What is an Essential Oil?

- Extracts from Plants
- Found in the seeds, bark, stems, roots, flowers, and other parts of the plant
- Highly Concentrated (less is more)
- 50-70% more powerful than herbs

Why doTERRA?

When using Essential Oils safely with animals, they must be guaranteed 100% pure. doTERRA's 3rd party testing is unique in the industry and one that will guarantee purity. Every batch is rigorously tested for contaminants, toxins, adulterations, natural and artificial fillers.

Basic Guidelines:

Know your Pet: The species, age, size, health, and mannerisms will all determine which essential oils to use and how to properly use them with the animals.

Read Their Reaction: Introduce the Essential Oils to your pet first and read their reaction. If you notice that the animal shies away or avoids the oils, then that is a good indication that the specific oil is not for them.

Always Make a Positive Experience: Never force an essential oil onto an animal, as this will create fear and lead to a negative experience.

Aromatic Selection: Allow the animal to select which essential oil works best for them. Select three oils with similar benefits and allow the animal to sniff each bottle. Watch how the animal responds and engaged with each. Their body language will indicate which essential oil they prefer.

Always Dilute: When applying the essential oils topically onto the animals you always need to dilute them with a carrier oil such as Fractionated Coconut Oil (NOT WATER).

Escape Route: Never trap an animal in a room and diffuse. Always provide an escape route for the animal to take a break from the aroma. If you notice that the animal leaves the room each time you turn on the diffuser with a certain oil then that is a good indication that the oil is not mixing well with them.

Be Cautious: Use caution with animals that are pregnant, nursing, young, elderly, on medication.

Animals with bleeding disorders, avoid the following essential oils:

Birch Blue Tansy, Cassia, Fennel, Ginger, Oregano, Wintergreen.

Animals that are epileptic/prone to seizures avoid the following: Basil, Camphor, Eucalyptus, Fennel, Rosemary, Wintergreen, Clary Sage.

Animals that are pregnant avoid the following: Clove, Cypress, Eucalyptus, Ginger, Marjoram, Peppermint, Oregano.

Lactating Animals should avoid: Peppermint
