) (CPT code 0008M)

**Biomarkers for Oncology — 0008M, 81170, 81206, 81207, 81208, 81210, 81218, 81219, 81235, 81245, 81246, 81261, 81263, 81270, 81272, 81273, 81275, 81276, 81287, 81292, 81293, 81294, 81301, 81310, 81311, 81313, 81314, 81315, 81316, 81321, 81322, 81323, 81327, 81340, 81342, 81350, 81400, 81401, 81402, 81403, 81404, 81405, 81406, 81407, 81408, 81435, 81436, 81437, 81438, 81450, 81479, 81503, 81525, 81538, 81540, 81545**

## Background

Women with early breast cancer and up to 3 locally positive lymph nodes whose tumor is estrogen-receptor positive will usually receive anti-hormonal therapy such as tamoxifen or aromatase inhibitors. U.S. (NCCN) and international (St. Gallen) guidelines predicate the decision for adjuvant chemotherapy on the size and grade of the breast cancer and other factors including genomic assays that provide additional information on risk of recurrence (Hernandez-Ava et al., 2013). According to a 2014 review, “Prognostic factors provide an indication of whether a patient needs subsequent therapy.” (Paoletti & Hayes, 2014). Similarly, another 2014 review article states, “Efforts should be focused on reducing chemotherapy in patients unlikely to benefit.” (Rampurwala et al., 2014).

The PAM50 breast cancer gene signature test was developed in the late 1990s and initial studies showed a strong correlation with breast cancer recurrence and with complete pathologic response to neoadjuvant chemotherapy (Parker et al., 2009). While test results are reported on a scale of 1-100 as a Risk of Recurrence (ROR) score, the underlying algorithm is also able to classify cases into the luminal A and B, Her2neu, and triple-negative subtype classifications.

The Nanostring nCounter® nucleic acid analysis system replicates the PAM50 algorithm, as an FDA cleared kit, the Prosigna Breast Cancer Gene Signature Assay (FDA, 2013). The Prosigna package insert was most recently updated in January, 2015 (FDA, 2015) reflecting additional studies (Sestak et al., 2014). Notably, the Prosigna platform and the original PAM50 platform have a 0.997 correlation (Dowsett et al., 2013).

For the FDA, the Prosigna test was validated in a large population of post-menopausal, estrogen-receptor positive women based on 1,017 cases of the TransATAC study (Dowsett et al., 2013). The study showed a strong correlation with long-term breast cancer recurrence and added substantial additional prognostic information over a clinical treatment score based on standard clinical variables. This study was replicated in an independent population, also on the Prosigna test, using 1,620 samples from the ABCSG8 trial (Gnant, 2014). A separate analysis of these trials validated prediction of distant recurrence in years 5-10 after initial diagnosis (Sestak et al., 2014) and has been incorporated in the FDA labeling (FDA, 2015). The Prosigna test is issued as separate reports, consistent with FDA review and labeling, for node-negative and node-positive (1-3 node) populations. Analytic performance, precision, reproducibility, and analysis of the clinical validations are provided in the FDA labeling (FDA, 2013; FDA, 2015).

Clinical utility of this breast cancer gene signature has also been assessed. The study of Martin et al. (2015) showed a 20% decision impact on decisions for or against adjuvant chemotherapy in an all-comers population of 200 new cases of incident breast cancer, when Prosigna test information became available after all other clinical information had been considered. The net rates of selecting adjuvant chemotherapy for low, intermediate, and high risk cases was similar to that observed in a meta-analysis of Oncotype DX decision data (Carlson & Roth, 2013). Additional support for the use of these test results in treatment decisions comes from Parker et al. (2009), in which there was a strong association with neoadjuvant chemotherapy response. Low-scoring cases have a very low change of complete pathological response to neoadjuvant chemotherapy, while high-scoring cases approach a 50% chance of complete pathological response. The same findings have been observed for other breast cancer gene signatures based on prognostic algorithms (Chang et al., 2008).

Consistent with the FDA indications for use, this testing will be considered reasonable and necessary only for patients that meet the following criteria:

- Post-menopausal female with either
  - o ER+, lymph node-negative, stage I or II breast cancer; or
  - o ER+, lymph node-positive (1-3 positive nodes), stage II breast cancer.

## NON-MOLECULAR ASSAYS

- The VeriStrat® assay (CPT code 81538) is a mass spectrophotometric, serum-based predictive proteomics assay for NSCLC patients, where “first line” EGFR mutation testing is either wild-type or not able to be tested (e.g., if tissue might not be available). This test is a driver of therapy, most notably EGFR inhibitors such as erlotinib, and it has been validated by randomized controlled studies (Carbone et al. and Stinchcomb et al.) and physician uptake data (Akerley et al.) to support this particular coverage niche.

- This LCD does not address ALK and ROS1 FISH assays, which are indicated as predictive biomarkers for Crizotinib therapy, since they are currently covered assays. However, it is expected that non-molecular testing for these two biomarkers should provide adequate predictive information.
- FISH tests for bladder cancer are complex tests based on precision reagents, controls, and mathematical algorithms, all of which must be validated in clinical trials in order to support cutoff points for critical patient care decisions. Therefore, in each local physician's office or laboratory, this category of testing is not easily replicated by miscellaneous research use or ASR reagents. Novitas will consider the coverage of FISH test kits based on peer-reviewed literature and approved manufacturer claims.
- Although multiple bladder cancer FISH tests may be covered according to the above general criteria, UroVysion™ Bladder Cancer Kit [UroVysion™ Kit] will be considered medically reasonable and necessary only when performed according to the FDA label (Summary of Safety and Effectiveness Data, Food and Drug Administration, January 24, 2005) as follows:

The UroVysion Bladder Cancer Kit [UroVysion™ Kit] is designed to detect aneuploidy for chromosomes 3, 7, 17, and loss of the 9p21 locus via fluorescence in situ hybridization (FISH) in urine specimens from persons with hematuria suspected of having bladder cancer. Results from the UroVysion Kit are intended for use, in conjunction with and not in lieu of current standard diagnostic procedures, as an aid for initial diagnosis of bladder carcinoma in patients with hematuria and subsequent monitoring for tumor recurrence in patients previously diagnosed with bladder cancer.

- The OVA1™ proteomic assay (PROG) will be considered reasonable and necessary when performed according to the FDA label using CPT code 81503:
  - OVA1™ identifies some women who will benefit from referral to a gynecological oncologist for their surgery, despite negative results from other clinical and radiographic tests for ovarian cancer. If other test results suggest cancer, referral to an oncologist is appropriate even with a negative OVA1™ result.
  - OVA1™ should be used by primary care physicians or gynecologists as an adjunctive test to complement, not replace, other diagnostic and clinical procedures.
  - OVA1™ uses a blood sample to test for levels of five proteins that change due to ovarian cancer. The test combines the five separate results into a single numerical score between 0 and 10 to indicate the likelihood that the pelvic mass is benign or malignant.

OVA1 has been cleared by the FDA for women who meet all of the following criteria:

- Are over 18 years of age
- Have an ovarian mass
- Have surgery planned

It is not intended for ovarian cancer screening or for a definitive diagnosis of ovarian cancer. Interpreting the test result requires knowledge of whether the woman is pre- or post-menopausal.

- The Risk of Ovarian Malignancy Algorithm (ROMA™) is a qualitative serum test (PROG) that combines the results of HE4 EIA, ARCHITECT CA 125 II™ and menopausal status into a numerical score. ROMA™ is intended (per FDA clearance) to aid in assessing whether a premenopausal or postmenopausal woman who presents with an ovarian adnexal mass is at high or low likelihood of finding malignancy at surgery. ROMA™ will be considered reasonable and necessary for women who meet the following FDA labeling criteria:
  - Over age 18;
  - Ovarian adnexal mass present for which surgery is planned; and,
  - Not yet referred to an oncologist.

ROMA™ must be interpreted in conjunction with an independent clinical and radiological assessment. The test is not intended as a screening or stand-alone diagnostic assay.

**Biomarkers for Oncology — 0008M, 81170, 81206, 81207, 81208, 81210, 81218, 81219, 81235, 81245, 81246, 81261, 81263, 81270, 81272, 81273, 81275, 81276, 81287, 81292, 81293, 81294, 81301, 81310, 81311, 81313, 81314, 81315, 81316, 81321, 81322, 81323, 81327, 81340, 81342, 81350, 81400, 81401, 81402, 81403, 81404, 81405, 81406, 81407, 81408, 81435, 81436, 81437, 81438, 81450, 81479, 81503, 81525, 81538, 81540, 81545**

### **Limitations**

**Note:** Please refer to the indications for any restrictions specific to the various assays.

- Biomarkers not addressed in this LCD or any other Novitas LCD will be considered not reasonable and necessary unless specifically covered by national policy.
- Most genomic testing should be a once in a lifetime test. Documentation in the medical record should clearly support the need for repeat testing to include the following: recurrence of disease, change in behavior of disease, etc.
- Non-conventional methods of next generation sequencing (NGS), which can generate much more extensive genomic information than conventional techniques, are currently non-covered. NGS methods which provide more “intermediate” range information (e.g., in the 5-50 mutation range) may be performed in the laboratory, pending adequate quality control, such as CLIA certification, but the actual coding and billing will continue to follow the “one-at-a-time” biomarker approach based on this LCD.

For frequency limitations, please refer to the Utilization Guidelines section below.

**Notice:** This LCD imposes frequency limitations as well as diagnosis limitations that support diagnosis to procedure code automated denials. However, services performed for any given diagnosis must meet all of the indications and limitations stated in this policy, the general requirements for medical necessity as stated in CMS payment policy manuals, any and all existing CMS national coverage determinations, and all Medicare payment rules.

As published in CMS IOM 100-08, Chapter 13, Section 13.5.1, in order to be covered under Medicare, a service shall be reasonable and necessary. When appropriate, contractors shall describe the circumstances under which the proposed LCD for the service is considered reasonable and necessary under Section 1862 (a)(1)(A). Contractors shall consider a service to be reasonable and necessary if the contractor determines that the service is:

- Safe and effective.
- Not experimental or investigational (exception: routine costs of qualifying clinical trial services with dates of service on or after September 19, 2000, that meet the requirements of the Clinical Trials NCD are considered reasonable and necessary).
- Appropriate, including the duration and frequency that is considered appropriate for the service, in terms of whether it is:
  - Furnished in accordance with accepted standards of medical practice for the diagnosis or treatment of the patient’s condition or to improve the function of a malformed body member.
  - Furnished in a setting appropriate to the patient’s medical needs and condition.
  - Ordered and furnished by qualified personnel.
  - One that meets, but does not exceed, the patient’s medical needs.
  - At least as beneficial as an existing and available medically appropriate alternative

The redetermination process may be utilized for consideration of services performed outside of the reasonable and necessary requirements in this LCD.

### **Utilization Guidelines**

In accordance with CMS Ruling 95-1 (V), utilization of these services should be consistent with locally acceptable standards of practice.

The following tests will all be covered once per lifetime per beneficiary:

- CPT code 81437 – Hereditary neuroendocrine tumor disorders
- CPT code 81438 – Hereditary neuroendocrine tumor disorders; duplication/deletion analysis
- ThyraMIR and Afirma tests
- Should the unlikely situation of a second, unrelated thyroid nodule with indeterminate pathology occur, coverage may be considered upon appeal with supporting documentation
- CPT code 81540 TUO CTID (Cancer TYPE ID)

While some biomarkers have utility for testing once per lifetime, there are some tumor specific scenarios where repeat testing would be needed for assessment of response to therapy or to identify basis of disease progression. In cases with metastatic or recurrent tumors, repeat testing may be useful in determining further clinical management. Also, biomarkers such as BCR-ABL 1 fusion, PML-RARA fusion are useful in monitoring response to therapy and predict a response up to four times per annum.

**Biomarkers for Oncology — 0008M, 81170, 81206, 81207, 81208, 81210, 81218, 81219, 81235, 81245, 81246, 81261, 81263, 81270, 81272, 81273, 81275, 81276, 81287, 81292, 81293, 81294, 81301, 81310, 81311, 81313, 81314, 81315, 81316, 81321, 81322, 81323, 81327, 81340, 81342, 81350, 81400, 81401, 81402, 81403, 81404, 81405, 81406, 81407, 81408, 81435, 81436, 81437, 81438, 81450, 81479, 81503, 81525, 81538, 81540, 81545**

**Group 1:**

Medicare is establishing the following limited coverage for the colorectal cancer molecular biomarkers (also including the small intestine) listed below and for MAAA CPT code 81525, mRNA gene expression profiling by real time RT-PCR of 12 genes utilizing ffpe tissue, algorithm and report:

**Group 26:**

Medicare is establishing the following limited coverage for CPT code 81540 – TUO CTID (Cancer Type ID):

**Alpha Sort**

C22.3	Angiosarcoma of liver	C50.912	Malignant neoplasm of unspecified site of left female breast
D01.9	Carcinoma in situ of digestive organ, unspecified	C50.911	Malignant neoplasm of unspecified site of right female breast
D02.22	Carcinoma in situ of left bronchus and lung	C34.12	Malignant neoplasm of upper lobe, left bronchus or lung
D01.5	Carcinoma in situ of liver, gallbladder and bile ducts	C34.11	Malignant neoplasm of upper lobe, right bronchus or lung
D01.7	Carcinoma in situ of other specified digestive organs	C50.412	Malignant neoplasm of upper-outer quadrant of left female breast
D02.21	Carcinoma in situ of right bronchus and lung	C50.411	Malignant neoplasm of upper-outer quadrant of right female breast
C84.A7	Cutaneous T-cell lymphoma, unspecified, spleen	J91.0	Malignant pleural effusion
C82.57	Diffuse follicle center lymphoma, spleen	C84.97	Mature T/NK-cell lymphomas, unspecified, spleen
C80.0	Disseminated malignant neoplasm, unspecified	C85.27	Mediastinal (thymic) large B-cell lymphoma, spleen
C22.2	Hepatoblastoma	D03.51	Melanoma in situ of anal skin
C86.1	Hepatosplenic T-cell lymphoma	D03.52	Melanoma in situ of breast (skin) (soft tissue)
C22.0	Liver cell carcinoma	D03.59	Melanoma in situ of other part of trunk
C80.1	Malignant (primary) neoplasm, unspecified	C45.9	Mesothelioma, unspecified
C43.51	Malignant melanoma of anal skin	D49.4	Neoplasm of unspecified behavior of bladder
C43.59	Malignant melanoma of other part of trunk	D49.2	Neoplasm of unspecified behavior of bone, soft tissue, and skin
C43.52	Malignant melanoma of skin of breast	D49.6	Neoplasm of unspecified behavior of brain
C18.1	Malignant neoplasm of appendix	D49.3	Neoplasm of unspecified behavior of breast
C67.5	Malignant neoplasm of bladder neck	D49.0	Neoplasm of unspecified behavior of digestive system
C67.9	Malignant neoplasm of bladder, unspecified	D49.7	Neoplasm of unspecified behavior of endocrine glands and other parts of nervous system
C18.9	Malignant neoplasm of colon, unspecified	D49.512	Neoplasm of unspecified behavior of left kidney
C49.0	Malignant neoplasm of connective and soft tissue of head, face and neck	D49.59	Neoplasm of unspecified behavior of other genitourinary organ
C49.9	Malignant neoplasm of connective and soft tissue, unspecified	D49.89	Neoplasm of unspecified behavior of other specified sites
C76.0	Malignant neoplasm of head, face and neck	D49.1	Neoplasm of unspecified behavior of respiratory system
C64.2	Malignant neoplasm of left kidney, except renal pelvis	D49.511	Neoplasm of unspecified behavior of right kidney
C34.02	Malignant neoplasm of left main bronchus	D49.9	Neoplasm of unspecified behavior of unspecified site
C56.2	Malignant neoplasm of left ovary	C85.97	Non-Hodgkin lymphoma, unspecified, spleen
C22.9	Malignant neoplasm of liver, not specified as primary or secondary	C84.27	Other mature T/NK-cell lymphomas, spleen
C22.8	Malignant neoplasm of liver, primary, unspecified as to type	C22.4	Other sarcomas of liver
C34.32	Malignant neoplasm of lower lobe, left bronchus or lung	C22.7	Other specified carcinomas of liver
C50.512	Malignant neoplasm of lower-outer quadrant of left female breast	C85.87	Other specified types of non-Hodgkin lymphoma, spleen
C50.511	Malignant neoplasm of lower-outer quadrant of right female breast	C77.3	Secondary and unspecified malignant neoplasm of axilla and upper limb lymph nodes
C34.2	Malignant neoplasm of middle lobe, bronchus or lung	C77.4	Secondary and unspecified malignant neoplasm of inguinal and lower limb lymph nodes
C25.7	Malignant neoplasm of other parts of pancreas	C77.2	Secondary and unspecified malignant neoplasm of intra-abdominal lymph nodes
C34.82	Malignant neoplasm of overlapping sites of left bronchus and lung	C77.5	Secondary and unspecified malignant neoplasm of intrapelvic lymph nodes
C50.812	Malignant neoplasm of overlapping sites of left female breast	C77.1	Secondary and unspecified malignant neoplasm of intrathoracic lymph nodes
C25.8	Malignant neoplasm of overlapping sites of pancreas	C77.9	Secondary and unspecified malignant neoplasm of lymph node, unspecified
C34.81	Malignant neoplasm of overlapping sites of right bronchus and lung	C77.0	Secondary and unspecified malignant neoplasm of lymph nodes of head, face and neck
C50.811	Malignant neoplasm of overlapping sites of right female breast	C77.8	Secondary and unspecified malignant neoplasm of lymph nodes of multiple regions
C25.9	Malignant neoplasm of pancreas, unspecified	C79.51	Secondary malignant neoplasm of bone
C47.9	Malignant neoplasm of peripheral nerves and autonomic nervous system, unspecified	C79.52	Secondary malignant neoplasm of bone marrow
C47.0	Malignant neoplasm of peripheral nerves of head, face and neck	C79.31	Secondary malignant neoplasm of brain
C61	Malignant neoplasm of prostate	C78.5	Secondary malignant neoplasm of large intestine and rectum
C48.0	Malignant neoplasm of retroperitoneum	C79.02	Secondary malignant neoplasm of left kidney and renal pelvis
C64.1	Malignant neoplasm of right kidney, except renal pelvis	C78.02	Secondary malignant neoplasm of left lung
C34.01	Malignant neoplasm of right main bronchus	C79.62	Secondary malignant neoplasm of left ovary
C56.1	Malignant neoplasm of right ovary	C78.7	Secondary malignant neoplasm of liver and intrahepatic bile duct
C25.2	Malignant neoplasm of tail of pancreas	C79.49	Secondary malignant neoplasm of other parts of nervous system
C33	Malignant neoplasm of trachea	C79.89	Secondary malignant neoplasm of other specified sites
C34.92	Malignant neoplasm of unspecified part of left bronchus or lung	C78.6	Secondary malignant neoplasm of retroperitoneum and peritoneum
C34.91	Malignant neoplasm of unspecified part of right bronchus or lung	C79.01	Secondary malignant neoplasm of right kidney and renal pelvis
		C78.01	Secondary malignant neoplasm of right lung

### Coverage Indications, Limitations, and/or Medical Necessity

The emergence of personalized laboratory medicine has been characterized by a multitude of testing options which may more precisely pinpoint management needs of individual patients. As a result, the growing compendium of biomarkers requires a more careful evaluation by both clinicians and laboratorians as to what testing configurations can more optimally realize the promises of personalized medicine. There are a plethora of burgeoning tools, including both gene-based (genomic) and protein-based (proteomic) assay formats, in tandem with more conventional (longstanding) flow cytometric, cytogenetic, etc. biomarkers. Classified somewhat differently, there are highly-diverse approaches ranging from single mutation biomarkers to multiple biomarker platforms, the latter of which often depend upon sophisticated biomathematical interpretative algorithms. This policy will provide guidance on the broad range of (recently coded) biomarkers, and how such a wide array of testing platforms can be best accommodated by this local Medicare Administrative Contractor.

Medicare coverage for screening of those individuals with a family history of certain disease is covered only for a limited number of services as listed in the Section 280 – Preventative and Screening Services of the IOM 100-02, Medicare Benefit Policy Manual, Chapter 15.

Tests performed without relationship to treatment or diagnosis of a patient with no findings or history for a specific illness, symptom, complaint or injury unless set exclusion are so noted in Title 42 CFR, Section 411.15(a)(1).

Local Medicare coverage of such biomarkers must be predicated upon three fundamental principles:

First, there must be an underlying performance of acceptable, high-quality analytical validity for all such laboratory testing. As a result, the laboratory shall have available upon request:

- Analytical and clinical validation reports for Clinical Laboratory Improvement Amendments (CLIA), including the test description, intended use, and indications for testing.
- If applicable, all formal, written minutes and correspondences (including any Q & A and supporting documentation) with the New York State Department of Health (NYSDOH) or the US Food and Drug Administration.
- Most recent inspection results (including recommendations) or scheduled inspection(s) from CLIA, College of American Pathologists (CAP), or NYSDOH, as applicable.

Second, there must be an appreciation of evidence-in-transition where new biomarkers should be brought on-line in harmonization with their proven clinical validity/utility (CVU). Although analytical validity is an equally important metric, it remains more outside of a payer's purview to conduct such detailed evaluations. Therefore, in the absence of a standard CVU referee process (e.g., although FDA labeling of biomarkers can be a helpful adjunct, it may not always be relevant), the key imperative is for medical necessity to be reflected by the clear articulation of a particular biomarker niche.

Third, there must be a recognized decision impact of such biomarkers by the clinical community. In other words, there must be acceptance/uptake of specific testing into patient management. It should be taken into account that to reach the medical necessity threshold, such acceptance should be based on the strongest evidence available, ideally from along the spectrum of high-quality masked, randomized controlled clinical trials, and much less preferably from lower levels of evidence, which are predicated upon expert opinion only without primary study data.

Per above, it is relevant to categorize biomarkers into functional clusters which, in turn, can enable longitudinal coverage guidance that is most relevant to the Medicare program mission:

**The commercial availability does not ensure that a molecular diagnostic test is indicated for clinical application. Molecular diagnostic testing is a rapidly evolving science in which the significance of detecting specific mutations has yet to be clarified in many circumstances. Analytical and clinical validity as well as clinical utility are the responsibility of the provider, and all testing must meet standards of care.**

### Covered Indications

#### 1. GERMLINE (HEREDITARY) MUTATIONS

Medicare considers genetic testing medically necessary to establish a molecular diagnosis of an inheritable disease when all of the following criteria are met:

- The beneficiary must display clinical features of an associated disease, but noting that coverage of molecular testing for carrier status or family studies is considered screening and is statutorily excluded from coverage; and
- The result of the test will directly impact the treatment being delivered to the beneficiary; and
- A definitive diagnosis remains uncertain after history, physical examination, pedigree analysis, genetic counseling, and completion of conventional diagnostic studies.

The following table delineates the coverage status for various germline mutations, based upon the above bulleted principles. No procedure-to-diagnosis based limitations will be implemented for the germline mutations contained in the table, with the expectation that such sound principles of genetic counseling\* and testing have been implemented.

Germline Mutation	Coverage or Non-Coverage	CPT Code
DMD (dystrophin) (e.g., Duchenne/Becker muscular dystrophy) deletion analysis, and duplication analysis, if performed	Non-Covered	81161
Aortic dysfunction/dilation; genomic sequence panel	Non-Covered	81410
Aortic dysfunction/dilation; duplication/deletion analysis panel	Non-Covered	81411
Aspa gene	Non-Covered	81200
APC adenomatous polyposis coli full gene sequence	Covered	81201
APC known familial variants	Covered	81202
APC duplication/deletion	Covered	81203
Ashkenazi Jewish disorders	Non-Covered	81412
Bckdhh gene	Non-Covered	81205
Blm gene	Non-Covered	81209
Car ion chnlnpath inc 10 gns	Non-Covered	81413
Car ion chnlnpath inc 2 gns	Non-Covered	81414
Cftr gene com variants	Non-Covered	81220
Cftr gene known fam variants	Non-Covered	81221
Cftr gene dup/delet variants	Non-Covered	81222
Cftr gene full sequence	Non-Covered	81223
Cftr gene intron poly t	Non-Covered	81224
Cytogen microarray copy nmb; for copy number or cgh microarray analysis	Non-Covered	81228
Cytogen microarray copy nmb; for copy number and SNP variants	Non-Covered	81229

Msh2 gene full seq	Covered	81295
Msh2 gene known variants	Covered	81296
Msh2 gene dup/delete variants	Covered	81297
Msh6 gene full seq	Covered	81298
Msh6 gene known variants	Covered	81299
Msh6 gene dup/delete variants	Covered	81300
Mitochondrial gene	Non-Covered	81440
Whole Mitochondrial genome; genomic sequence	Non-Covered	81460

Germline Mutation	Coverage or Non-Coverage	CPT Code
Whole Mitochondrial genome; large deletion analysis	Non-Covered	81465
Mecp2 gene full seq(Rhettts)	Non-Covered	81302
Mecp2 gene known variant (Rhettts)	Non-Covered	81303
Mecp2 gene dup/delete variants (Rhettts)	Non-Covered	81304
Mthfr gene	Non-Covered	81291
Noonan Spectrum Disorders	Non-Covered	81442
Pms2 gene full seq analysis	Covered	81317
Pms2 known familial variants	Covered	81318
Pms2 gene dup/delete variants	Covered	81319
PMP22 gene analysis, duplication/deletion	Covered	81324
PMP22 full sequence analysis	Covered	81325
PMP22 known familial variants	Covered	81326
Smpd1 gene common variants	Non-Covered	81330
snrpn/tube3a gene	Non-Covered	81331
Serpina1 gene	Covered	81332
X-linked intellectual dblt; genomic sequence	Non-Covered	81470
X-linked intellectual dblt; duplication/deletion gene analysis	Non-Covered	81471

**Note:** The following two germline hereditary mutation tests will be considered medically necessary when performed for evaluation of venous thromboembolism. Please see ICD-10 Code group 3.

- Factor II (F2 gene)
- Factor V (F5 gene)

\* While not required for payment, NCCN Guidelines recommend referral to a cancer genetics professional with expertise and experience in cancer genetics prior to genetic testing and after genetic testing. Examples of cancer genetics professionals with expertise and experience in cancer genetics include: an American Board of Medical Genetics or American Board of Genetic Counseling certified or board eligible Clinical Geneticist, Medical Geneticist or Genetic Counselor not employed by a commercial genetic testing laboratory (excludes individuals employed by or contracted with a laboratory that is part of an Integrated Health System which routinely delivers health care services beyond just the laboratory test itself as these individuals are also considered independent); medical oncologist, obstetrician-gynecologist or other physician trained in medical cancer genetics, a genetic nurse credentialed as either a Genetic Clinical Nurse or an Advanced Practice Nurse in Genetics by either the Genetic Nursing Credentialing Commission (GNCC) or the American Nurses Credentialing Center (ANCC) who is not employed by a commercial genetic testing laboratory (excludes individuals employed by or contracted with a laboratory that is part of an Integrated Health System which routinely delivers health care services beyond just the laboratory test itself as these individuals are also considered independent).

## Biomarkers Overview — 81161, 81200-81205, 81209, 81220-81229, 81240-81244, 81250-81260, 81265-81268, 81288, 81290-81304, 81317-81332, 81355, 81370-81383, 81410-81431, 81434, 81439, 81440, 81442, 81460-81471, 81490, 81595

### 2. PHARMACOGENOMICS

The cytochrome P450 (CYP450) gene superfamily is composed of many isoenzymes that are involved in the metabolism of many medications. Although this superfamily has more than 50 enzymes, six of them metabolize 90% of clinically used drugs. Each cytochrome P450 gene is named with CYP indicating it is part of the cytochrome P450 family. CYP2C19 metabolizes at least 10% of all commonly prescribed drugs, whereas CYP2D6 enzymes metabolize approximately 20-25%, and CYP2C9 metabolizes approximately 10%.

Human CYP genes are highly polymorphic. As a result, polymorphisms are classified into four groups based on the level of CYP enzyme activity and include poor (abolished activity), intermediate (reduced activity), extensive (normal activity) and ultra-rapid metabolizers (enhanced activity). Genetic variability or polymorphism in these enzymes may influence a patient's response to commonly prescribed drug classes. The most pharmacologically and clinically relevant CYP polymorphisms are found in CYP2D6, CYP2C9, and CYP2C19. The genotypic rates vary by ethnicity.

#### A. CYP2C19 Genotyping

##### Background on CYP2C19 Testing

Genetic alterations or polymorphisms are common in these isoenzymes, with more than 30 polymorphisms identified in CYP2C19. These polymorphisms can lead to differences in individual drug response secondary to variation in metabolism.

The frequency of the various CYP2C19 metabolizer phenotypes has been estimated as follows:

- 2-15% - poor metabolizers
- 18-45% - intermediate metabolizers
- 35-50% - extensive metabolizers
- 5-30% - ultra-rapid metabolizers

Pharmacogenetic testing has been proposed to predict individual response to a variety of CYP2C19-metabolized drugs including clopidogrel, proton pump inhibitors, and tricyclic antidepressants, among others. In certain scenarios, an individual patient may benefit from genetic testing in determining dosage and likely response to specific medications.

Clopidogrel bisulfate (Plavix) is a widely prescribed medication to/for:

- Prevent blood clots in patients with acute coronary syndrome (ACS),
- Other cardiovascular (CV) disease-related events,
- Undergoing percutaneous coronary intervention.

Clopidogrel response varies significantly due to genetic and acquired factors including obesity, smoking and non-compliance. Patients with poor response to clopidogrel may experience recurrent CV event or thrombotic events while taking clopidogrel. They are at greater risk for major adverse CV events such as heart attack, stroke and death. These individuals are typically poor to intermediate metabolizers of clopidogrel due to the presence of the associated CYP2C19 polymorphisms. These individuals should be given an alternate treatment strategy (Plavix PI). As such, the clinical utility of CYP2C19 genotyping has been supported with net benefits on improving health outcomes for individuals with ACS who are undergoing percutaneous coronary interventions (PCI). There is insufficient evidence of clinical utility of CYP2C19 genotyping for individuals considering clopidogrel therapy for other indications.

With regards to CYP2C19 testing for antidepressant treatment, recent evidence has suggested genetic testing prior to initiating certain tricyclic antidepressants, namely amitriptyline, due to the effects of the genotype on drug efficacy and safety. Use of this information to determine dosing has been proposed to improve clinical outcomes and reduce the failure rate of initial treatment. However, the Clinical Pharmacogenetics Implementation Consortium did not have enough evidence to make a strong recommendation for dose modification based on genotype, and a moderate recommendation was given based on data outside of randomized trials. Additionally, even with genotype information, a suggestion is given to start patients on low dose, gradually increasing to avoid adverse side effects. Consequently, genotyping is not needed with this approach.

Proton pump inhibitors are used to treat several gastric acid-related conditions including duodenal ulcer, gastric ulcer and gastroesophageal reflux disease. Proton pump inhibitors can

also be used to treat *Helicobacter pylori*. Several proton pump inhibitors are metabolized by CYP2C19. However, there is insufficient data to warrant CYP2C19 genotyping to determine health outcomes or adverse drug reactions in treatment with proton pump inhibitors.

With regards to Serotonin reuptake inhibitors, there is insufficient evidence to support CYP2C19 genotyping to determine medical management for the treatment of obsessive compulsive disorder at this time.

This policy limits CYP2C19 (CPT code 81225) genetic testing to patients with ACS undergoing PCI who are initiating or reinitiating Clopidogrel (Plavix) therapy.

Genetic testing for the CYP2C19 gene is considered investigational at this time for all other indications including, but not limited to the following medications:

- Amitriptyline
- Clopidogrel for indications other than above
- Proton pump inhibitors
- Selective serotonin reuptake inhibitors
- Warfarin

#### B. CYP2D6 Genotyping

##### Background on CYP2D6 Testing

Genetic alterations or polymorphisms are common in these isoenzymes, with more than 100 polymorphisms identified in CYP2D6. These polymorphisms can lead to differences in individual drug response secondary to variation in metabolism.

Genetic variation, as well as drug-drug interactions, can influence the classification of CYP2D6 metabolism into one of the above phenotypes. In addition, chronic dosing of a CYP2D6 drug can inhibit its own metabolism over time as the concentration of the drug approaches a steady state.

Pharmacogenetic testing has been proposed to predict individual response to a variety of CYP2D6-metabolized drugs including tamoxifen, antidepressants, opioid analgesics, and tetrabenazine for chorea, among others. In certain scenarios, an individual patient may benefit from this genetic testing in determining dosage and likely response to specific medications.

##### Tamoxifen

Available evidence fails to support direct evidence of clinical utility for testing of CYP2D6 in treatment with tamoxifen. Tamoxifen metabolism and the causes for resistance are complex rather than the result of a single polymorphism.

##### Antidepressants

In regards to CYP2D6 testing for antidepressant treatment, there was insufficient evidence in the past to support testing to determine treatment. More recently, evidence has supported the use of genetic testing prior to initiating certain tricyclic antidepressants due to the effects of genotype on drug efficacy and safety. Use of this information to determine dosing can improve clinical outcomes and reduce the failure rate of initial treatment. However, there is insufficient evidence for CYP2D6 genotyping for individuals considering antipsychotic medications or other antidepressants with CYP2D6 as a metabolizing enzyme.

##### Codeine

In addition, the role of CYP2D6 genotyping has been evaluated for use in opioid analgesic drug therapy, specifically codeine analgesia. The efficacy and toxicity, including severe or life-threatening toxicity after normal doses of codeine has been linked to an individual's CYP2D6 genotype. However, genotyping would indicate avoidance of codeine due to risk of adverse events in only 1-2% of the populations, and there is considerable variation in the degree of severity of adverse events, with most not classified as serious. Furthermore, codeine is widely used without genotyping. At this time, there is insufficient evidence to support clinical utility of genotyping for management of codeine therapy.

**Biomarkers Overview — 81161, 81200-81205, 81209, 81220-81229, 81240-81244, 81250-81260, 81265-81268, 81288, 81290-81304, 81317-81332, 81355, 81370-81383, 81410-81431, 81434, 81439, 81440, 81442, 81460-81471, 81490, 81595**

### Tetrabenazine

The dosing of tetrabenazine is based, in part, on CYP2D6 genotyping. However, a recent study suggests that the necessity to genotype may need to be reconsidered. The manufacturer package insert indicates that poor metabolizers of CYP2D6 should not exceed a maximum dose of 50 mg/day.

### Drugs for Alzheimer's Disease

- Galantamine is an antimentia drug used in the treatment of Alzheimer's disease. Studies have been performed that reveal the CYP2D6 genotype significantly influences galantamine concentrations in blood. Still other studies have revealed that urinary assays for CYP2D6 phenotype are technically feasible. At this time, the association between phenotype and drug responsiveness remains unknown. It has been suggested that confirmation studies in larger populations are necessary to establish evidence regarding individuals most likely to benefit from galantamine, including information on treatment efficacy and tolerability.
- Donepezil (Aricept) is a drug used to treat Alzheimer's disease. Some studies have reported an influence of the CYP2D6 on the response to treatment with this drug. Other studies suggest that therapy based on CYP2D6 genotype is unlikely to be beneficial for treating Alzheimer's disease patients in routine clinical practice. Additional studies are needed to determine the efficacy and utility of CYP2D6 genotyping in those patients who are treated with donepezil.

### Covered Indications for CYP2D6

Genetic testing of the CYP2D6 gene is considered medically necessary to guide medical treatment or dosing for individuals for whom initial therapy is planned with:

- Amitriptyline or nortriptyline for treatment of depressive disorders
- Tetrabenazine doses greater than 50 mg/day, or re-initiation of therapy with doses greater than 50 mg/day

### Indications considered not reasonable and necessary for CYP2D6

There is insufficient evidence to demonstrate that genetic testing for the CYP2D6 gene improves clinical outcomes for the following medications. Consequently, genetic testing for the CYP2D6 gene is considered investigational for the following:

- Antidepressants other than those listed above
- Antipsychotics
- Codeine
- Donepezil
- Galantamine
- Tamoxifen

### 3. SOMATIC MUTATIONS, ONCOLOGY:

- Please Refer to LCD L35396, Biomarkers for Oncology.

### CYP2C9 Genotyping

- This policy does not address coverage with evidence development (CED) under section 1862(a)(1)(E). For CED coverage information related to CYP2C9 and VKORC1 for warfarin responsiveness please refer to the NCD for Pharmacogenomic Testing for Warfarin Response (90.1).

**Notice:** This LCD imposes frequency limitations as well as diagnosis limitations that support diagnosis to procedure code automated denials. However, services performed for any given diagnosis must meet all of the indications and limitations stated in this policy, the general requirements for medical necessity as stated in CMS payment policy manuals, any and all existing CMS national coverage determinations, and all Medicare payment rules.

13.5.1, in order to be covered under Medicare, a service shall be reasonable and necessary. When appropriate, contractors shall describe the circumstances under which the proposed LCD for the service is considered reasonable and necessary under Section 1862(a)(1)(A). Contractors shall consider a service to be reasonable and necessary if the contractor determines that the service is:

- Safe and effective.
- Not experimental or investigational (exception: routine costs of qualifying clinical trial services with dates of service on or after September 19, 2000 that meet the requirements of the Clinical Trials NCD are considered reasonable and necessary).
- Appropriate, including the duration and frequency that is considered appropriate for the service, in terms of whether it is:
  - Furnished in accordance with accepted standards of medical practice for the diagnosis or treatment of the patient's condition or to improve the function of a malformed body member.
  - Furnished in a setting appropriate to the patient's medical needs and condition.
  - Ordered and furnished by qualified personnel.
  - One that meets, but does not exceed, the patient's medical needs.
  - At least as beneficial as an existing and available medically appropriate alternative.

The redetermination process may be utilized for consideration of services performed outside of the reasonable and necessary requirements in this LCD.

### Utilization Guidelines

In accordance with CMS Ruling 95-1 (V), utilization of these services should be consistent with locally acceptable standards of practice, whereby more than once per lifetime testing is not deemed medically necessary, except under special clinical scenarios which will be handled through the redetermination process. The medical record must support the medical necessity of the increased frequency.

CPT code 81490, Autoimmune (rheumatoid arthritis), is limited to two services per rolling year per beneficiary.

The following CPT codes are non-covered: 81161, 81200, 81205, 81209, 81220, 81221, 81222, 81223, 81224, 81228, 81229, 81243, 81244, 81260, 81291, 81302, 81303, 81304, 81330, 81331, 81410, 81411, 81412, 81413, 81414, 81415, 81416, 81417, 81420, 81425, 81426, 81427, 81430, 81431, 81434, 81439, 81440, 81442, 81460, 81465, 81470, and 81471.
