- Test Devices
- Sterilized Swab
- Extraction Tube
- Tube Stand
- Nozzle With Filter
- Sample Extraction Buffer
- Package Insert

What is COVID-19 (SARS-Cov-2) Antigen Rapid Test Cassette (Swab)?

The Novel Coronavirus (SARS-Cov-2) Antigen Rapid Test Cassette (swab) is used for the in vitro qualitative detection of novel coronavirus. The product is only used for auxiliary diagnosis of related cases and emergency reserve for in vitro diagnosis of this epidemic during the pneumonia epidemic infected by novel coronavirus (SARS-Cov-2) since December 2019 and it cannot be used as routine in vitro diagnostic reagents in clinical practice.

The detection results of this kit are for clinical reference only and should not be used as the sole criteria for clinical diagnosis. It is recommended to conduct a comprehensive analysis on the condition in combination with the clinical manifestations and other laboratory tests.

What is a Rapid Antigen Test?

Rapid antigen tests can be used for screening testing in high-risk congregate settings in which repeat testing could quickly identify persons with a SARS-CoV-2 infection to inform infection prevention and control measures, thus preventing transmission.

What does Antigen Test mean?

Antigen tests are immunoassays that detect the presence of a specific viral antigen, which implies current viral infection. Antigen tests are currently authorized to be performed on nasopharyngeal or nasal swab specimens placed directly into the assay's extraction buffer or reagent.

What COVID-19 tests are there?

Currently the three most frequently used tests are serum, saliva and 2 nasal swab test kits. Serum test requires a blood sample and thereby a Health Professional is recommended to administer. Saliva tests are easy but have poor efficacy test results. There are two nasal swab test kits, one uses inside bottom of nose (the one we offer) and the other is Nasopharyngeal Swab, which goes deeper into nasal cavity.

How long does the test take?

Once you open the kit and prepare the testing materials, the actual testing procedure and results can be obtained in less than 15 minutes. Actual specimen testing time is approximately 5-10 minutes to get a result.

Can test be administered anywhere?

Yes, virtually anywhere you can maintain the timing required for the test. We recommend any area that can support a table to lay out the test kit elements, and have them readily available to complete the procedure.

Is it safe?

Swab tests are designed to be quick, easy, accurate and safe. The proper use of the swab in entry part of the nose is a very low risk procedure. Additional video support using Passport™ makes it even easier.

Performance Characteristics

Clinical Analysis below is provided through 45 positive test specimens, collected from patients 1-5 days after symptoms onset with Nasal Swabs. The antigen test kits sensitivity and specificity were compared against and CE, FDA/EUA approved PCR test kit.

Sensitivity:

88.89%. Test measuring the portion of positives that are correctly identified (% of sick people who are correctly identified as having an illness)

Specificity:

99.05%. Test measuring The portion of negatives that are correctly identified (% of healthy people who are critically identified as not having an illness)

Accuracy:

96%. Results of testing representing the portion of true positive results, from both true positive and true negative results in the selected sampling.

Disclosure:

The test is under review by the FDA for approval by the FDA EUA. Results from Antigen testing should not be used as the sole basis to diagnose or exclude SARS-CoV-2 infection or to inform infection status.

EasyRapidNow COVID-19 Nasal Swab Antigen Test

Item # EASYRAPIDNOW

5+ tests = \$18 each; 250 – 5,000 = \$11.25 (Sold in boxes of 5 tests)
