

Irrigation set up and planting out

The following elements are recommended to make your garden grow and be beautiful. We do not guarantee prices and availability. Costs below are estimates; assume a typical bikebox of about 3800mm x 800mm, positioned at the front garden.

Materials

Irrigation £90

Recommended: a starter kit such as the following:

Gardena micro drip system – automated.

- Gardena Starter Set Plant Rows 15M
- Gardena Water Control Flex (9V battery – not supplied!)
- Gardena Connection Set

Soil/Compost £170

Recommended: a slow release fertiliser **multi-purpose** compost, suitable for planters and baskets – 800-1000 litres are required for our typical Bikeboxes, such as Miracle Gro enriched compost. This is easiest installed by bag (50l bags, for instance), rather than a bulk delivery with shovel, due to ease of getting it into the planter. Do not use topsoil or border soil.

Plants £280 ++

Recommended: a combination of perennials and bulbs, to be infilled with annuals. This is a matter of budget really - but you can expect that each plant will average out at about £10 each. We would suggest putting a budget against an initial plant out and then come back to it as the season progresses.

Ideas for planting are available on our Pinterest board: [Bikebox Garden Ideas](#)

Need help? We can provide the following additional services

Irrigation set up & Soil installation £280 + materials (compost/irrigation and plumbing accessories)

Setting up irrigation and prepping planter to accept plantings - getting the compost delivered and installed.

Plant selection & Planting out £580 + materials (plants)

Selecting, collecting and planting. Design consultation would be a matter of creating a 'mood board' based on images (eg Pinterest) to review the sort of thing that you would like to see, from there we are limited to availability.

All prices include VAT.
