Spear One Solutions Announces the Launch of VERA—The AI-Powered Voice-Enabled Receptionist Assistant Redefining Business Communication

San Antonio, TX — December 9, 2025 — Spear One Solutions, a veteran-owned provider of AI-driven business automation and cybersecurity technologies, today announced the official launch of **VERA**, the **Voice-Enabled Receptionist Assistant**—a next-generation AI voice agent designed to transform how businesses handle incoming calls, scheduling, customer inquiries, and day-to-day front-office operations.

VERA is built to sound and behave like a real receptionist, providing businesses with a reliable, always-available team member who never misses a call. Powered by advanced conversational AI and integrated with modern communication platforms, VERA delivers a seamless and professional customer experience while reducing workload on office staff and improving response times.

“Businesses lose opportunities every time a call goes unanswered, and traditional automated systems feel cold, confusing, and outdated,” said **James H. Adams, Founder and Chief Innovation Officer of Spear One Solutions**. **“VERA changes that. She speaks naturally, handles tasks intelligently, and gives organizations—especially small and midsize businesses—the power of an on-demand receptionist who is available 24/7.”**

Key Features of VERA Include:

Natural, Human-Like Voice Interaction

VERA uses advanced voice AI to greet callers, answer questions, and route conversations in a way that feels personal and intuitive.

Smart Call Handling & Scheduling

From intake calls to appointment booking and information requests, VERA manages conversations end-to-end—freeing staff for higher-value tasks.

Customizable for Any Industry

Legal, medical, real estate, home services, consulting, and more—VERA adapts to the workflows and vocabulary of each business.

Seamless Integrations

VERA connects with major voice platforms (GoTo Connect, Twilio), CRM systems, scheduling tools, and communication suites like Microsoft 365.

Scalable, Affordable, Always-On Service

Unlike traditional staffing or call centers, VERA operates 24/7 at a predictable cost and scales instantly as the business grows.

A New Standard for Front-Office Efficiency

VERA is part of the growing **Project RADAR** ecosystem at Spear One Solutions—an expanding suite of practical AI tools built to help organizations automate repetitive tasks, enhance customer experience, and modernize operations without complexity.

“With VERA, we’re giving businesses a competitive advantage—an AI receptionist who never gets overwhelmed, never takes a day off, and always delivers a consistent customer experience,” Adams added. “This is not the future of communication. This is what customers expect today.”

Availability

VERA is available now in three editions:

- **VERA Basic** – Core call-handling and routing
- **VERA Pro** – Advanced workflows, scheduling, CRM integration
- **VERA Enterprise** – Compliance-ready features for law firms, healthcare, finance, and regulated sectors

Businesses can request a demo or begin onboarding at:
