Times Table Tacular

$$5 \times 2 = 100$$

Keep it real!!

Directions: Roll two 12 sided dice (dodecahedrons). Compute the product. Put your color cube on one of the products on the times table game board. The winner is the player that gets 2 sets of 5 of their color cubes in a row. It can be diagonal, horizontal, or vertical. If your product has a cube on it, you lose your turn.
