

Facets All File

name_facets_all.txt: this contains colouring information for all the possible facets for the simulated crystal, between (-4,-4,-4) and (4,4,4) if layer colouring is enabled.

The format for the facets all file is identical to the facets found file, but with all possible planes within the crystal labelled rather than the small number detected in the final simulated crystal by *CrystalGrower* (saved to the facets found file).
