

GARDEN CITY NEW YORK MEDIA

bringing the community to you

**FUNERAL LIVE STREAMING
& RECORDING
PRODUCTION SERVICES**

739 Franklin Ave. Garden City, NY 11530

Book Us:: (516) 373-1515

- Garden City Studios Live Stream Services are available for funerals, corporate functions, birthdays, weddings, or any other event you can think of, enabling you to reach audiences around the corner, or around the globe. With the ability to stream from up to 8 high-definition cameras, even the largest events can be covered from many different angles and perspectives, complete with crystal clear audio.
- All our cameras are battery powered and fully wireless, therefore they can be placed just about anywhere. In addition, our mobile streaming camera allows us to capture any angle from anywhere, giving viewers a truly immersive experience.
- We can also record your event without Live Streaming and make the video available on a private link for download.

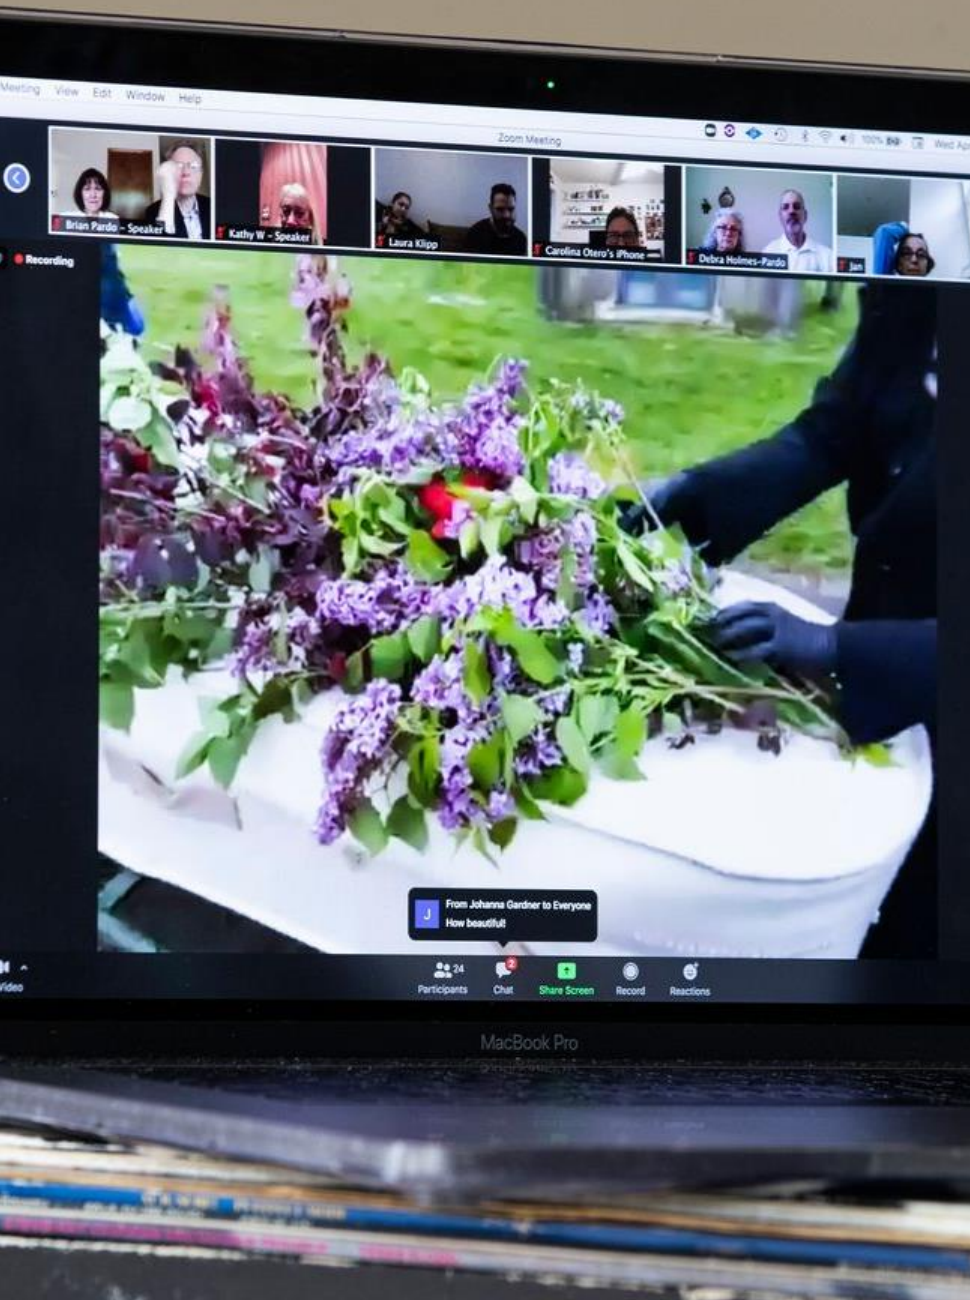

- Live Stream Cinema is the process of setting up multiple cameras and audio to broadcast any event to the internet. At Garden City Studios, we stream live to YouTube, Vimeo, or any platform you require. We create a cinematic look and feel and produce a finished film of the entire event with amazing sound and image clarity (Full HD 1080P). The event is then available to be downloaded from our Google drive for 4 weeks after the event. No one misses out.

WHY WE ARE DIFFERENT FROM OUR COMPETITION

- We have done our homework! We have looked at much of our competition and we believe we have a far superior product. When we looked at others, their video was often shakey, poor composition, started and ended abruptly and the audio was in most case, almost impossible to hear. It was full of echoes and very hard to understand. Their videos were very frustrating to watch and understand. It was simply not a quality product.
- Crystal clear, ultra high-quality audio is crucial to a successful Livestream.
- In contrast our films have crystal clear audio. Our films are clear and well composed. We constantly switch between four cameras with a front camera facing back into the crowd. No other Live streamer has this. We add a starting and ending scene to the films and we also add the persons name, D.O.B. & D.O.D. We like to think of our films as a precious memory of a life well lived. Like many other things, with Livestreaming you get what you pay for. We are reasonably priced for the quality of our work and we have passion for what we do.

LIVESTREAM FUNERAL SERVICES

- As Covid limits are placed upon funeral attendances, live streaming has become the norm for such events. At Cole Studios, our team can deliver the entire service as it happens, around the country or around the world. Using multiple cameras, we capture every moment, live. Audio is just as important, and we use a combination of personal (lapel) and fixed microphones to clearly capture even the quietest speaker as they deliver their eulogies. Using our mobile livestream camera, we even follow the casket out of the church and through the mourners until the hearse departs, allowing viewers maximum inclusion and experience. A finished film of the entire event will be made available on our secure Google Drive for anyone to watch or download within 24 hours of the service.
- We pride ourselves on being discreet and non-intrusive; being especially sensitive to the gravity of this day.

OUR CAMERA SETUP

- We have a rear camera that shows the crowd and the front of the service, a front camera that points back into the crowd to see the families and a third camera that zooms right into the speaker at the lectern. We can literally zoom from the other end of the room like we are standing right in front of the speaker. We stream live and direct to YouTube or any platform you require.
- We pride ourselves on being nonintrusive, blending in and we are especially sensitive to the gravity of this day.

THE FINISHED FILM

A finished film of the entire event will be made available within 24 hours of the service.

We use professional grade audio for crystal clear speeches and music.

Songs that are not clear or distorted are replaced with crystal clear versions (venue speakers are sometimes poor quality).

Our film is uploaded onto our secure Google Drive for anyone to watch or download.

The film is produced in 1080P high definition and has a starting and an ending placeholder of the event name.

We can password protect the film and have a hidden link so only the people that you want to see will see it.

CELLULAR SERVICE

4G/5G REQUIRED
TO LIVE STREAM

LIVESTREAM TECHNICAL REQUIREMENTS

- A Live Stream service is a very complex offering with many moving parts. We require a 4G/5G mobile phone signal to be able to Live Stream. From time to time, the signal may drop out and the stream cannot proceed. In these cases, we still record the entire event and will have the finished film available on our Google drive to download and watch within 4 hours of the function concluding (or the next morning for a night function). Clients should be fully aware of this possibility (although unlikely) before booking our services. We cannot always guarantee a good signal, and no signal means no Live Stream!

LIVESTREAM PRICING

- Every Live Stream has different requirements based on number of cameras required, staffing, travel, etc. For example, a three camera Live Stream includes two staff and a finished film of the entire event, but there's the optional Mobile Live Stream camera and drone (weather and permits allowing). A travel fee is incurred for distances greater than 20 miles from Garden City, NY.
- Please send us an email detailing your requirements so we can provide you with a competitive quote.

LIVESTREAM INCLUSIONS & EXCLUSIONS **

Our Live Stream service includes multiple cameras and professional audio. We also supply a finished film of the event following its conclusion. The film includes any music and slideshows that are played at the service.

The Live Stream service does not include setup and/or playing of AV presentations / music / audio / slideshows at the venue. This is a separate function to the Live Streaming service. AV services are usually handled by the venue. However, we can organize AV services at an additional cost; additionally, we require access to the venue prior to the day for setup and testing.
