About Project One

The mentioned project is designed in 6 residential floors in a modern style. The material used in the facade of the building is a combination of stone, glass and iron. These materials have high resistance against environmental conditions in the cold mountain climate.

Also, the roof garden is designed to be used on the roof in summer.

About Second Project

Rolex residential project has 18 floors with 60 units, its penthouse has a pleasant atmosphere with a unique view of the city, and its parking space is automatic. There is also a green space, a gym and a tennis court in the area.

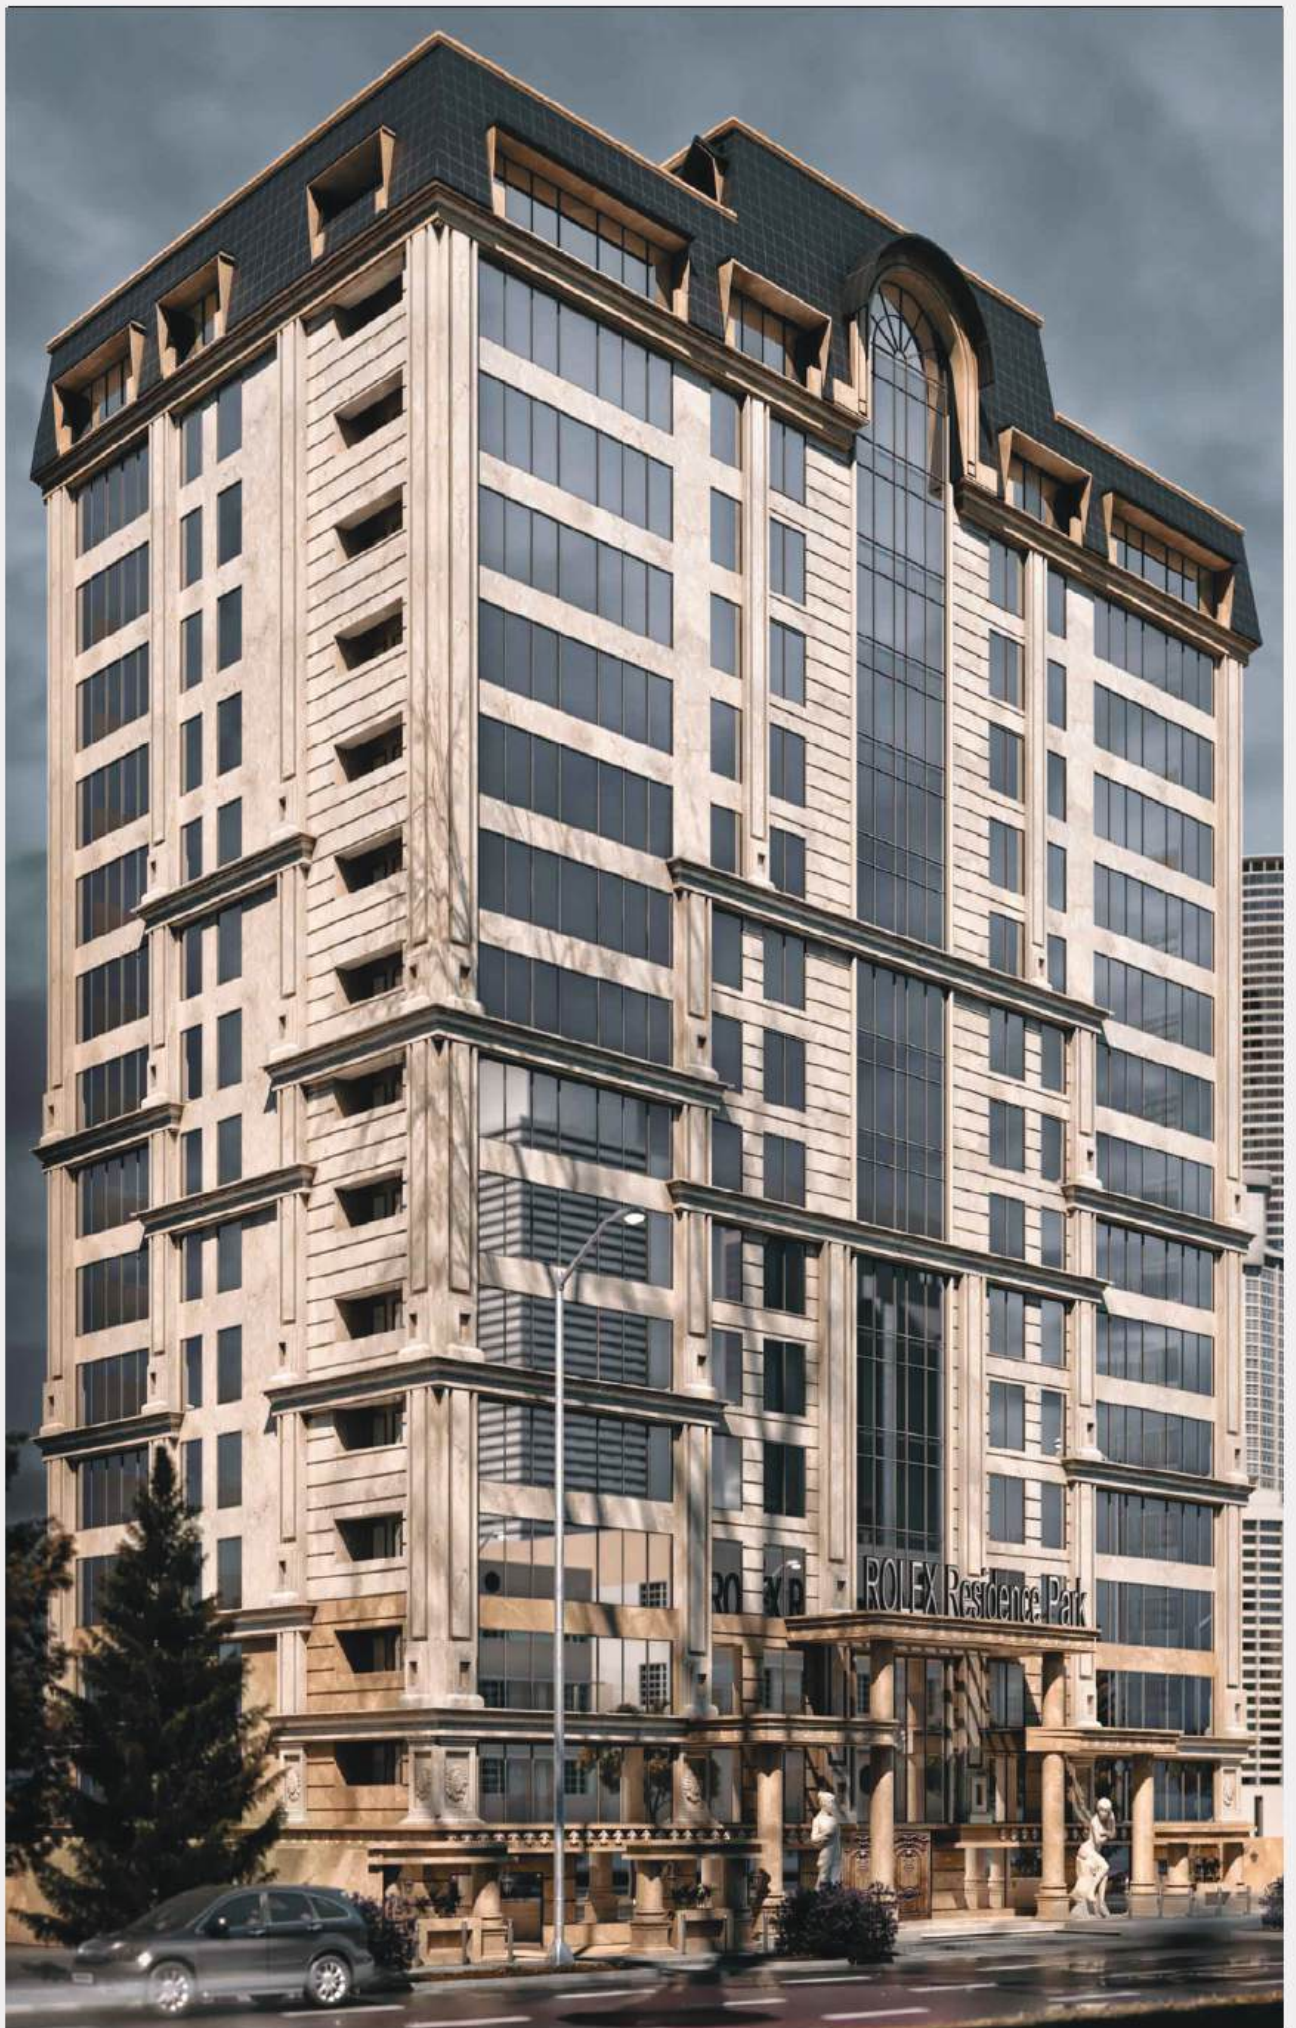

The mechanical system of the project is in the form of a roof-top unit on the roof, and the cooling and heating of the units is in the form of ductwork. Also, CCTV system and automatic intelligent fire alarm system are considered for all units.

About Third Project

The design of this three-story villa project was inspired by the lines and slope of the site plan. In the basement of the building, there is a covered swimming pool overlooking the garden pit with permanent natural light.

About Fourth Project

This project is the design of an architectural office in the historical context of the city. Therefore, in its interior design and material selection, it has been tried to use brick material, which was the dominant material of this traditional structure.

Taking a look at the original architecture of this city and also reducing the lighting costs, this project has been considered for nationwide windows, which are completely compatible with the administrative function of this project.

About Fifth Project

The design of the lobby of the Rolex residential tower is done in a classic style. The selected materials and furniture tend to be more classic style. In this style of design, the use of arches and prominent columns is more visible

About Sixth Project

A coffee shop and restaurant designed in a modern style in the beautiful city of Istanbul, where attention to summer and winter performance is reflected. A pleasant space with wooden materials that make people spend hours there.
