

## ROLL + REMOVE

Directions: Decide which  $\frac{8}{4}$  dice to use for play. On your turn, roll both dice. Find the sum. Remove any number of chips that total the sum. If you don't have numbered chips, write 1-12 on your paper. Continue to roll and remove or cross out numbers until you roll a sum in which no chips or numbers can be removed. Your score for each round is the sum of the remaining chips. After  $\frac{6}{2}$  rounds, the player with the **LOWEST** score wins!!
