Global Summer decorative pilasters

complete the authentic orangery look

Decorative pilasters are an eye-catching feature which evoke the classical period. They deliver an elegant finishing touch to the Global Summer orangery - the stylish design enhancement of Synseal's market leading Global conservatory roof. Manufactured in GRP they perfectly complement the roof, include self-draining flutes and are a beautiful addition to any raised line Global Summer installation.

The pilaster range includes 8 different product types:

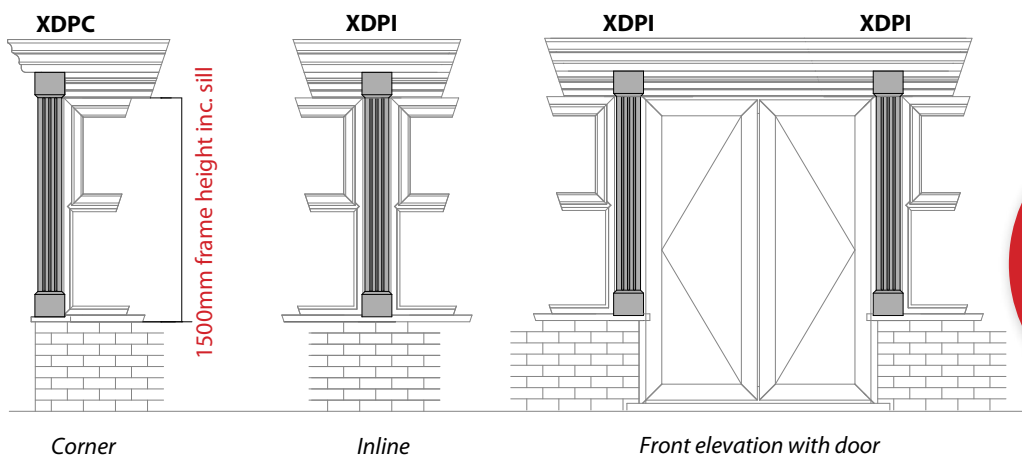

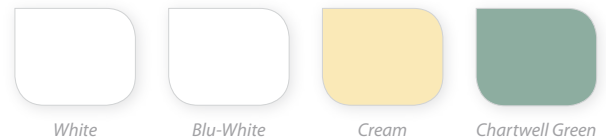

- 90° corner
XDPC
- 180° intermediate
XDPI
- Left and right wall
XDPWL
XDPWR
- Left and right wall with gutter downpipe cut out
XDPWLC
XDPWRC
XDPWLC-BG
XDPWRC-BG

(Please note: at this time there is no offering for a 135° Victorian corner. There is no full height pilaster option available)

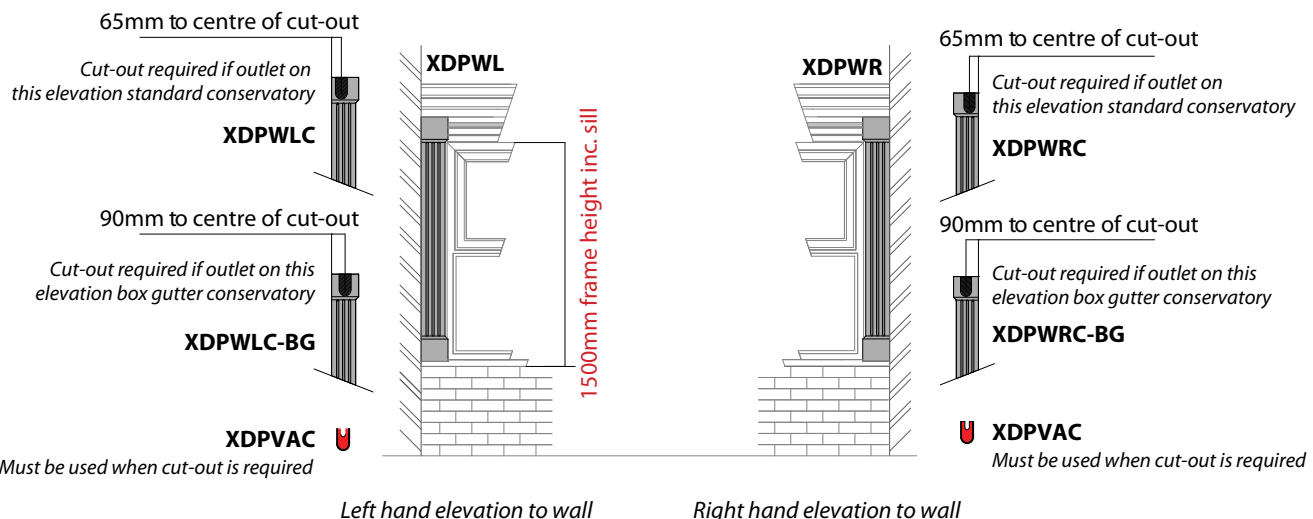

Colour options

The pilaster range comes in White painted finish as standard, available ex-stock.

Other colours are available on request, please contact us for more details.

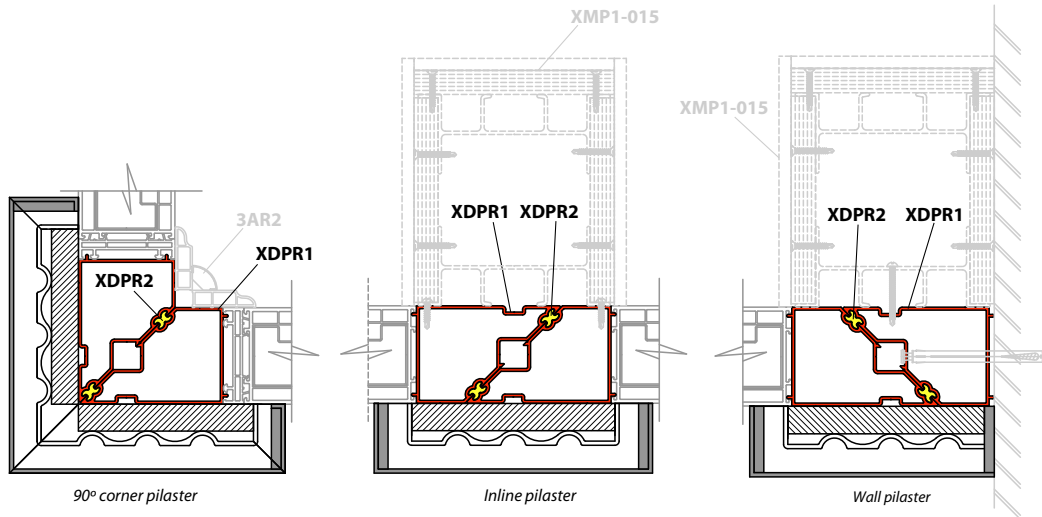

These pilasters are designed to suit the raised line orangery option and a 1500mm frame height including sill.

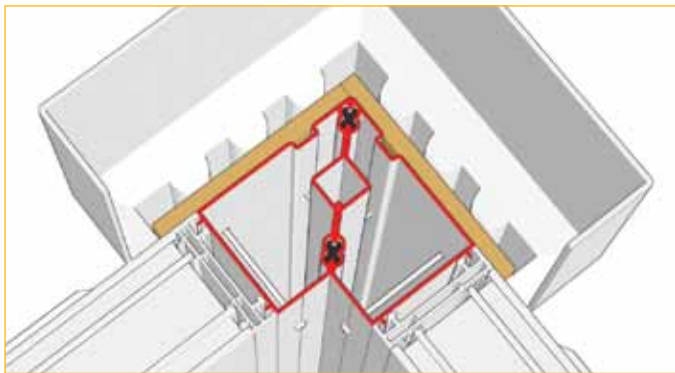

Fixings

Synseal are also offering an innovative two-part aluminium frame connector (XDPR1) that can be used to form either a 180° straight connector 140mm wide or a 90° corner (please note: a 15mm to 30mm frame add-on is required depending on outer frame size on the corners). The two part connector is coupled together with two strips of insert (XDPR2) which hold

the connector in alignment whilst it is screw fastened. Both connector and insert components are available in 3m lengths (these can be cut in half to form each finished connector). The GRP pilaster requires bonding onto the connector. Global Summer mullion pods (XMP1-015) and 45mm architraves (3AR2) are recommended for a perfect internal finish.

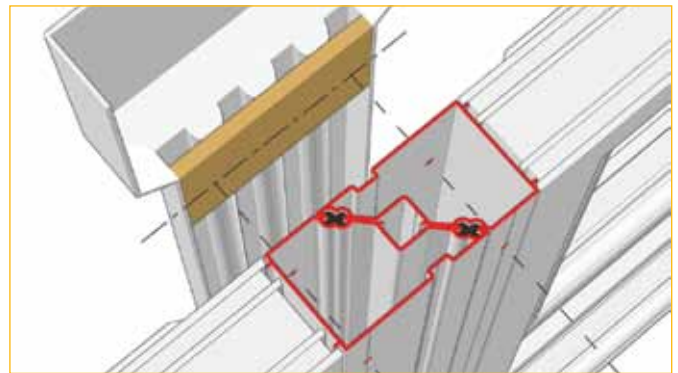

90° Corners

Detail showing the decorative pilaster reinforcing used to form a 90° corner.

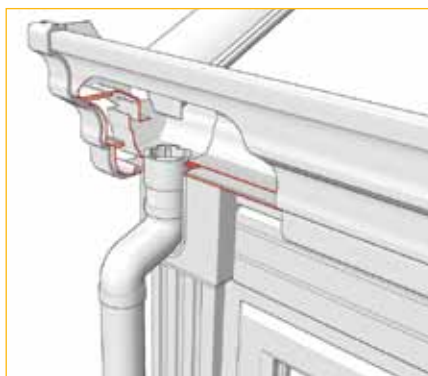

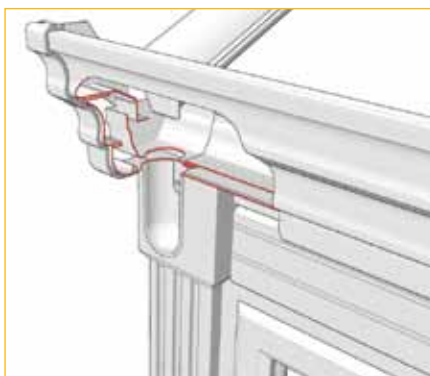

Inline

The decorative pilaster reinforcing helps ensure secure fixing. The increased I-value in comparison to a standard coupler or corner post also gives you the confidence that this product will provide excellent structural rigidity.

Pilaster downpipe detail

Global Summer pilasters are designed for use with raised line installations and are optionally available with pre-cut apertures to accommodate gutter downpipes where necessary. When used in conjunction with the pilaster aperture cover (XDPVAC) a perfect finish can quickly and easily be achieved. Pilasters with pre-cut apertures are available for both standard and box gutter configurations.
