Key Benefits & Actions:

Fungal Control (Broad Spectrum): Effective against major fungal issues like powdery mildew, downy mildew, diplocorpan rosae, anthracnose, alternaria, leaf spots, late blight, and early blight.

Pest & Disease Control: Controls root knot Nematode, Fusarium, and Pythium in all plant types.

Systemic Action: Acts systemically within the plant.

Stress Relief: Helps plants survive high peak stress caused by frequent chemical usage.

Growth Promotion: Induces shoots during dormant or stunted growth stages.

Soil Health: Removes salt formation on the root zone (when drenched) and supports the uptake of other available nutrients.

Prevents Chemical Damage: Helps avoid necrosis, leaf burning, and scorches caused by heavy chemical doses.

Consistent & Durable Uptake: Elemental bacteria excreta ensures consistent and durable uptake by plants.

Yield & Quality Improvement: Consistent regular usage leads to improved yield, quality, and size of produce, especially for flower growers.

"Fertridge: Revolutionizing Organic Farming with Nano-Biotechnology"

Product Overview:

Nature: Nano technology-based, natural product, purest bacteria-based solution.

Origin: Netherlands, Europe.

Formulation: Suspension concentrate with high density liquid.

Particle Size: Less than 15 microns, allowing for faster absorption and good rain fastness.

Application: Can be sprayed on leaves, or applied through drip irrigation or drenching to roots (drenching provides major benefits). **Adjuvants:** Not required due to high spreadability

Target Crops:

Most effective for flowering crops, cucurbit crops,
and oil-producing crops.

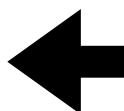

TOMATO, POTATO, ROSES, MARIGOLD, CHILLY,
CARROT, CHRYSANTHEMUM

DOSAGES:

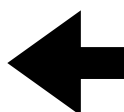

Spraying: 50-250gms/100 liters

Drenching: 0.5-1kg/acre

Drip irrigation: 0.5-1kg/200 liters
