### **CBD-Industry Innovation**

TACOMA, WASHINGTON – NeXtraction, Inc., today announced that its first breakthrough CBD product is available to consumer-product manufacturers: a full-spectrum acidic cannabinoid base ingredient.

Through its innovative water extraction technology, NeXtraction is positioned to be the industry's leading provider of naturally prevalent acidic cannabinoids for use in nutraceutical, cosmeceutical, pharmaceutical, food, beverage and animal-care products (as FDA allows).

One early customer, Michael Yucco of Resonant Botanicals, said he had been using CBD from traditional extraction methods in his product formulary but that he is now consistently using NeXtraction's acidic precursor phytocannabinoid base ingredient after a positive response from buyers of his topical cream.

"We expect significant interest from CBD-product makers as they become more aware of the importance of acidic cannabinoids. They are seeking new formularies beyond traditional CBD product lines," said NeXtraction president and co-founder Patrick Hyland. "We plan to continue aggressively scaling our water extraction technology. This includes achieving our next stage of system scale in time for the 2020 hemp harvest."

### **NeXtraction Process Technology**

In Tacoma this week, NeXtraction began full-scale operation at the industry's first commercial-scale industrial Water Extraction Technology™ (WET) system. Using water, NeXtraction's phytocannabinoid-extraction process offers a safer, environmentally friendly alternative to standard industrial hemp extraction methods (including cold ethanol and supercritical CO<sub>2</sub>). NeXtraction's WET™ system allows makers to take full advantage of essential acidic cannabinoids, such as CBDa (cannabidiolic acid) and CBGa (cannabigerolic acid), concentrated in a pure, full-spectrum base ingredient.

### **NeXtraction**

NeXtraction is a privately held triple-bottom-line, agri-tech company formed with an intentional devotion to environmental sustainability, social responsibility, and financial profitability.
