FIRE
SAFETY**

Delta Fire Safety is a specialist fire safety company, proudly serving clients across the UK

About Us

Turn to our team of fire risk management consultants for complete fire safety requirements of your premises. In helping you to meet your legal requirements, Delta Fire Safety can undertake Fire Risk Assessments, PAS9980 surveys, Fire Compartmentation and Fire Door surveys, as well as delivering expert training courses.

As a respected & recognised fire risk management consultancy, we provide applied profiling & management solutions in accordance with British Standards, Building Regulations, & applied enforcement criteria.

Why Choose Us?

We provide compliance documents which identify significant risk, persons at risk, and all solutions necessary to remove or reduce risk to an acceptable level and on a designated timescale. Audited by numerous enforcing authorities, our fire risk assessment reports are considered to be of the highest standard and are "suitable and sufficient", as detailed in the Regulatory Reform (Fire Safety) Order 2005.

Fire Risk Assessment

Delta Fire Safety can attend and carry out a fire risk assessment, compiling a detailed report including any actions we would recommend to reduce the fire risk within your premises. This report can help you fulfil your statutory duty under the RR(FS)O as well as helping to reduce the risk of fire within your premises.

PAS 9980 Surveys

As an organisation we are market leaders in PAS 9980/External wall surveys. Our staff consist of Fire Engineers and surveyors, all with a wealth of subject knowledge. We also only work with the best contractors to undertake the opening up and making good, so you can rest assured the building will not be left in a worse state post-completion.

Compartmentation Surveys

Fire compartmentation is the subdivision of building into manageable areas of risk. This will help to prevent the spread of fire and smoke and provide adequate means of escape. A fire risk assessment will typically not include an extensive assessment of fire compartmentation in out-of-reach areas, such as above suspended ceilings, which is why a detailed compartmentation survey should be completed.

Fire Training

Delta Fire Safety provide specialist fire training courses, ranging from 1-hour CPD sessions to 5-day courses. All of our courses are delivered by industry-leading engineers and academics, ensuring the content provides solid theory along with up-to-date industry best practice.
