

AC-20 Membrane Antiscalant

Advantech Aqua's AC-20 Membrane Antiscalant is a broad spectrum antiscalant, specially formulated for high levels of scale-forming minerals, metal oxides and silica. AC-20 Membrane Antiscalant is effective over a wide range of concentrations, and does not flocculate dissolved polymers such as residual coagulants, iron or silica.

Features

- Controls inorganic scale over a large concentration range
- Effective at controlling scale at levels up to 150+ grains of hardness
- Decreases precipitation of Iron, Aluminum and heavy metal salts
- Compatible with all RO, NF and UF membranes
- Effective against high levels of Silica
- Requires only 3-5ppm dosing in most applications
- 5 Gallon Pail treats up to 1,000,000 gallons of feed water
- Concentrated formula available
- Listed with CHEMTREC ALERT
- Made in the USA
