

Simulation Input File

name_input.txt: this contains information to run the simulation in terminal mode.

This file contains all the input data for *CrystalGrower* formatted so it can be read immediately into the program. The format will be identical to the input.txt discussed in the input files manual section. This file can be loaded by copying the file to the same directory as the *CrystalGrower* executable and renaming it to “input.txt” for the command line version of *CrystalGrower*. The *CrystalGrower* GUI can read in this file to quickly set up a simulation through a file explorer window.
