

In G-d We Trust, Earth

The goal, always withstanding, written thus: to actualize what's right. While doing the right thing seems right, what's really right is the right result. Accordingly, the overriding principle of this constitution proclamation will always be one in furtherance of progress: drafts charting a course toward the right result for the United States of America and the planet Earth.

To determine the right course of action, one must consider the reflected result that manifests from an originating action or inaction. Indeed, an idealistic beginning may already be in progress; it is the right result that constitutes what ultimately matters.

We live in a crowded world: all things are bound to bump into each other. In terms of humanity, people agree, people disagree, and people find a middle ground. Whether cultured by modern societies, or cultured indigenously, whether liberal or conservative, or whether Federalists or Democratic-Republicans, people undisputedly chart courses. Thus, as people living in the United States of America, on the planet Earth, the courses we chart must ultimately be able to find their way to the right result.

Now, what constitutes the right result? The right result means beneficial outcomes, resulting from the decisions and actions undertaken along a course of manifesting events, for humanity, for the United States of America, and for the planet Earth.

Written here and now, the above and the below in this document must be distinguished, and thus, here represents a written inflection point. Here states this proclamation's eternal, overarching ideology as well as its course forward. Forever harmonious with principles imbued in the United States Declaration of Independence and the Constitution of the United States of America, this proclamation states its unwavering intent to always abide by the above while drafting courses forward below.

We, "to assume among the powers of the earth, the separate and equal station to which the Laws of Nature and of Nature's God entitle" us, "hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty, and the pursuit of Happiness.--That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed," and, reserving "Justice," "domestic Tranquility," and the "common defense" explicitly to the branches of the national government and the state governments, we also promote the general welfare of Earth and "the Blessings of Liberty to ourselves and our Posterity." This is not subject to change. What's subject to change are written drafts that follow, ultimately constituting a charter aimed toward guiding the right result for the United States of America and the planet Earth.

The unchanging rationale for a dynamic and changing charter derives from the notion that what may get drafted for [the purposes of resulting in] the right result for Earth may shift or change according to the dynamics of changing and shifting conditions for [and on] Earth. With revisions, updates, additions, and subtractions, drafts reflect progress.

This hereby concludes the above.

[Draft 1A] Here begins portion Draft 1A. Another iteration, next or otherwise, may be identified as 2, (2.a.), {%%§}, et cetera ad infinitum. One may re-draft anew, write a wholly new party constitution, pursue a degree of harmonious continuity, delve into perverse speculations and formulations, or rationally and justifiably switch perspectives and directions entirely.

The purpose of 1A is to arrange a simple multiplex groundwork for manifold positive continuity, or beneficial results: primarily, by factoring in a continuity of incorporating already ongoing positive progress being made for Earth; primarily, by finding procedures involving mechanisms to determine future directions of possible positive continuity on Earth; and primarily, by ascertaining mechanisms to implement courses of action [or to initiate path directions] that bring positive continuity or lead to beneficial results for humanity, the United States of America and the planet Earth.

Finding ways to assess ongoing positive progress for Earth, as well as for determining directions of possible positive continuity on Earth along with courses of action or inaction that lead to beneficial results, may be done from metaphorical “top-down” approaches, “bottom-up” approaches, or approaches from somewhere in between. It’s a metaphorical view because top-down represents future-drawn backwards, bottom-up represents current or past-drawn forwards, and somewhere in between connotes instances in time from between the past or current and the current or future.

For positive continuity, or beneficial results, (A) a future “right result” stamp of approval, (B) current predictions of “right result” projections, or (C) possible “right results” drawn from the past and extrapolated to current or future “right results,” or some assemblage of (A), (B), and (C) thereof, capably amounts to such continuity, or results. Thus, generally, drawing from what’s right—past, present, or future—amounts to possibly beneficial prospective results.

For the benefit of planet Earth, the United States of America, and humanity, an obtainment of furthering progress, continuity, and beneficial results may be ascertained by [m]any number of ways, including an ascertainment of understandable mechanisms, determinative mechanisms, and methods[, each with the capability] to obtain the right result.

Certain methods to obtain the right result and certain determinative or understandable mechanisms could provide a groundwork to manifest and/or maintain beneficial courses of action or inaction.

In other words, “right result” pathways could become known by drawing from the past, present, and/or future, and thereby possibly ensure or generate progress, continuity, and beneficial outcomes for humanity, the United States of America, and the planet Earth.
